

Lesson 7: Creating Interactive Dashboards and Data Stories

Aim:

- a) Design a basic dashboard layout using sheets
- b) Add filters and interactive controls
- c) Implement highlight and filter actions
- d) Use URL and set actions for interactivity
- e) Create dynamic dashboards using parameters
- f) Design dashboards for multiple devices
- g) Build a complete data story using Story feature

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

Before we begin building sheets for the layout in Part A:

1. Open Tableau Desktop.
2. Connect to matches.csv as your primary data source (or link matches.csv to deliveries.csv on id = match_id if using combined fields).

The screenshot shows the Tableau Desktop interface. On the left sidebar, under 'Connections', 'deliveries' is selected. Under 'Files', 'deliveries.csv' and 'matches.csv' are listed. The main workspace shows a relationship diagram with 'deliveries.csv' and 'matches.csv' connected by a line. Below this, a data preview table is displayed, showing columns from both tables joined together. The table has 7 columns: Id, Season, City, Date, Match Type, Player Of Match, and Venue. The data rows show matches from 2007/08 to 2008/08.

Id	Season	City	Date	Match Type	Player Of Match	Venue
335982	2007/08	Bangalore	18-04-2008	League	BB McCullum	M Chinnaswamy Stadium
335983	2007/08	Chandigarh	19-04-2008	League	MEK Hussey	Punjab Cricket Association S...
335984	2007/08	Delhi	19-04-2008	League	MF Maharoo	Feroz Shah Kotla
335985	2007/08	Mumbai	20-04-2008	League	MV Boucher	Wankhede Stadium
335986	2007/08	Kolkata	20-04-2008	League	DJ Hussey	Eden Gardens
335987	2007/08	Jaipur	21-04-2008	League	SR Watson	Sawai Mansingh Stadium
335988	2007/08	Hyderabad	22-04-2008	League	V Sehwag	Rajiv Gandhi International St...
335989	2007/08	Chennai	23-04-2008	League	ML Hayden	MA Chidambaram Stadium, ...

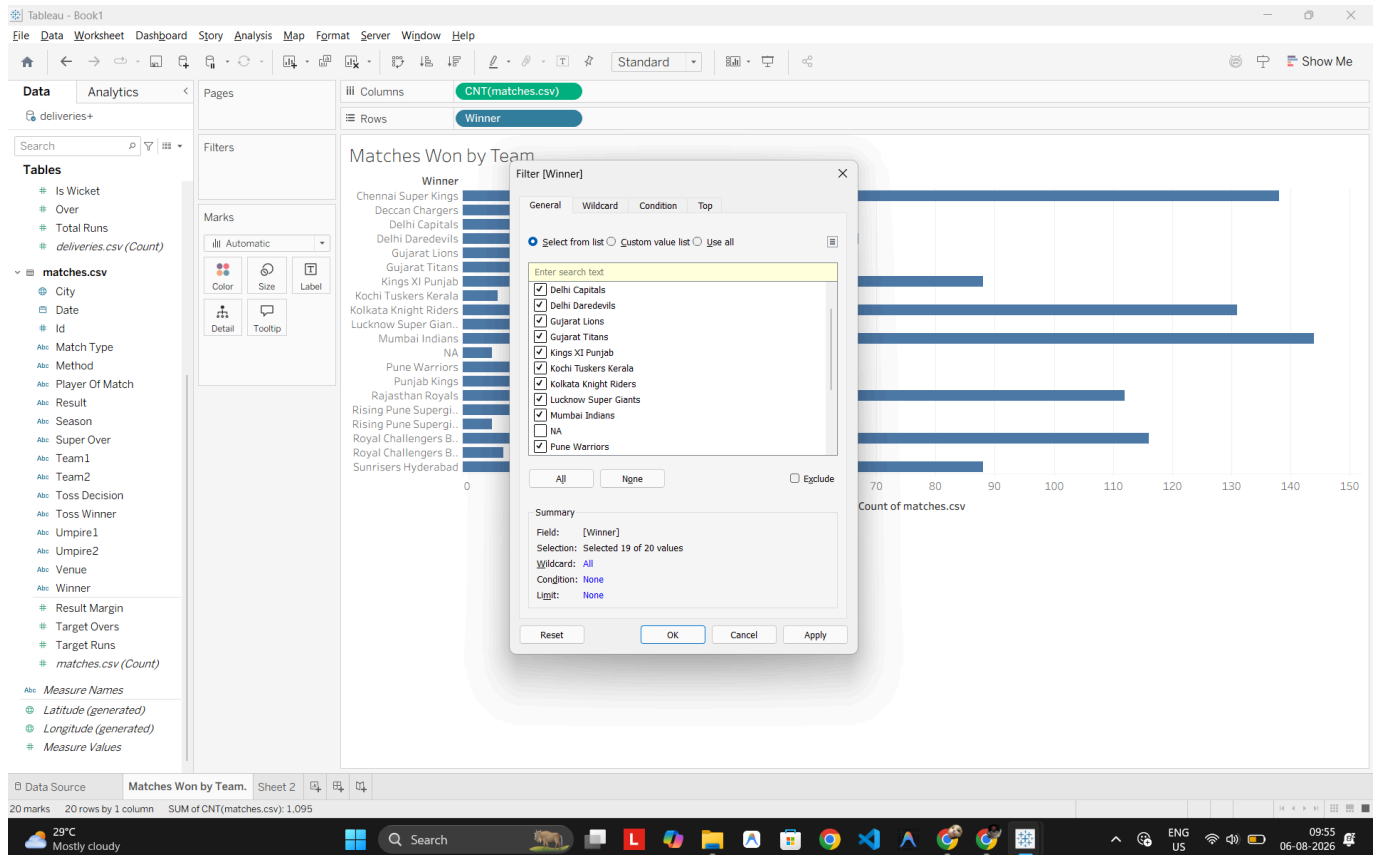

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

A: Design a basic dashboard layout using sheets

In this part, we will build 3 individual worksheets in Tableau using your matches.csv dataset, and then assemble them into a structured, tiled dashboard layout using containers.

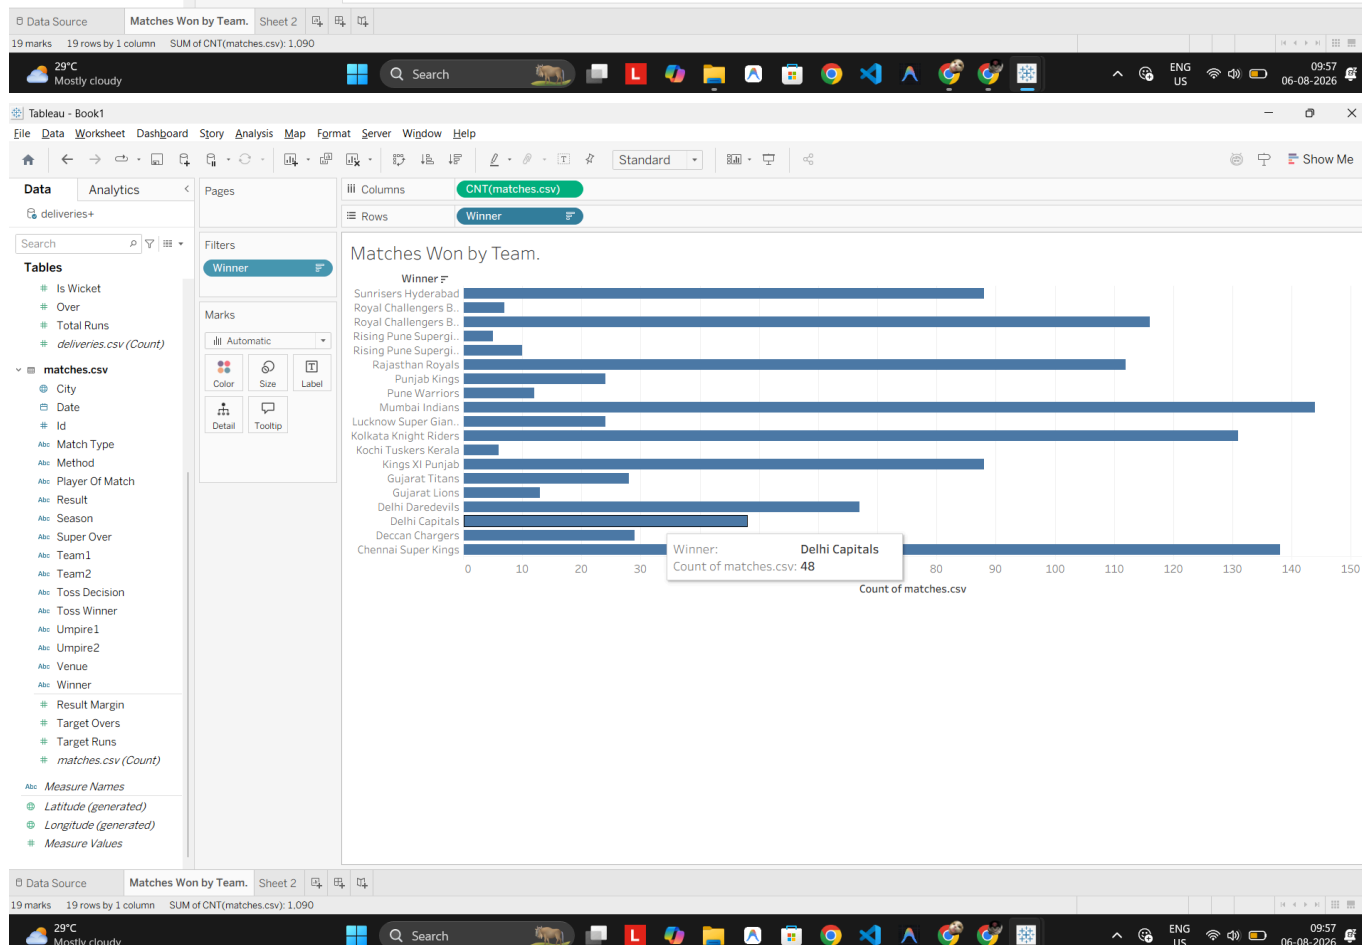

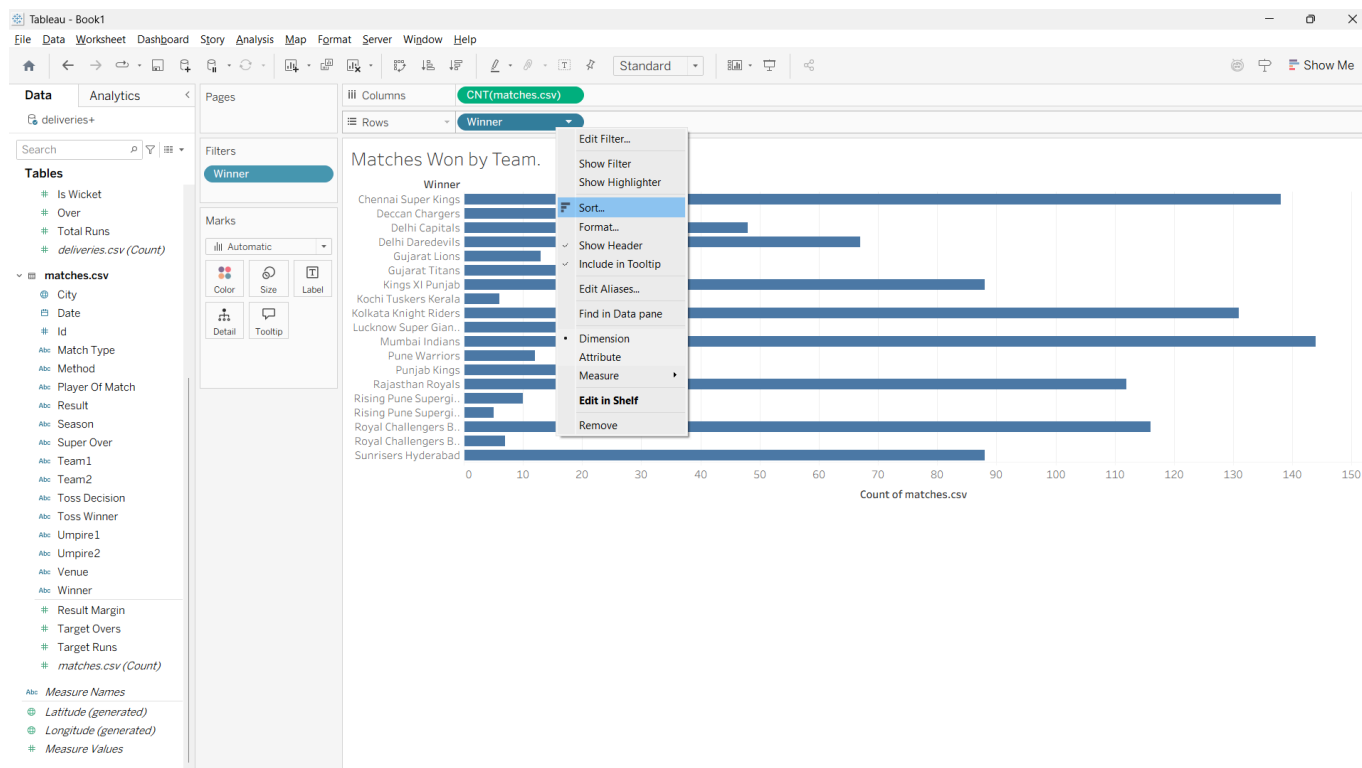

Step 1: Create Sheet 1 — "Match Winners by Team" (Bar Chart)

1. Open a new worksheet and rename it: Matches Won by Team.
2. Drag Winner from Dimensions to the Rows shelf.
- o Quick Filter: Drag Winner to the Filters shelf and uncheck Null (to clear matches with no result/abandoned).
3. Drag Matches (Count) (or Id using measure CNTD) to the Columns shelf.

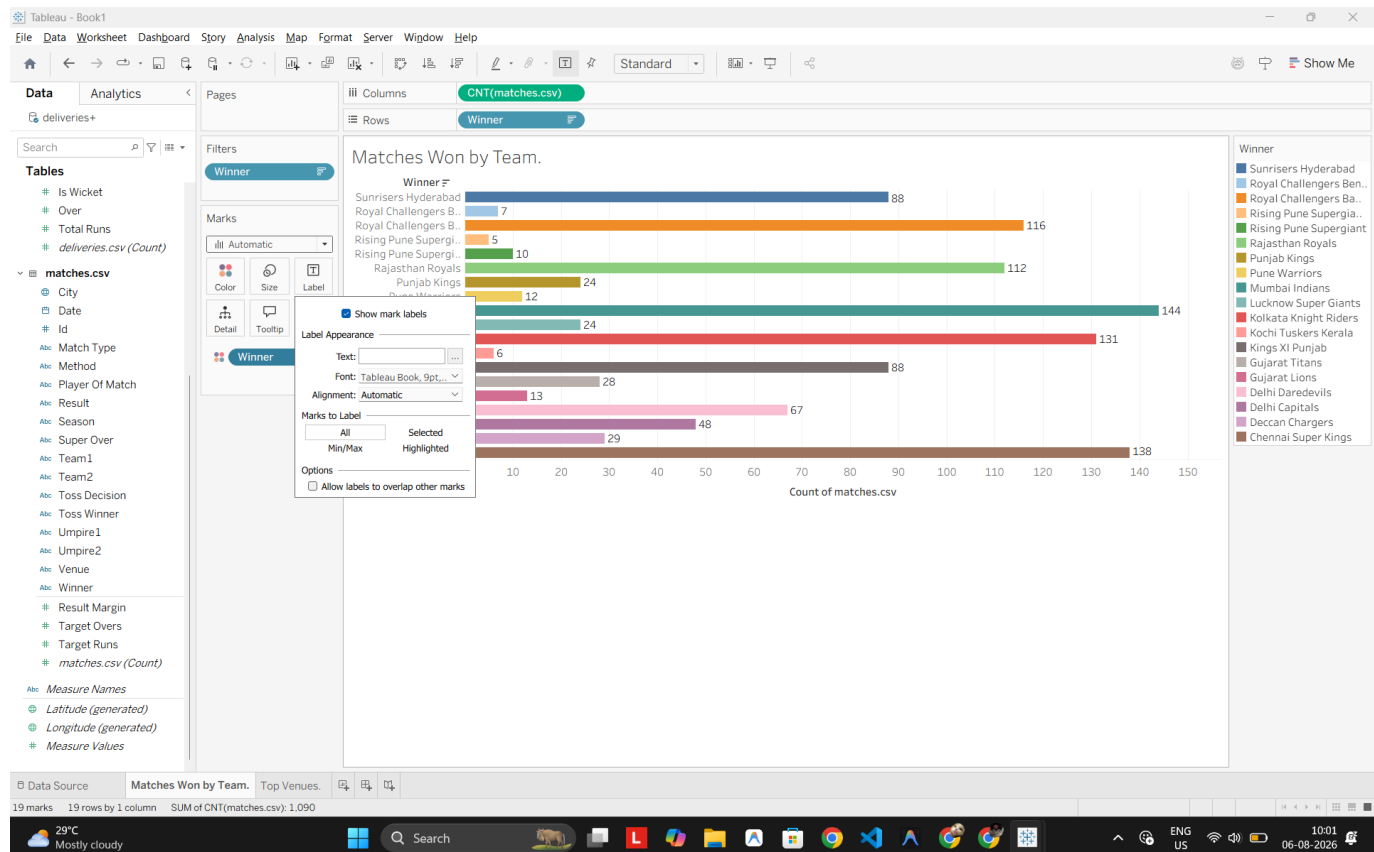

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

4. Click Sort Descending on the top toolbar so the team with the most wins (e.g., Mumbai Indians) appears at the top.

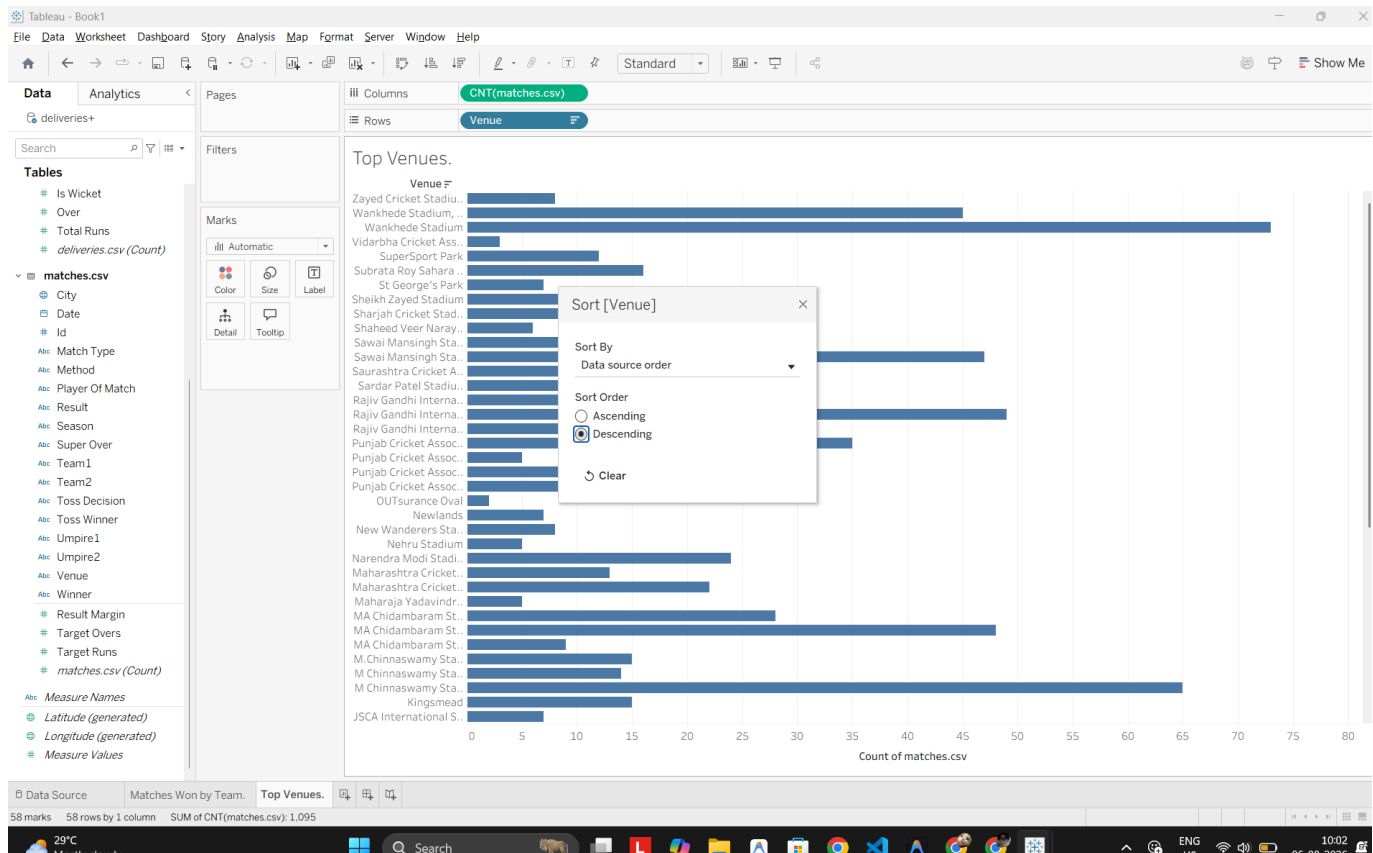

5. Drag Winner to Color on the Marks card to give each team its distinct color.

6. Click Label on the Marks card Check Show mark labels.

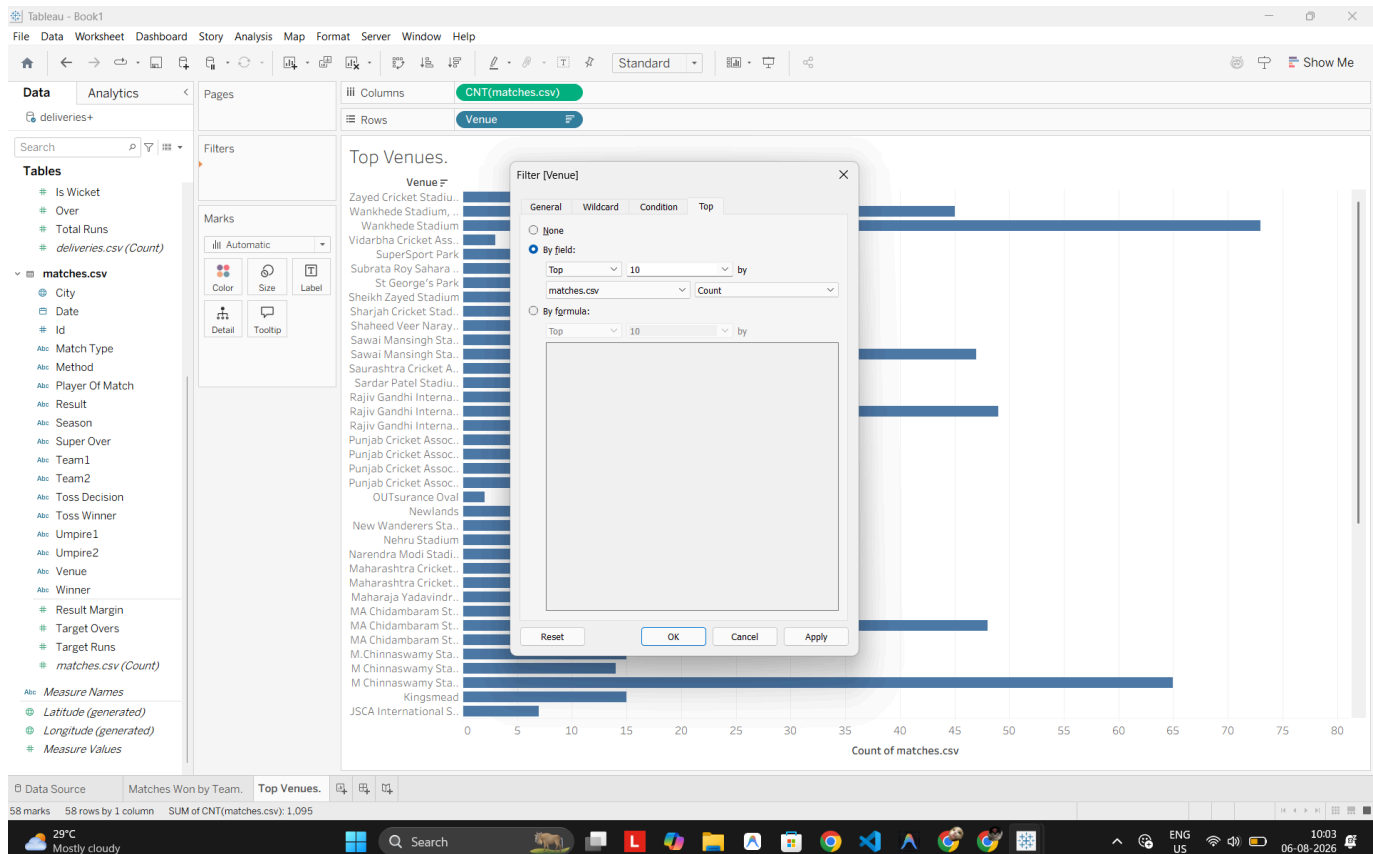

Step 2: Create Sheet 2 — "Top Match Venues" (Horizontal Bar Chart)

1. Open a new worksheet and rename it: Top Venues.
2. Drag Venue to the Rows shelf.
3. Drag Matches (Count) (or Id using CNTD) to the Columns shelf.
4. Sort in Descending order (Left Click on Venue on The Rows and Navigate to Sort).

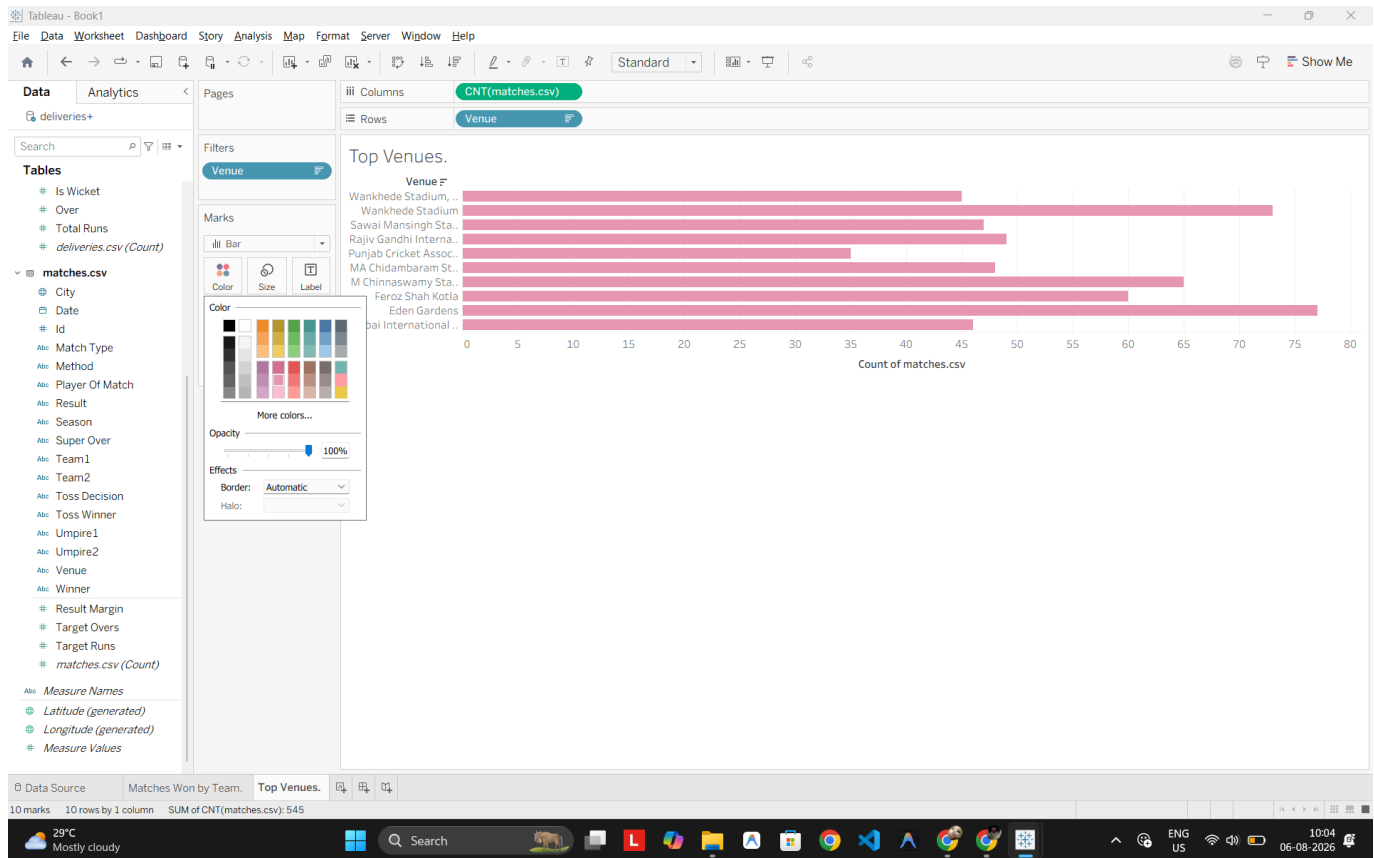

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

5. Drag Venue to the Filters shelf, go to the Top tab  select By field  Top 10 by Matches (Count).

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

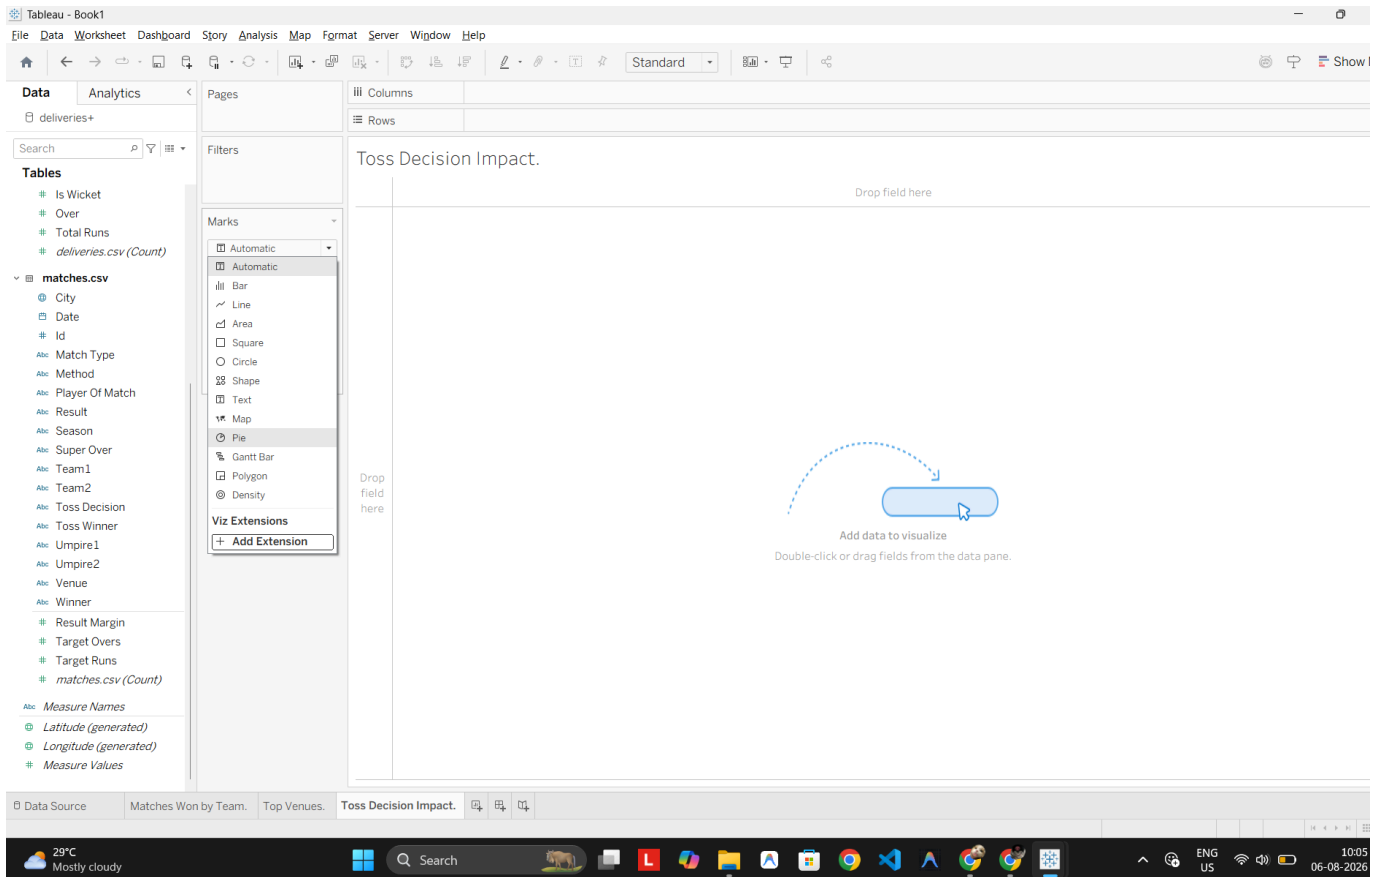

Change the mark type on the Marks card to Bar and color it a neutral shade (e.g., Navy Blue)

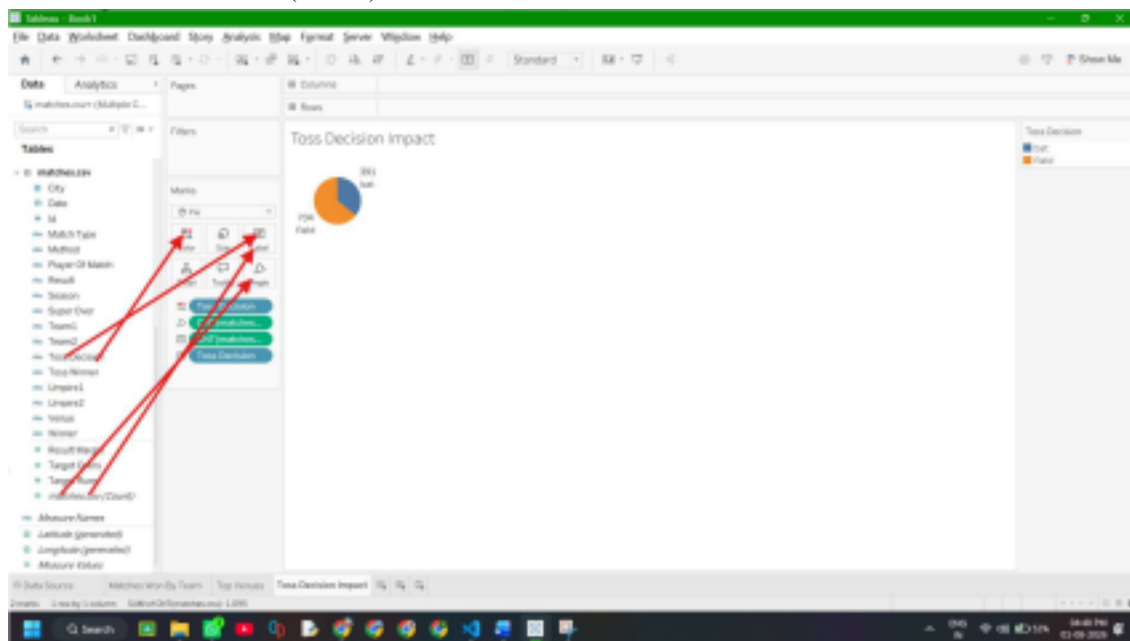

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

p 3: Create Sheet 3 "Toss Decision Impact" (Pie Chart or Donut Chart)

1. Open a new worksheet and rename it: Toss Decision Impact.
2. Change the Marks card drop-down from Automatic to Pie.

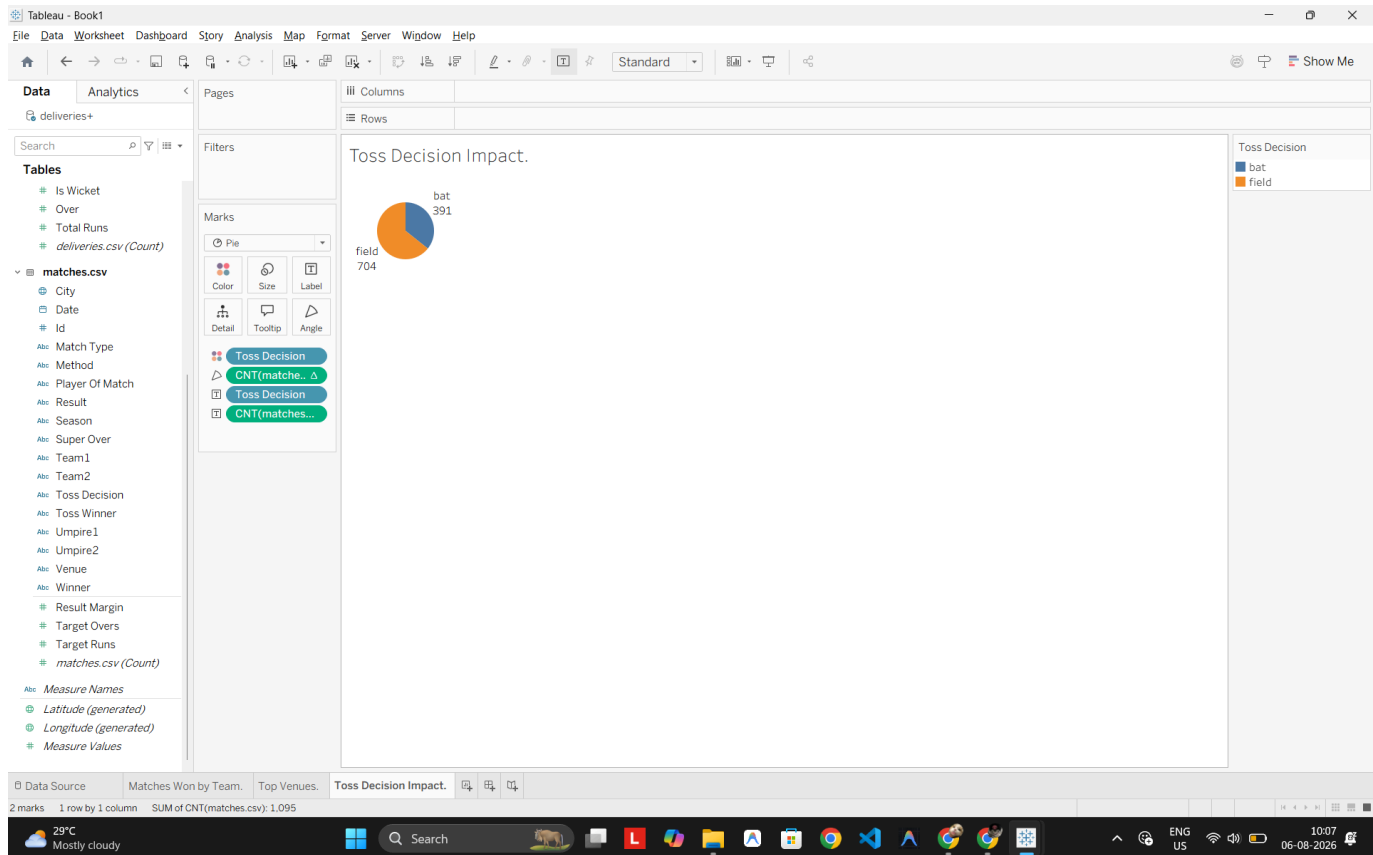

3. Drag Toss Decision (bat/field) to Color on the Marks card.
4. Drag Matches (Count) to Angle on the Marks card.
5. Drag Toss Decision and Matches (Count) to Label on the Marks card.

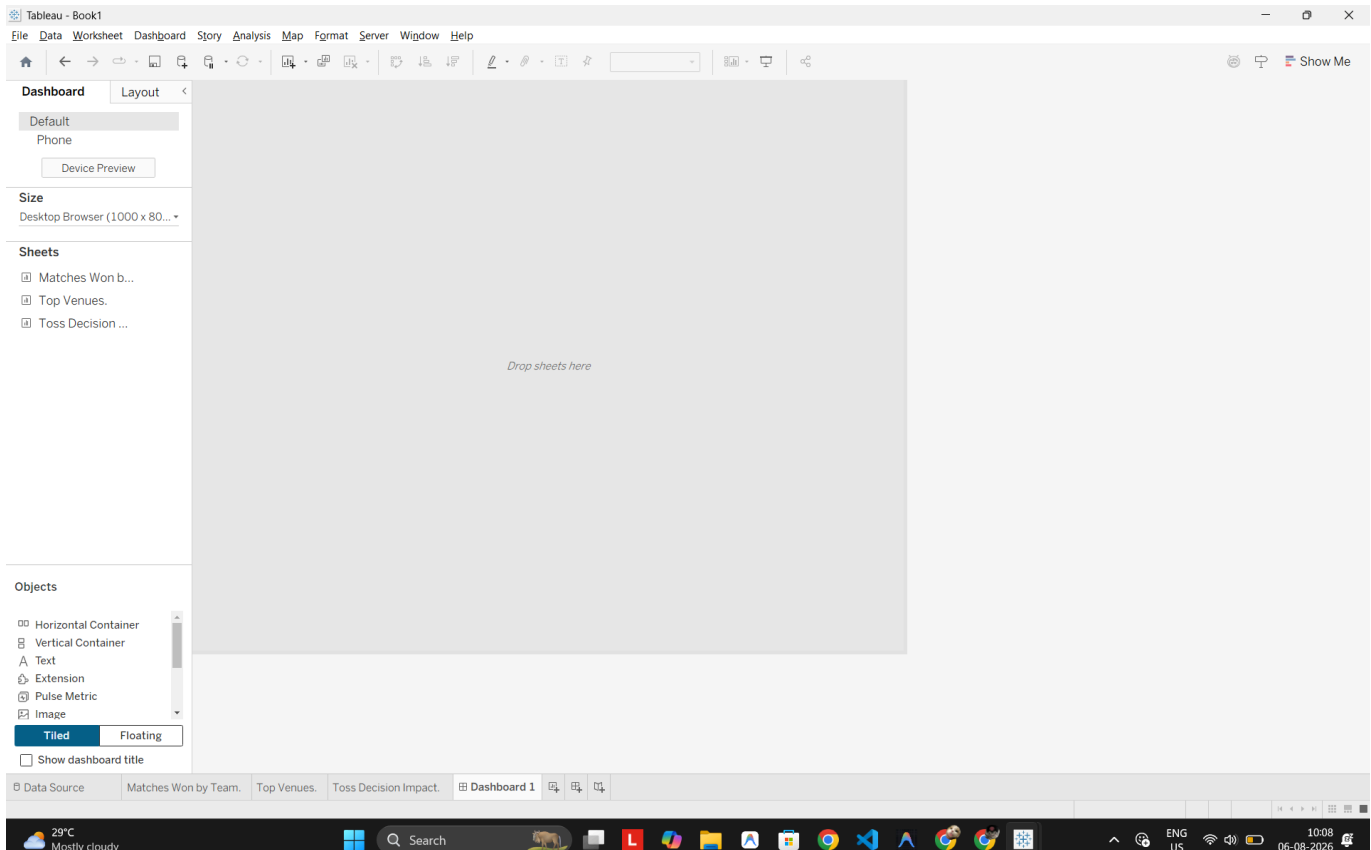

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

6. Look at the Marks card on the left side of your chart view.
7. Find the green pill named CNT(Matches) (or CNTD(Id)) that has a small T or Label icon next to it.
8. Right-click directly on that green pill (or click its small drop-down arrow).
9. In the pop-up menu, hover over Quick Table Calculation.
10. Select Percent of Total.

Step 4: Assemble the Dashboard Layout

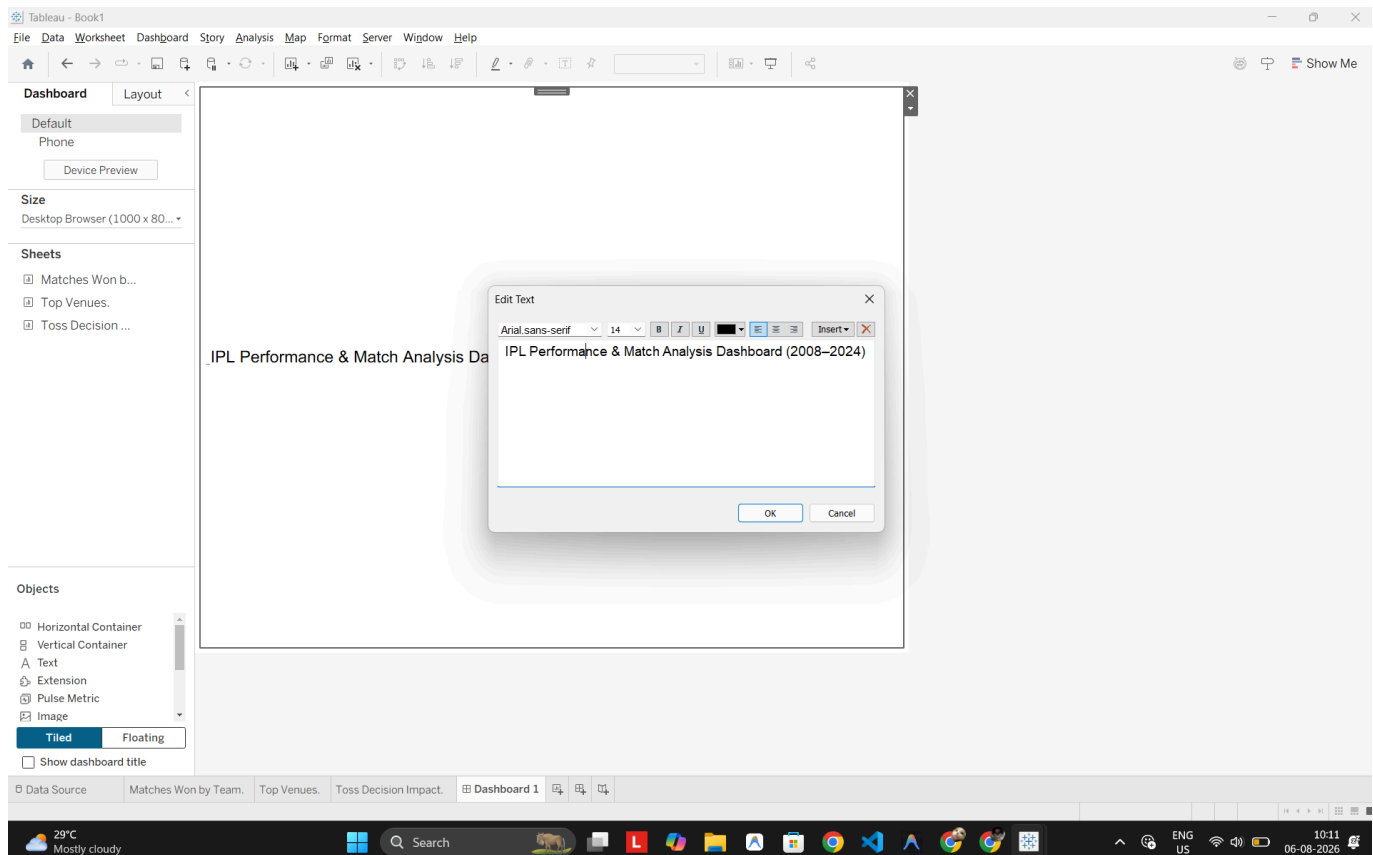

1. Create a new Dashboard (click the middle icon at the bottom tab area).
2. On the left sidebar under Size, set Fixed Size to Desktop Browser (1000 x 800) or Automatic.
3. Under Objects on the bottom left, ensure Tiled is selected.
4. Drag a Vertical Container into the blank dashboard area.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

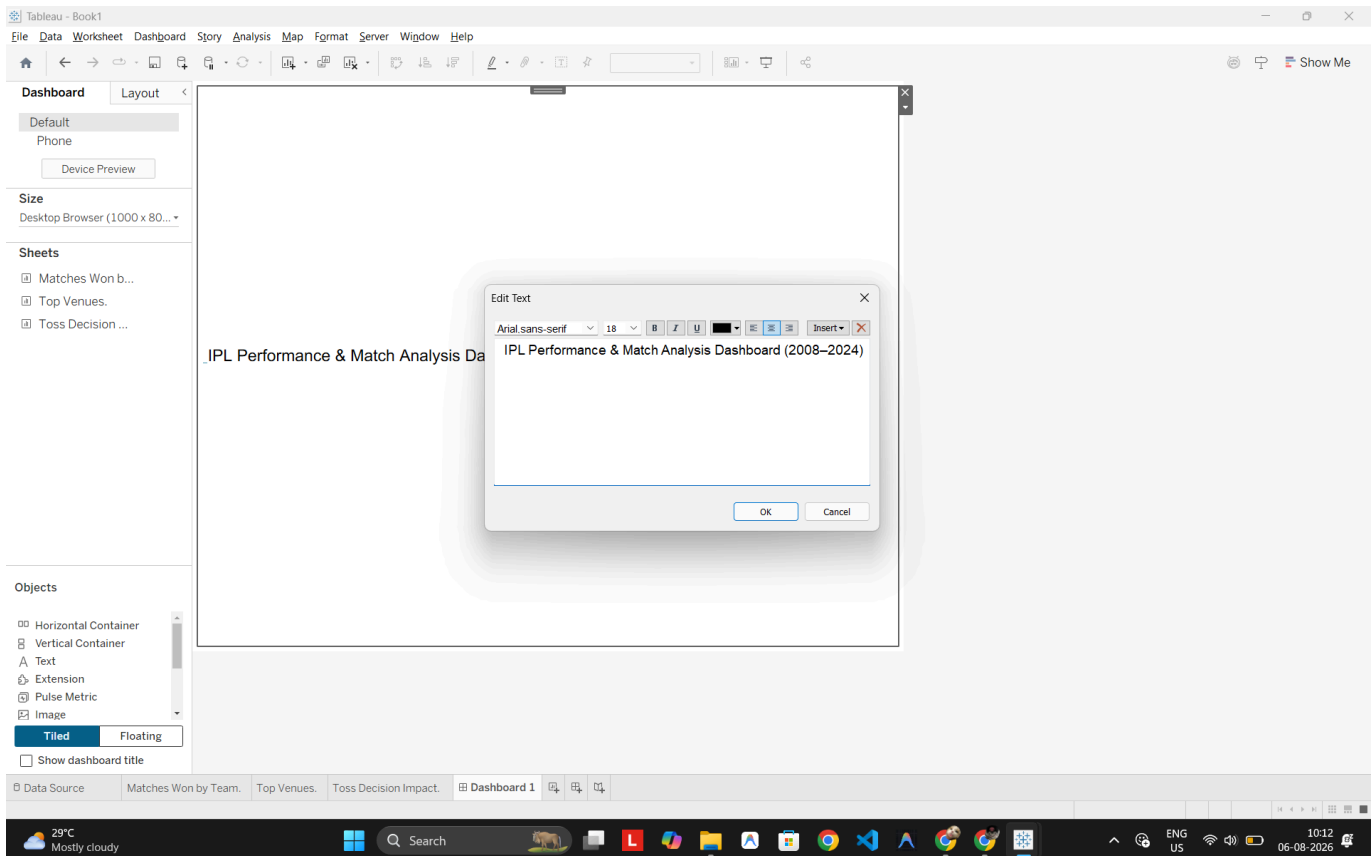

5. Add a Text object at the top inside the container:

o Header Text: IPL Performance & Match Analysis Dashboard (2008–2024)

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

o Format: Bold, 18pt, centered.

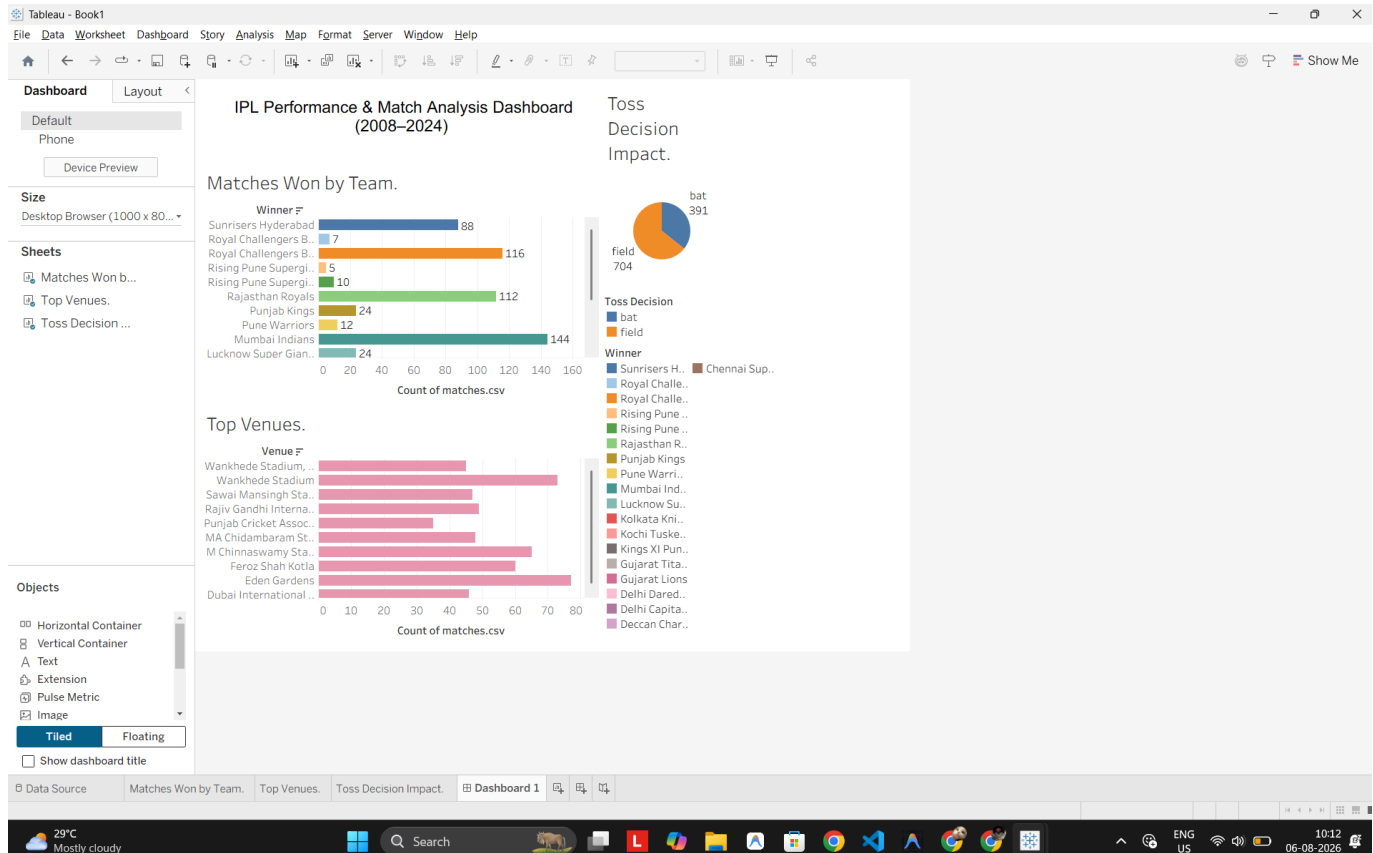

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

6. Drag your three sheets into the layout:

o Drag Matches Won by Team into the top/left area.

o Drag Top Venues next to or below it.

o Drag Toss Decision Impact to the side panel.

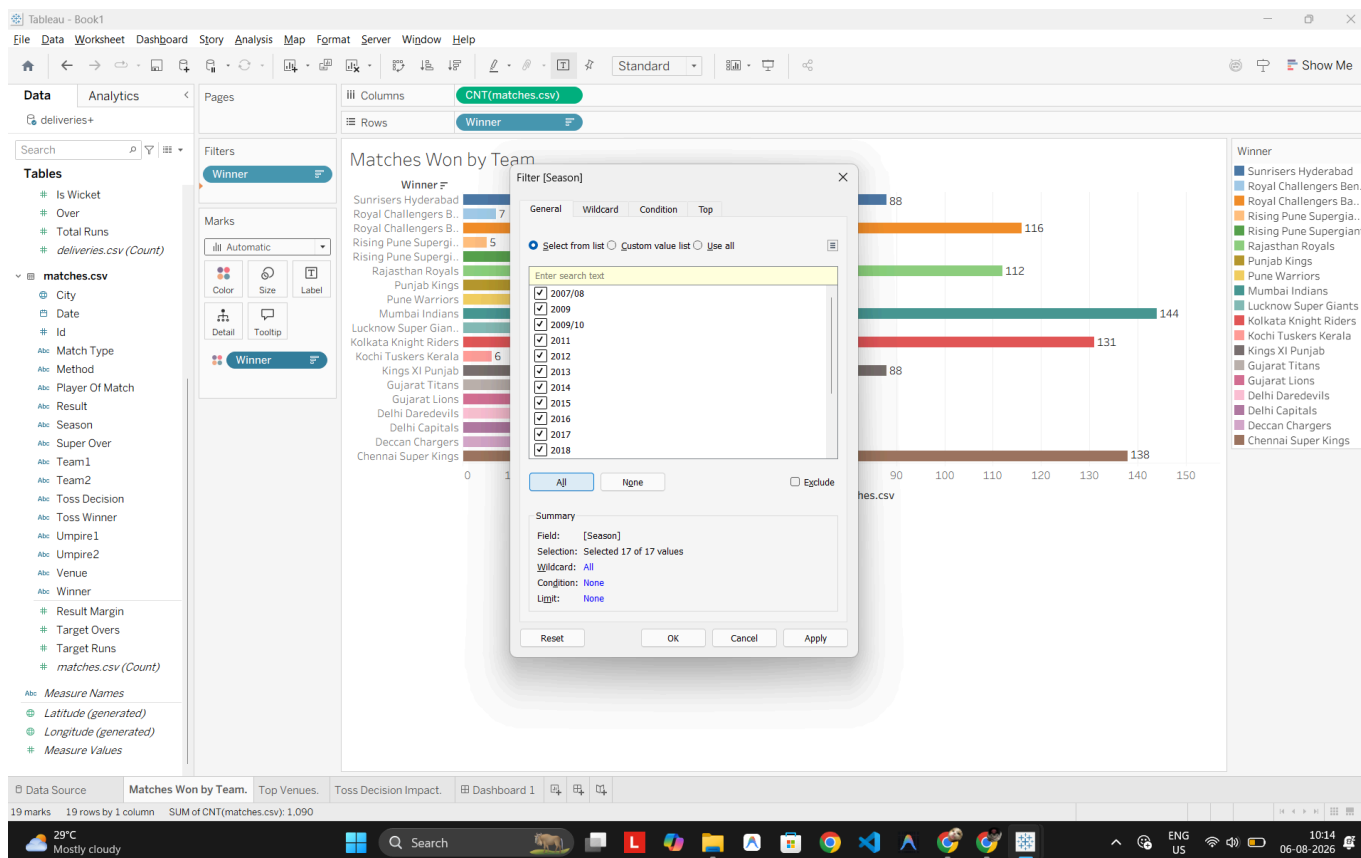

Sheth L.U.J & Sir M.V College

Subject: Data Visualization with Power BI and Tableau

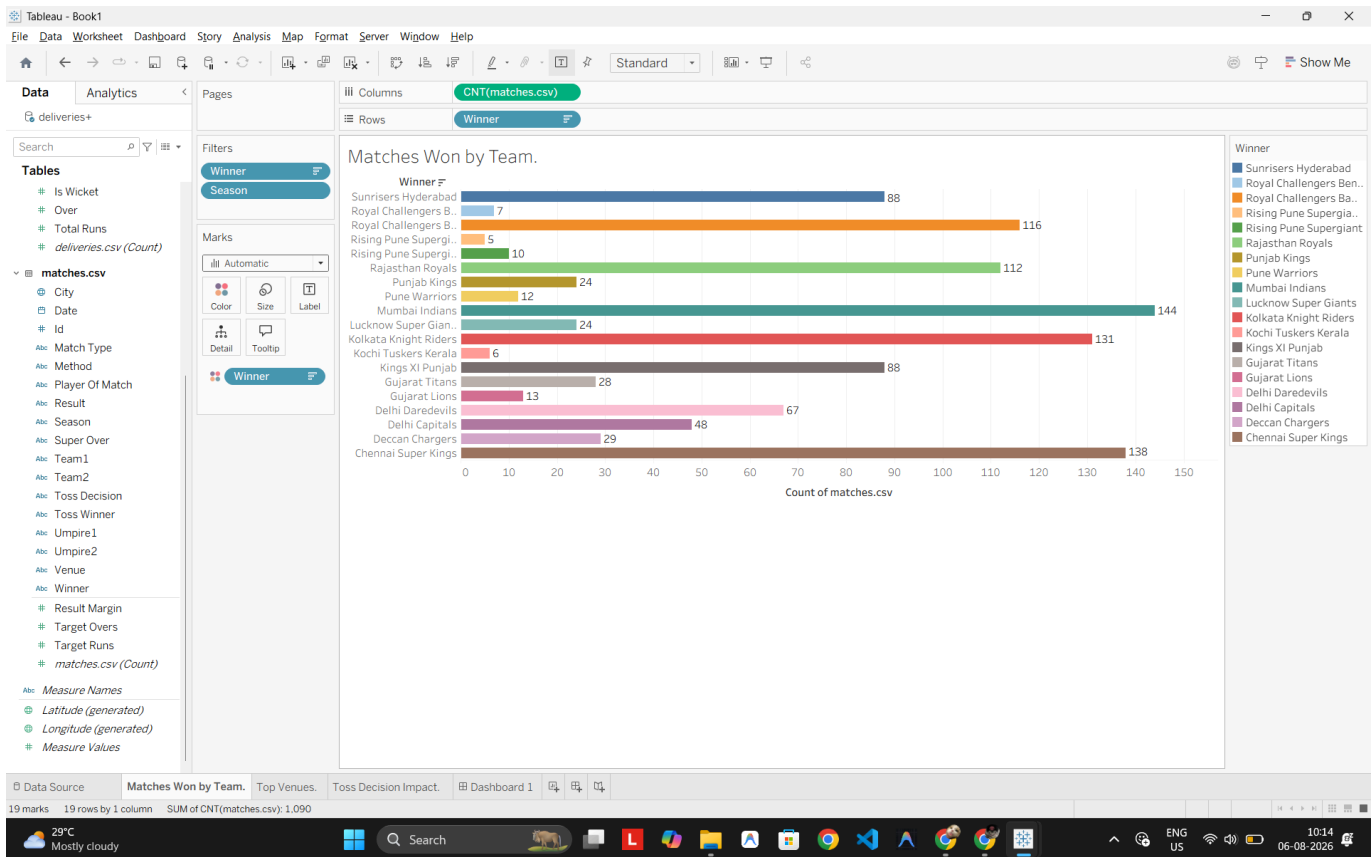

Step 1: Add a Season Filter across All Worksheets

1. Go back to your Matches Won by Team worksheet.
2. Drag Season from the Data pane onto the Filters card.
3. Select All and click OK.

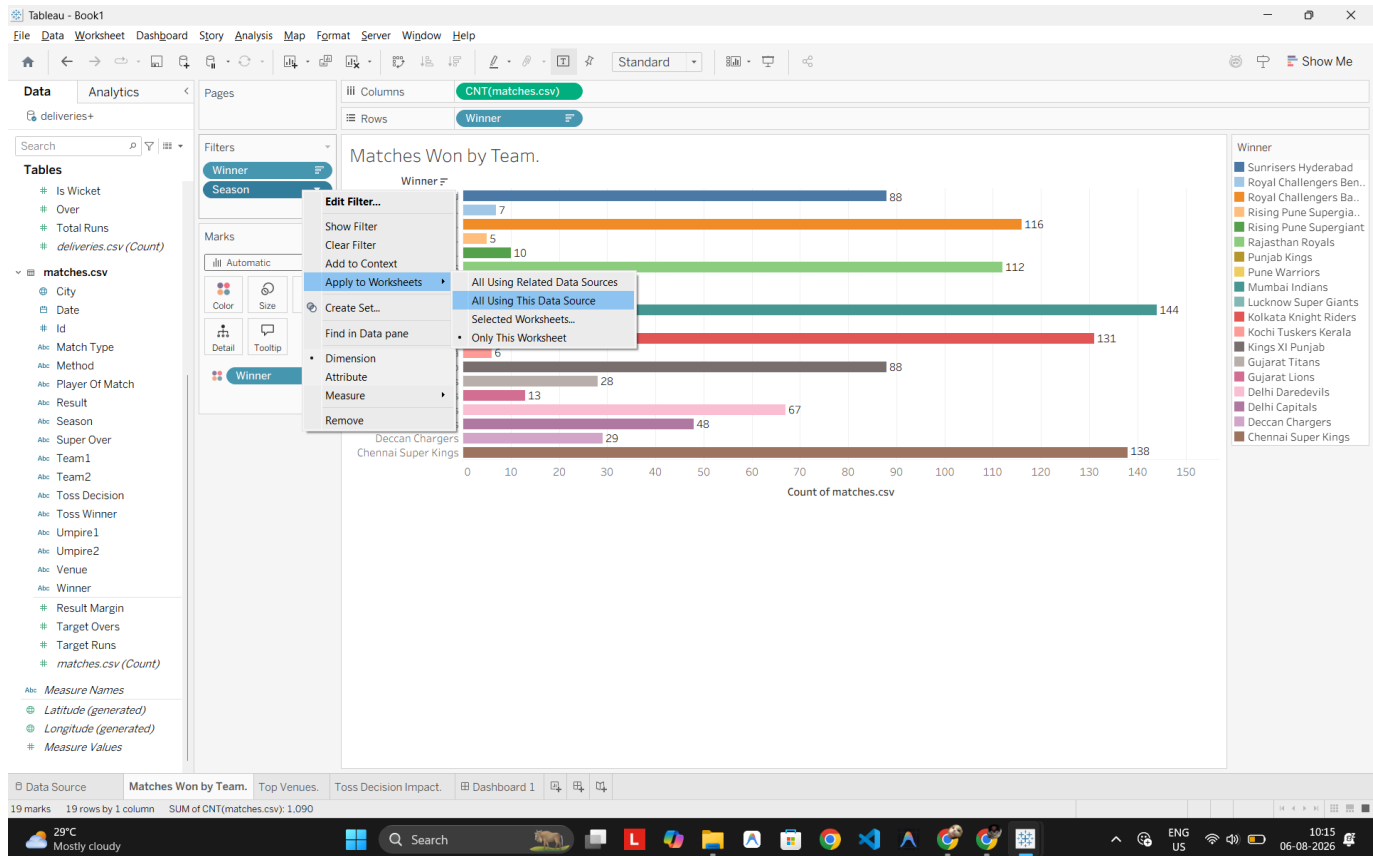

Sheth L.U.J & Sir M.V College

Subject: Data Visualization with Power BI and Tableau

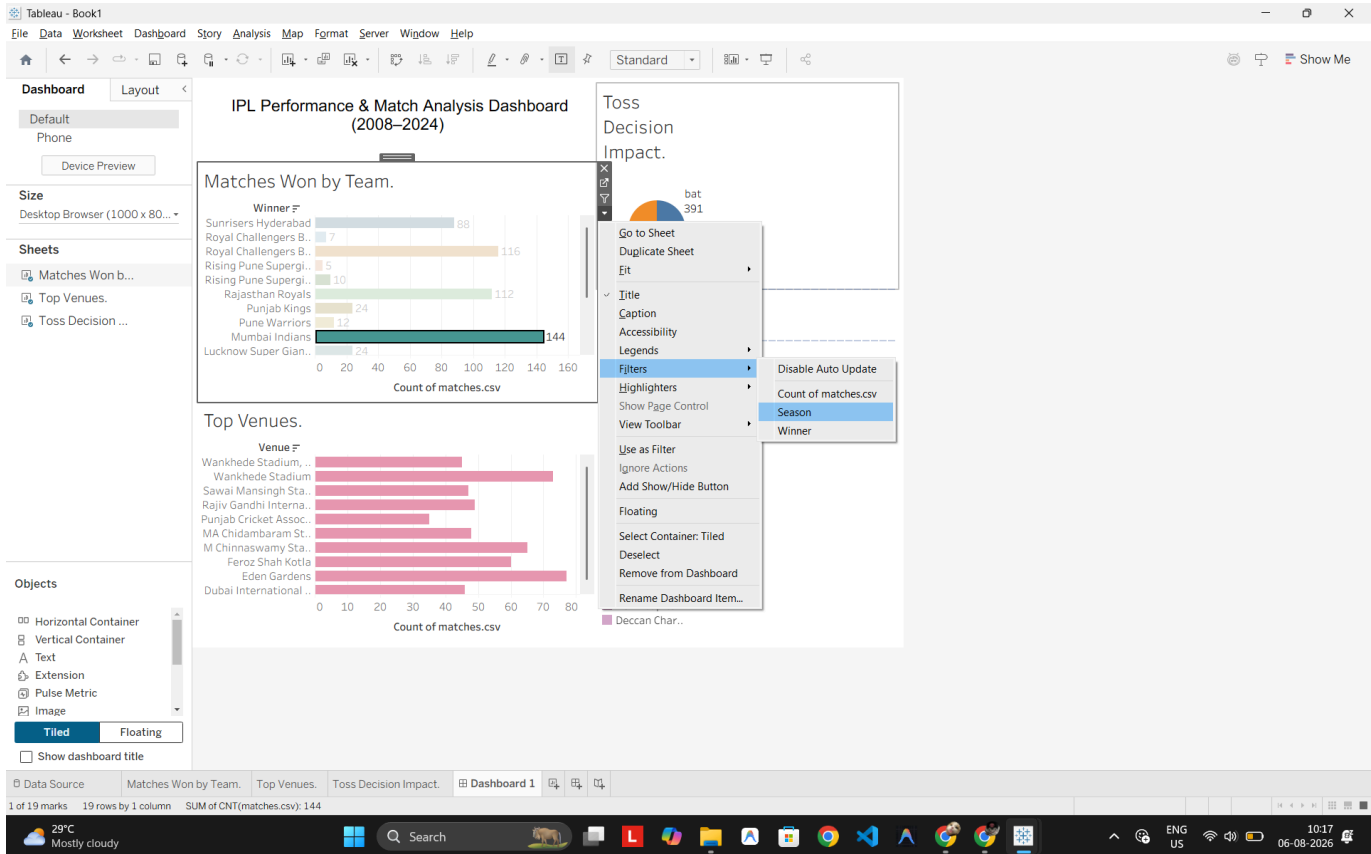

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

4. Right-click the Season pill on the Filters card and select Apply to Worksheets $\odot$ All Using This Data Source (This ensures changing the season updates all dashboard charts simultaneously).

Step 2: Add Filters to the Dashboard View

1. Switch back to your main Dashboard tab.
2. Click on the Matches Won by Team chart box to select it.
3. Click the small More Options drop-down arrow in the top-right corner of the chart outline box.
4. Go to Filters ☰ select Season.
5. The Season filter box will appear on your right sidebar.

Step 3: Customize Filter Styles for User-Friendly Interactivity

1. Click the drop-down arrow on the top right of the new Season filter container box on your dashboard.
2. Change the filter style to Multiple Values (Dropdown) or Wildcard Match / Single Value List (Dropdown keeps the dashboard clean).

The screenshot displays the Tableau Desktop interface with a dashboard titled "IPL Performance & Match Analysis Dashboard (2008-2024)". The dashboard contains three main visualizations:

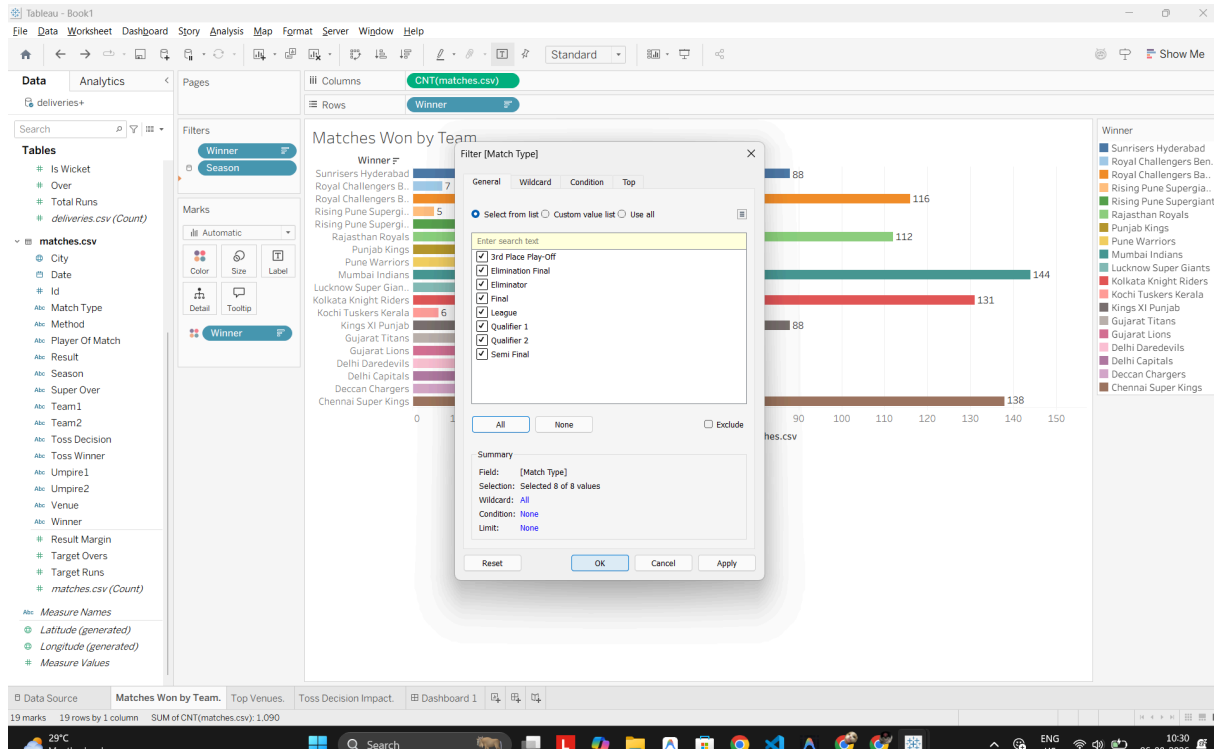

- Matches Won by Team:** A horizontal bar chart showing the number of matches won by various IPL teams. The x-axis is labeled "Count of matches.csv" and ranges from 0 to 160. The y-axis lists teams. Sunrisers Hyderabad has the highest wins (88), followed by Mumbai Indians (144) and Royal Challengers Bangalore (116).
- Top Venues:** A horizontal bar chart showing the number of matches played at various venues. The x-axis is labeled "Count of matches.csv" and ranges from 0 to 80. The y-axis lists venues. Wankhede Stadium has the highest number of matches (70), followed by Eden Gardens (60) and M Chinnaswamy Stadium (50).
- Toss Decision Impact:** A pie chart showing the distribution of toss decisions. The legend indicates "bat" (blue) and "field" (orange). The chart shows that batting teams win more matches (391) than fielding teams (391).

A "Season" filter is applied to the "Matches Won by Team" chart. The filter dropdown menu is open, showing options for "Single Value (list)", "Single Value (dropdown)", "Single Value (slider)", "Multiple Values (list)", "Multiple Values (dropdown)", "Multiple Values (custom list)", and "Wildcard Match". The "Multiple Values (dropdown)" option is selected. The dropdown menu also shows a list of seasons from 2007/08 to 2015, with "2012" selected.

The dashboard also includes a "Toss Decision" filter with options for "bat" and "field". The "Matches Won by Team" chart is currently set to "All" values in the database.

Sheth L.U.J & Sir M.V College

Subject: Data Visualization with Power BI and Tableau

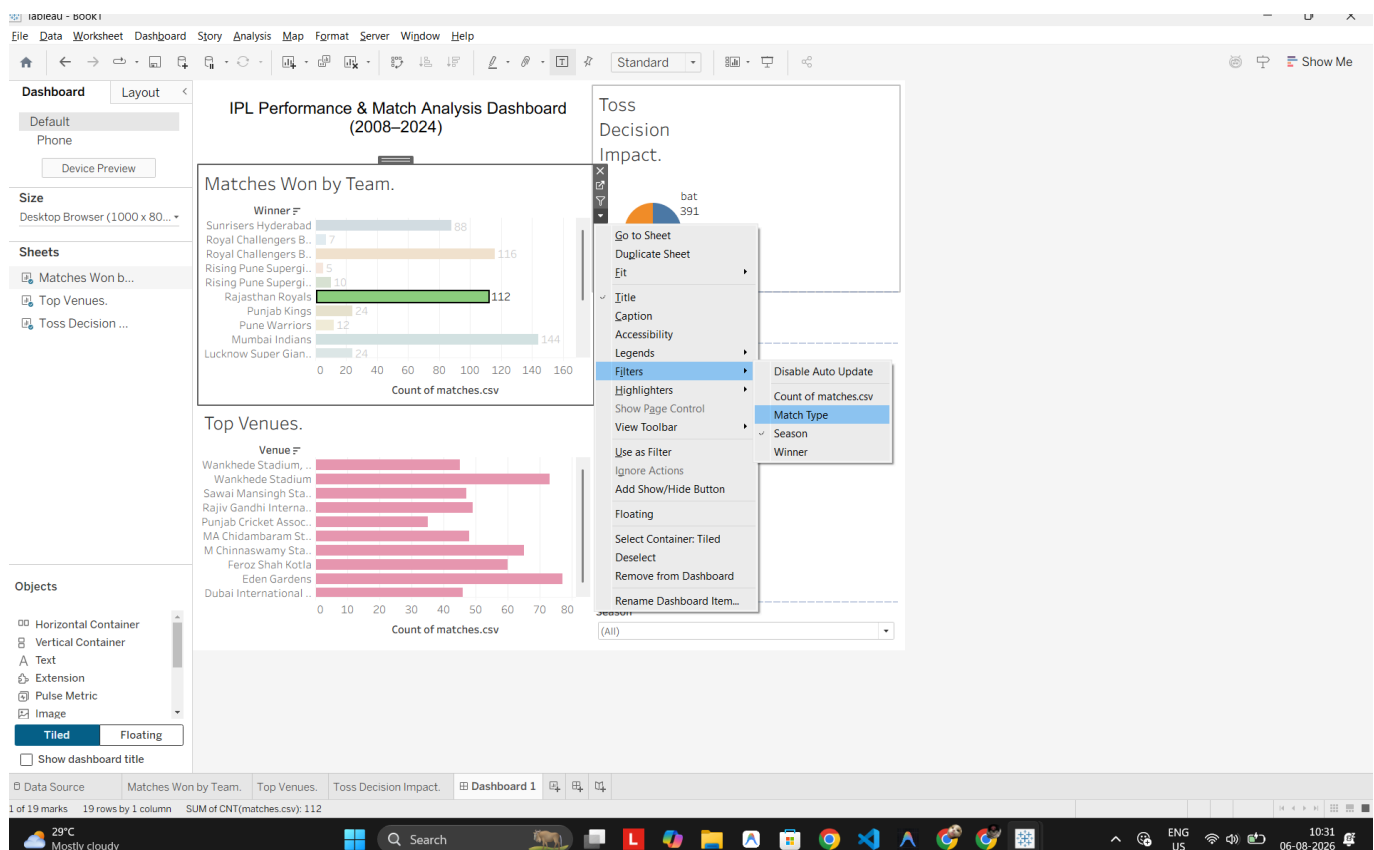

3. Repeat the process to add two more interactive filters:

- o Click once anywhere inside your Matches Won By Team bar chart. A gray border will appear around it, indicating it is selected.

- o Click the downward-pointing triangle (More Options) located on the top right edge of that gray border.

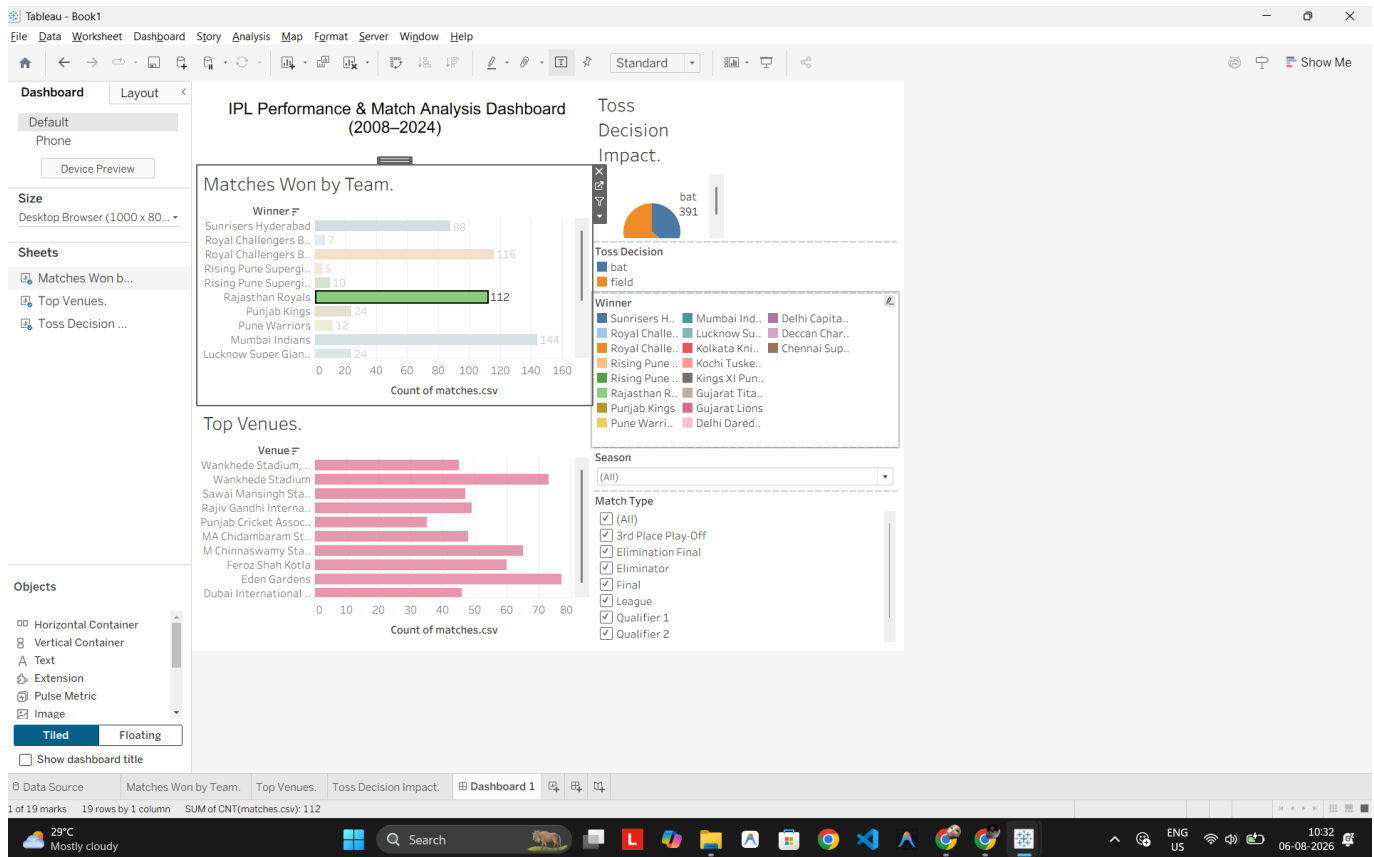

- o Hover over Filters in the menu and select Match Type. (Note: If it is not listed, you will need to navigate back to your "Matches Won By Team" worksheet, drag Match Type to the Filters shelf there, and then return to your dashboard).

- o Match Type (Filter by League vs. Playoff / Final matches) - set control type to Single Value (List) or Radio Buttons.

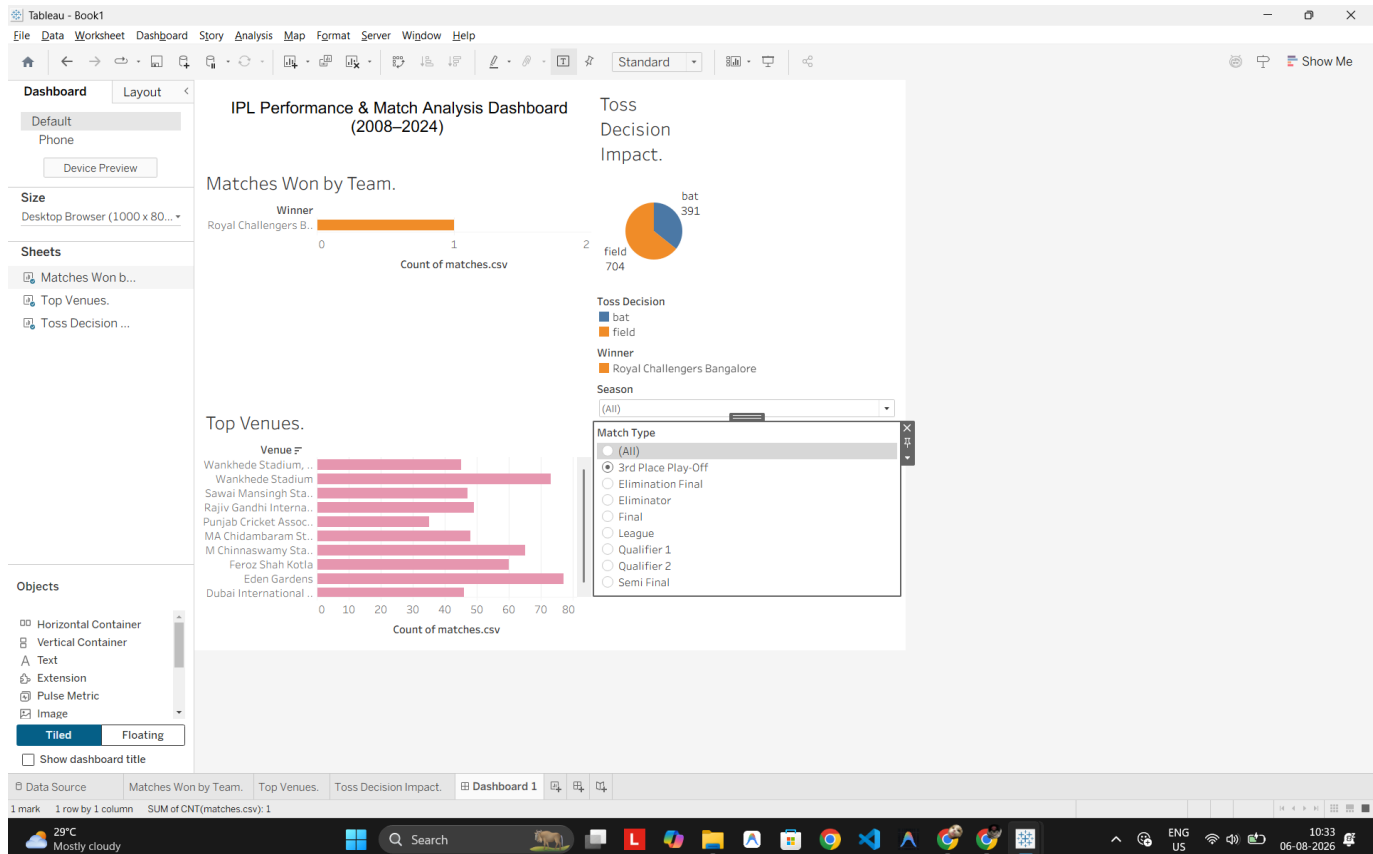

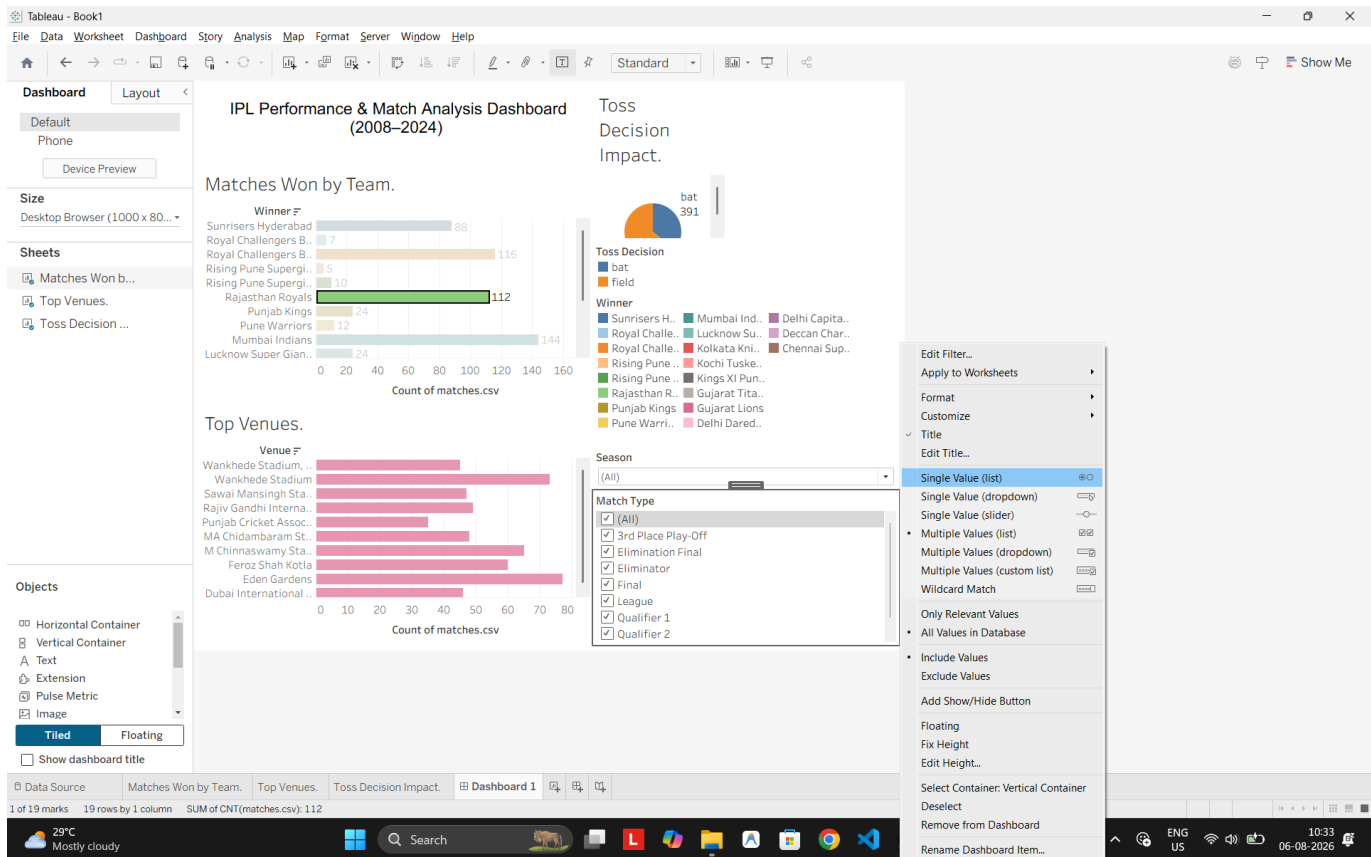

Sheth L.U.J & Sir M.V College

Subject: Data Visualization with Power BI and Tableau

Sheth L.U.J & Sir M.V College

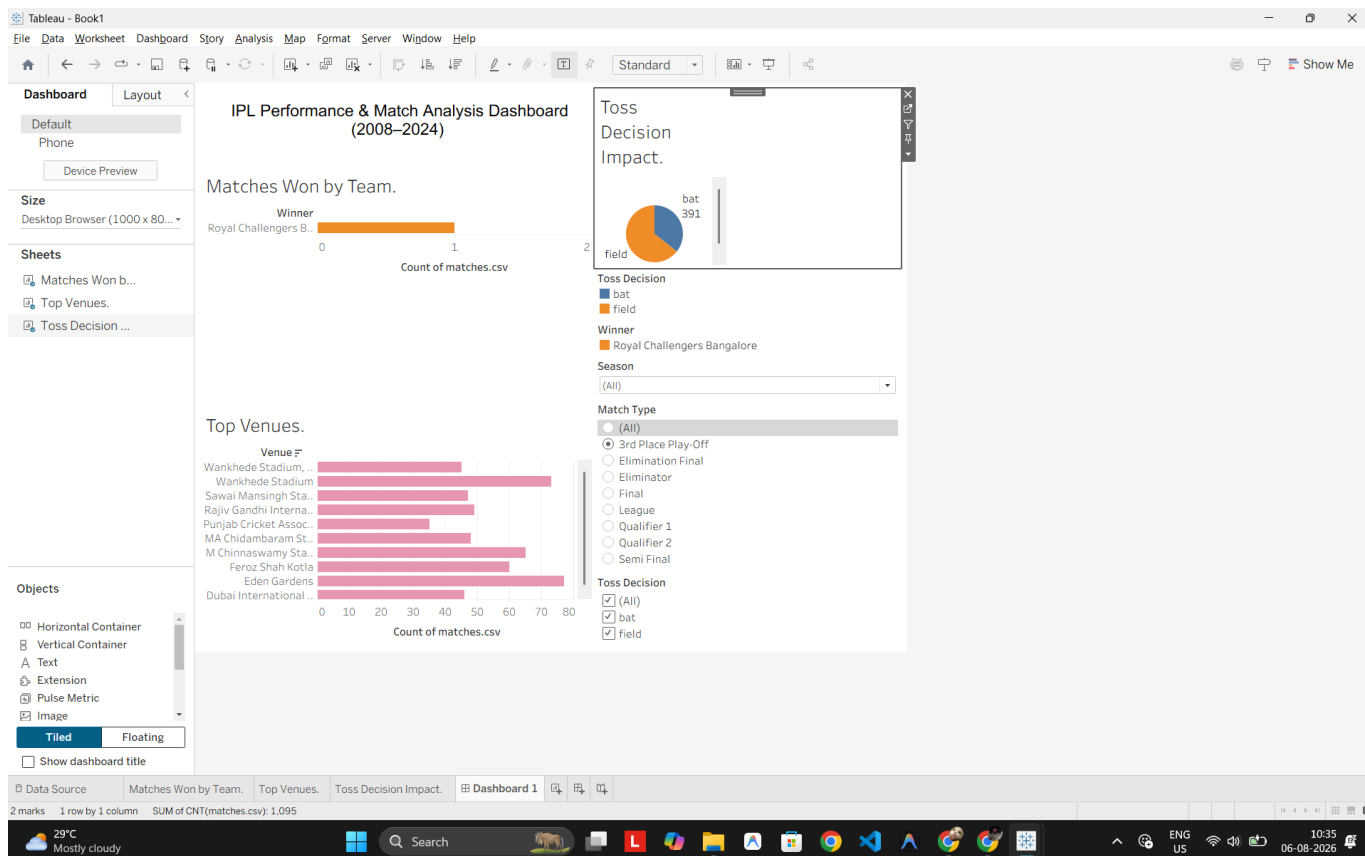

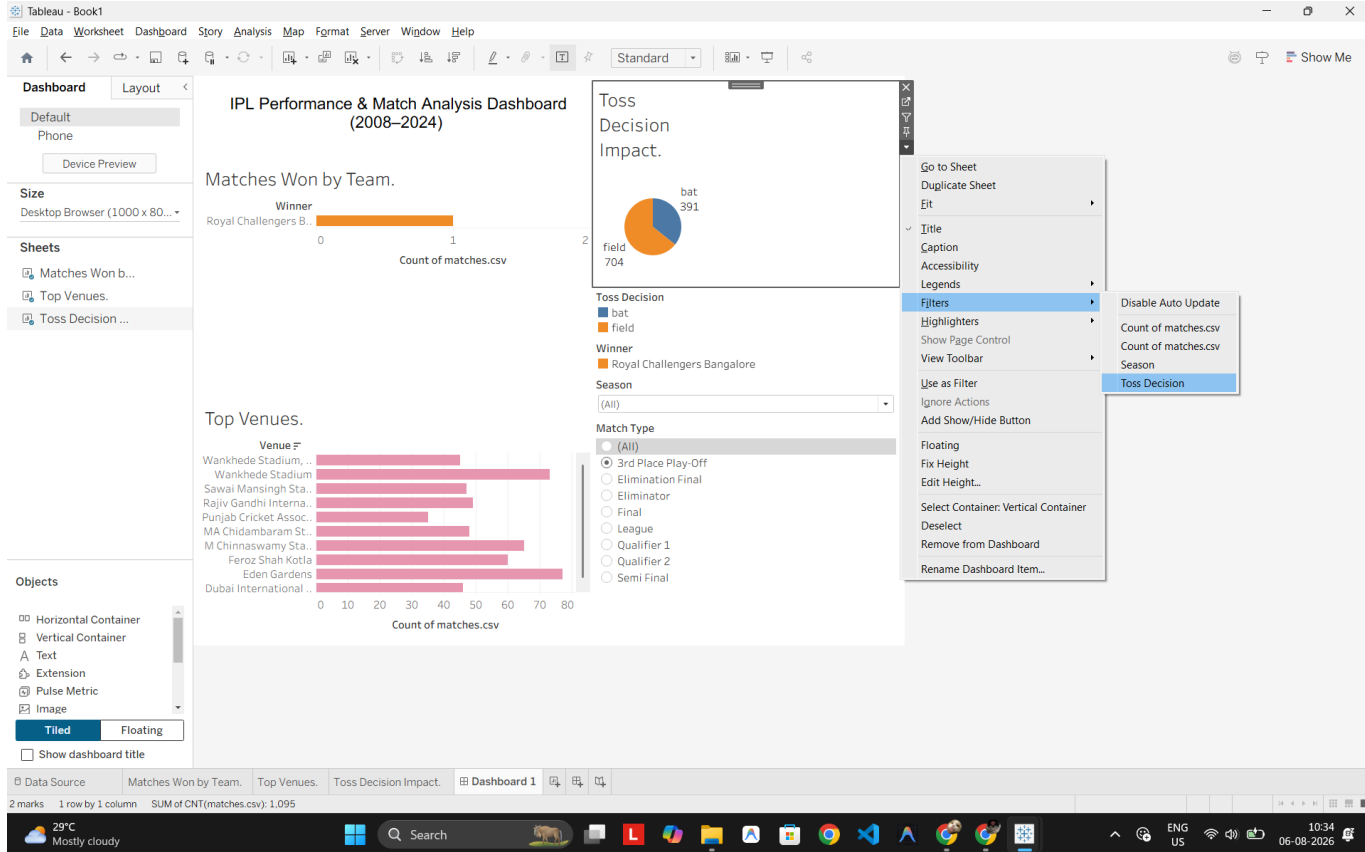

Subject: Data Visualization with Power BI and Tableau

Sheth L.U.J & Sir M.V College

Subject: Data Visualization with Power BI and Tableau

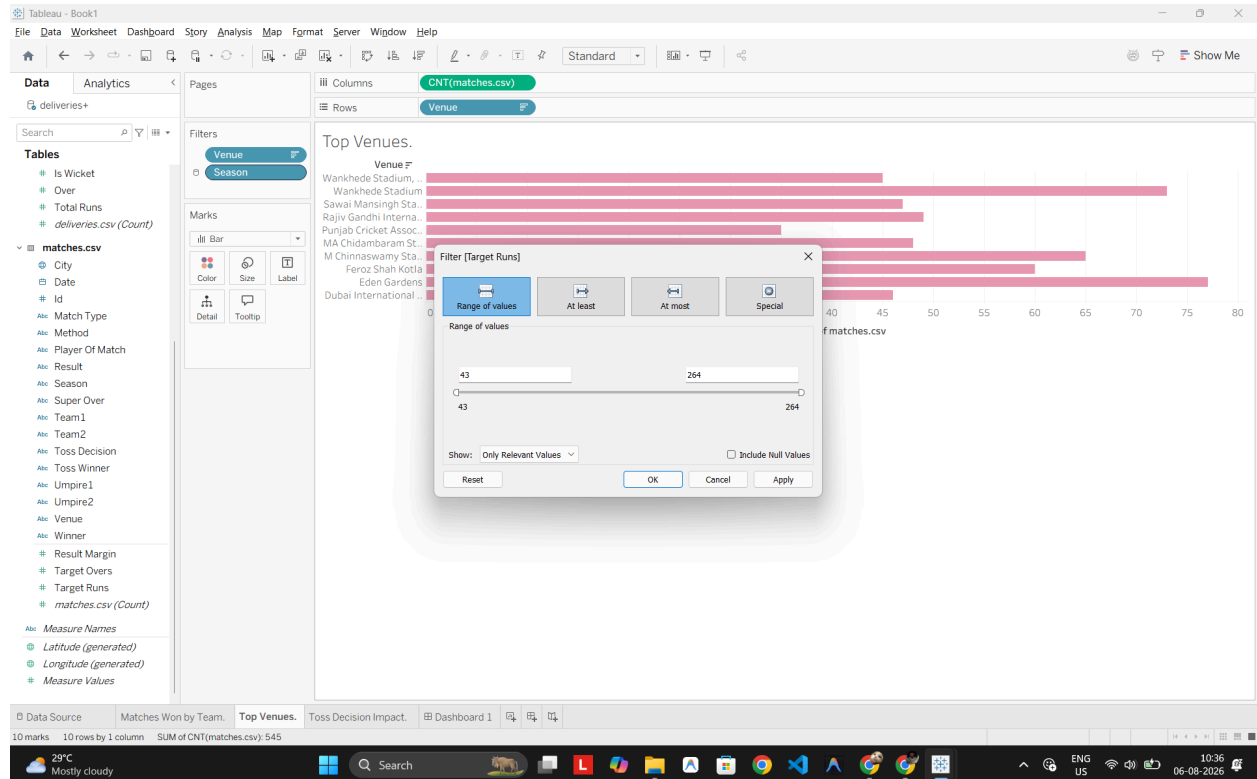

o City or Toss Decision - set as a Multiple Values (Dropdown).

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

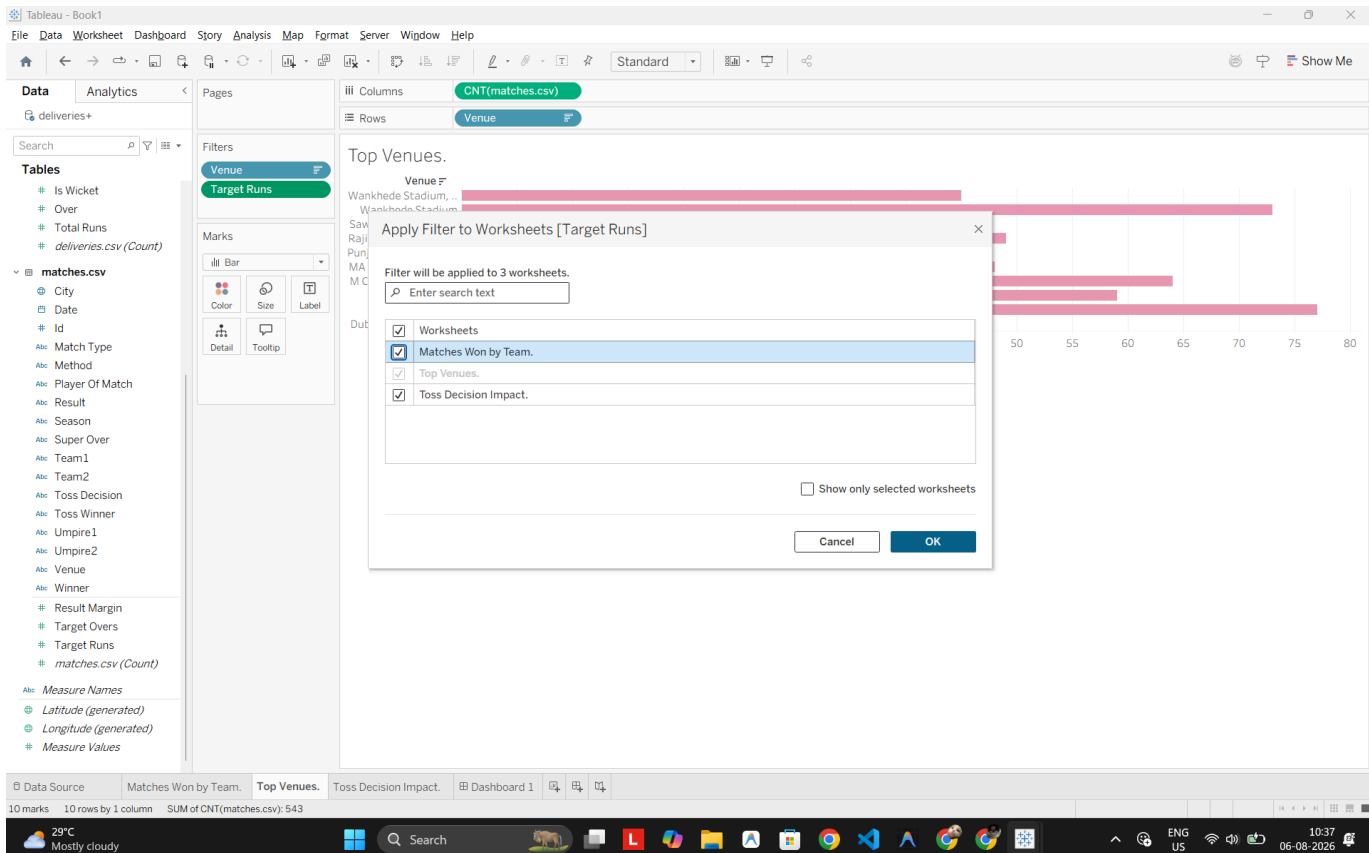

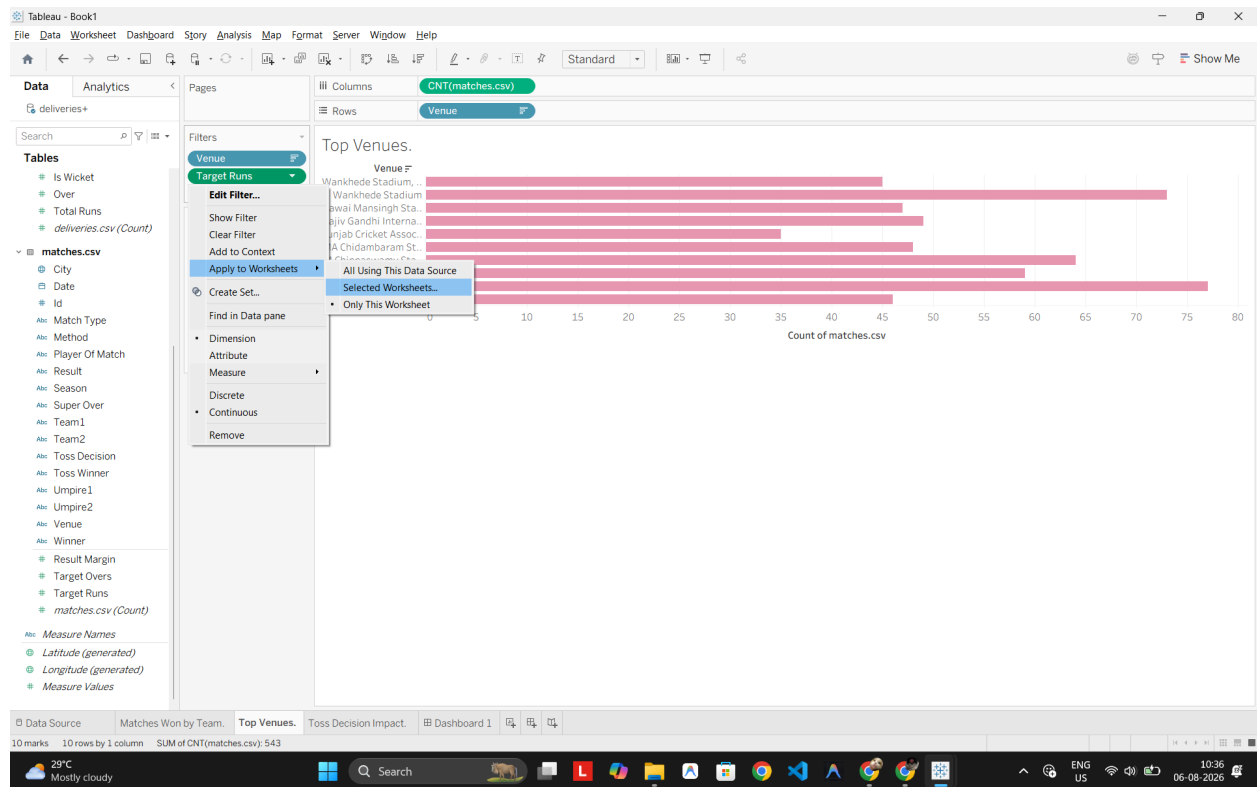

Step 4: Add a Target Runs Range Slider (Interactive Measure Control)

1. Go to the Top Venues sheet.
2. Drag Target Runs to the Filters card.
3. Choose Range of Values and click OK.

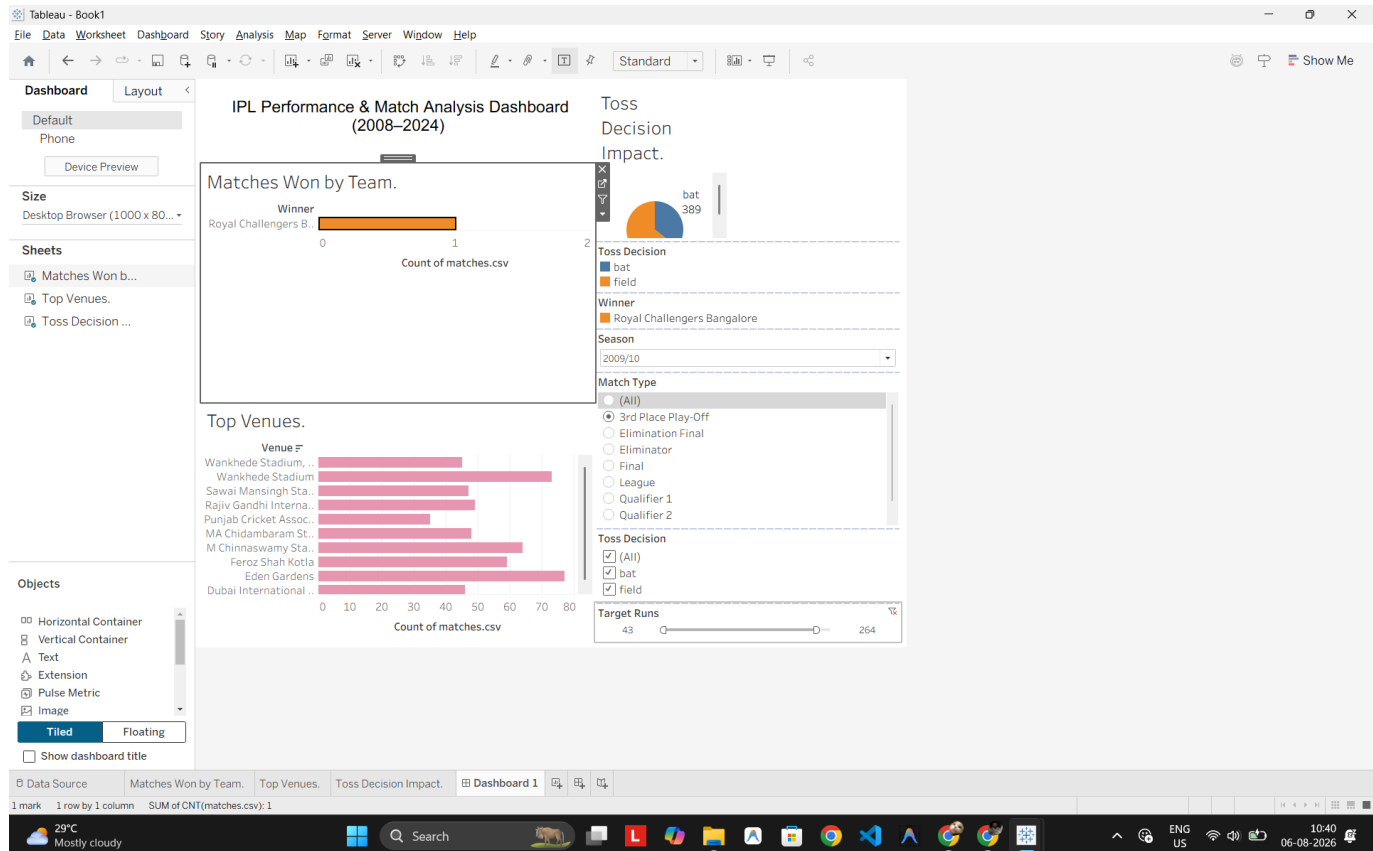

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

4. Right-click the Target Runs filter pill ☰ Apply to Worksheets ☰ Selected Worksheets (check all 3 dashboard sheets).

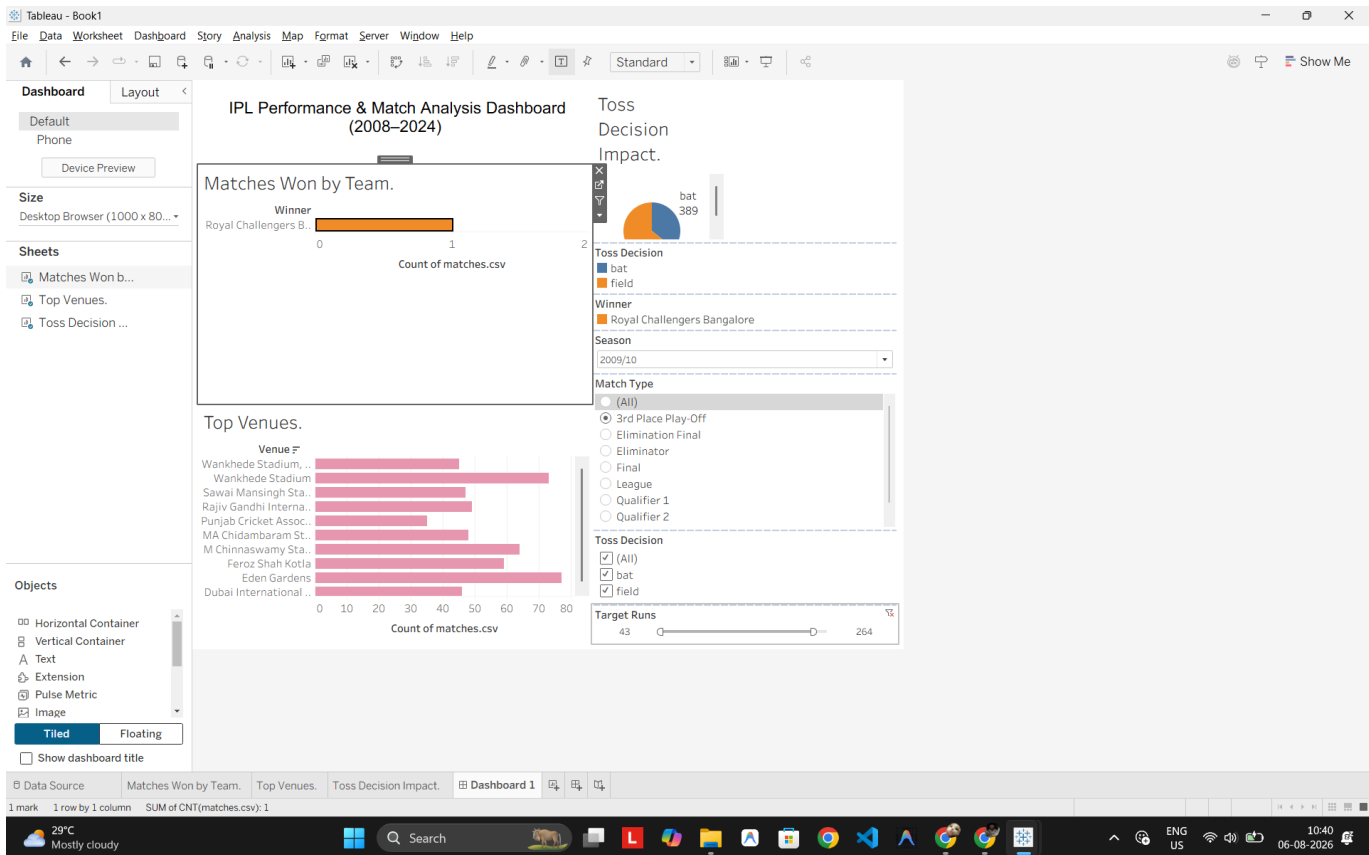

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

On the dashboard, enable the Target Runs filter from the chart's options menu.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

6. Observe how dragging the range slider dynamically isolates high-scoring vs. low scoring matches across venues and teams!

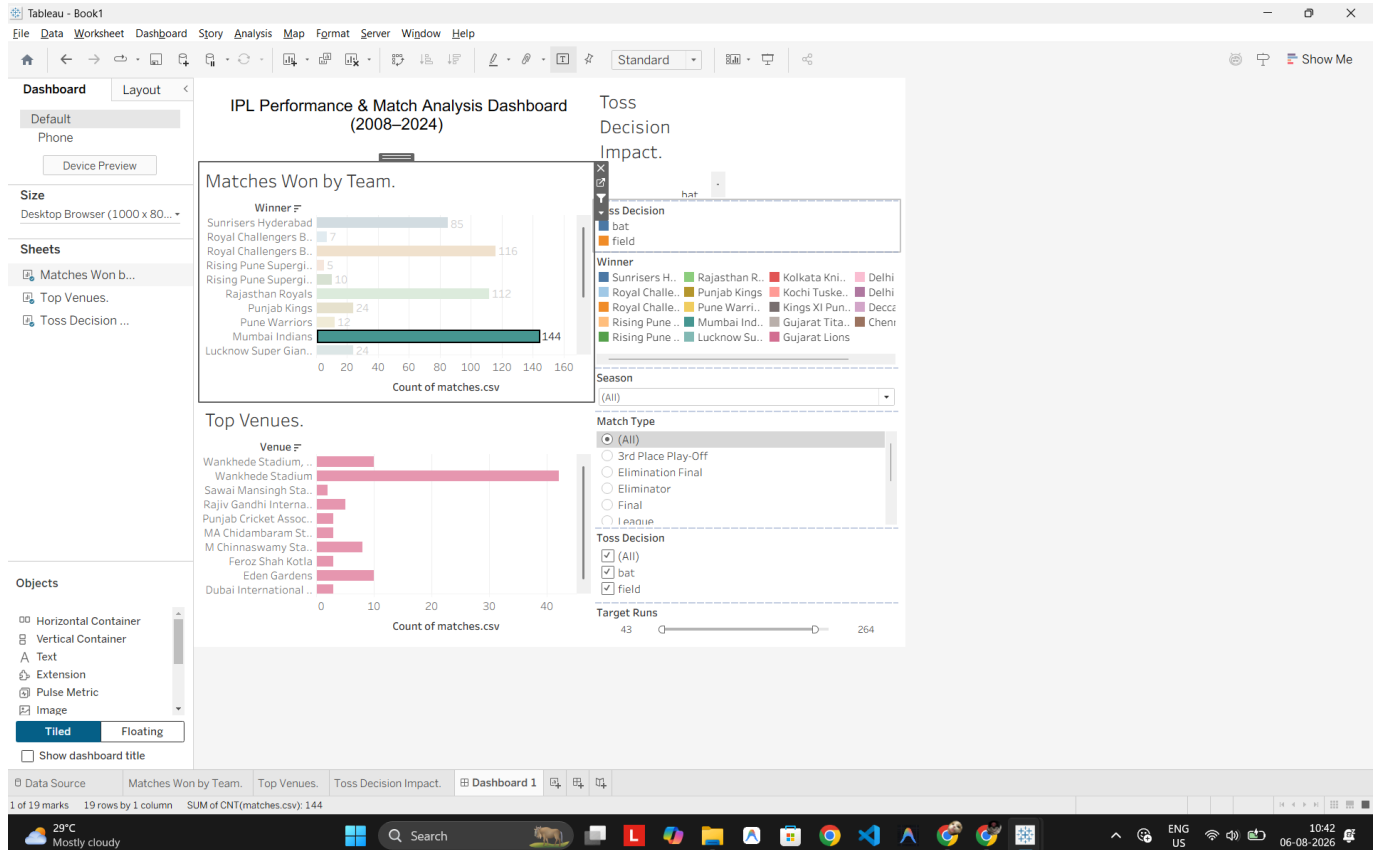

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

Step 1: Use a Sheet as a Quick Filter (The Easy Method)

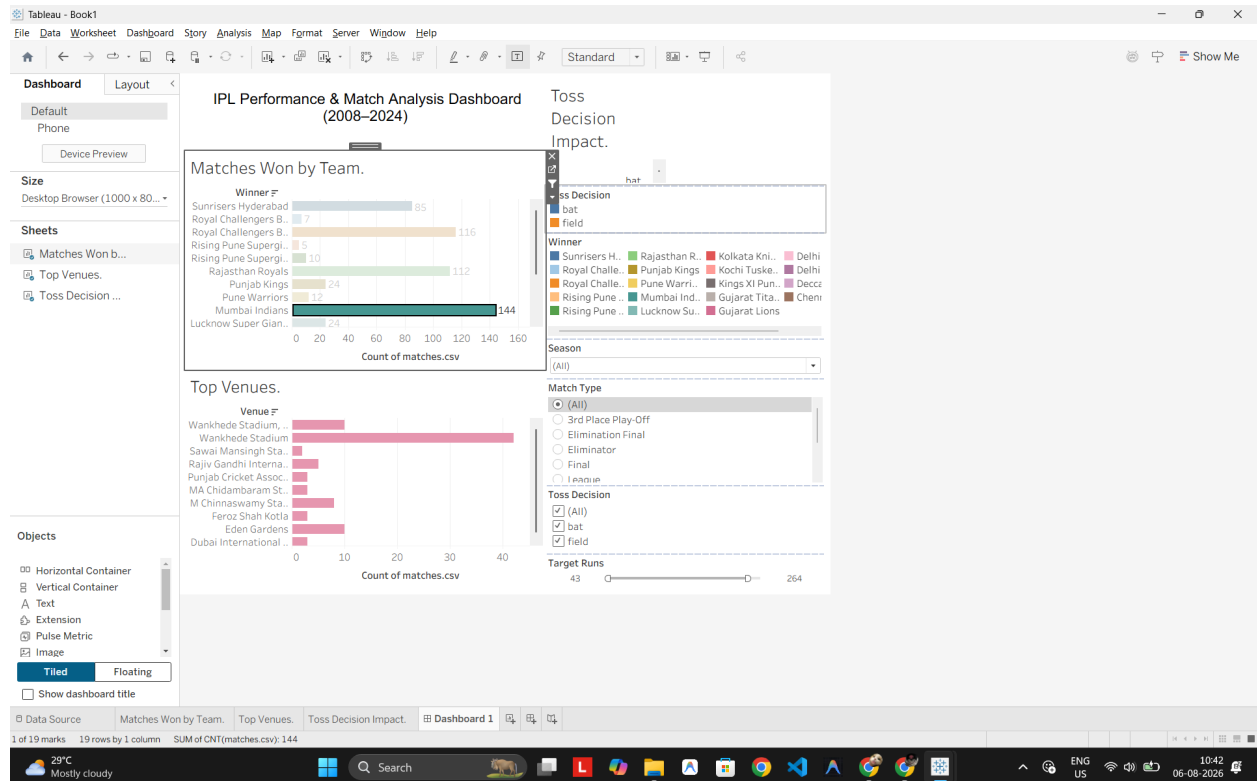

Tableau provides a 1-click way to turn any chart into an interactive filter for the entire dashboard:

1. Click on the Matches Won by Team chart box on your dashboard to select it.
2. Look at the small vertical toolbar that pops up on the top right side of the sheet border.
3. Click the Use as Filter icon (it looks like a small funnel symbol).

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

4. Test it: Click on Chennai Super Kings or Mumbai Indians in the bar chart. You will see both the Top Venues chart and the Toss Decision Impact pie chart dynamically update to show data only for that selected team! Click the selected bar again to clear the filter.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

Step 2: Set Up an Explicit Highlight Action via the Dashboard Menu

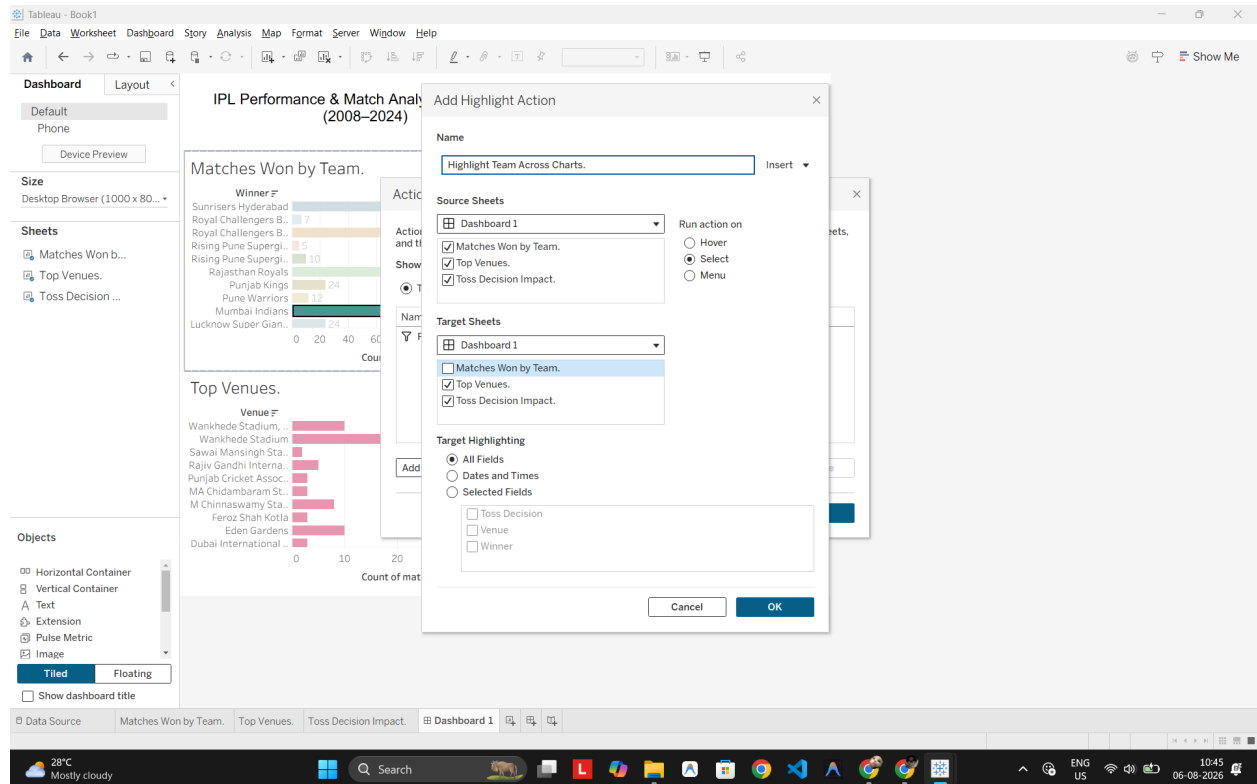

1. On the top menu bar, go to Dashboard --> Actions...
2. In the Actions window, click Add Action > and choose Highlight...

The screenshot displays the Tableau interface with a dashboard titled "IPL Performance & Match Analysis (2008-2024)". The dashboard includes two charts: "Matches Won by Team" and "Top Venues". The "Matches Won by Team" chart is a horizontal bar chart showing the number of matches won by various teams. The "Top Venues" chart is a horizontal bar chart showing the number of matches played at different venues. The "Add Highlight Action" dialog box is open, showing the "Name" field set to "Highlight", "Source Sheets" and "Target Sheets" both set to "Dashboard 1", and "Target Highlighting" set to "All Fields". The "Run action on" options are "Hover", "Select" (selected), and "Menu". The "Add" button is visible in the background.

Team	Matches Won
Sunrisers Hyderabad	7
Royal Challengers B.	5
Rising Pune Supergl.	10
Rajasthan Royals	24
Punjab Kings	15
Pune Warriors	24
Mumbai Indians	24
Lucknow Super Gian...	24

Venue	Count of matches
Wankhede Stadium, ...	10
Wankhede Stadium	10
Sawai Mansingh Sta...	10
Rajiv Gandhi Interna...	10
Punjab Cricket Assoc...	10
MA Chidambaram St...	10
M Chinnaswamy Sta...	10
Feroz Shah Kotla	10
Eden Gardens	10
Dubai International ...	10

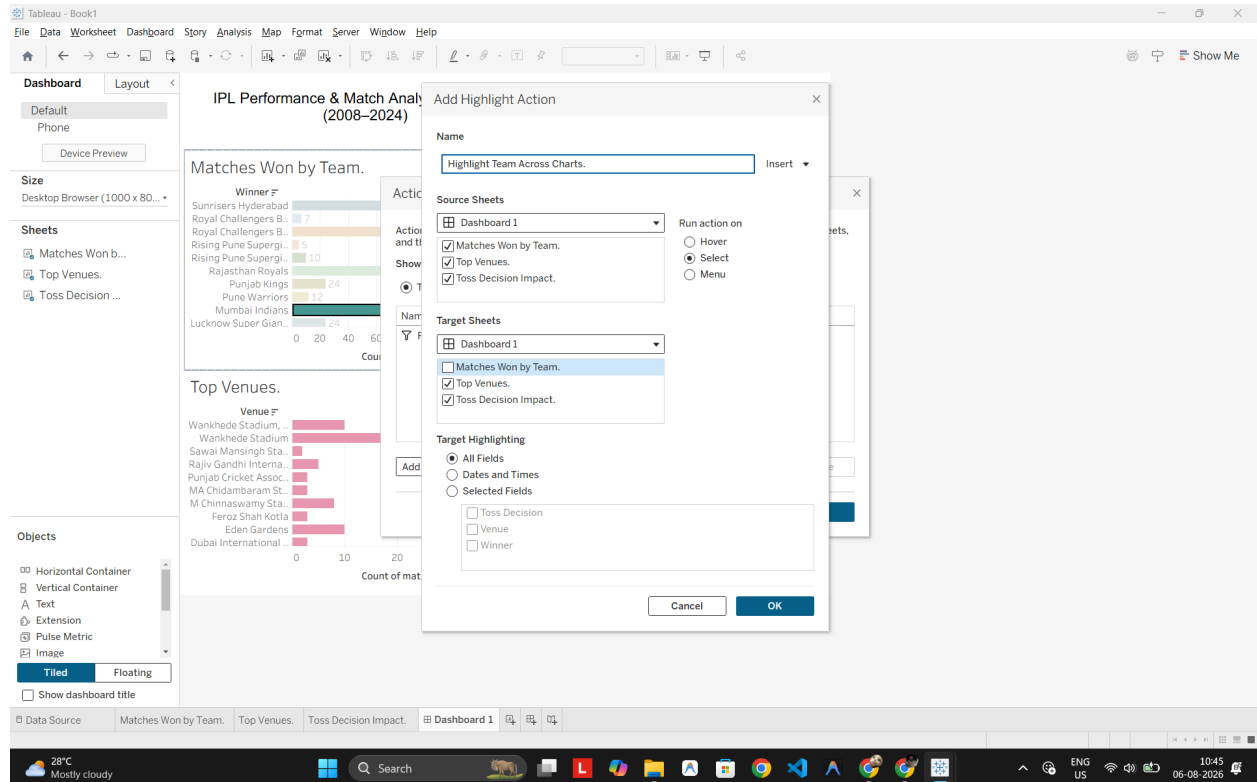

3. Name the action: Highlight Team Across Charts.
4. Set up the rules:
 - o Source Sheets: Select Matches Won by Team.
 - o Run action on: Select Hover (or Select if you prefer clicking).
 - o Target Sheets: Select Top Venues and Toss Decision Impact.
 - o Target Fields: Leave as All Fields or explicitly select Winner / Team1.
5. Click OK, then click OK again to save.

Step 3: Test Your Actions

 **Hovering:** Hover your mouse over any bar in Matches Won by Team to see associated data highlight across other sheets.

 **Clicking:** Click a venue in Top Venues (if "Use as Filter" is enabled there too) to see which teams have won the most matches at that specific stadium!

D: Use URL and set actions for interactivity

This is where we add advanced interactivity:

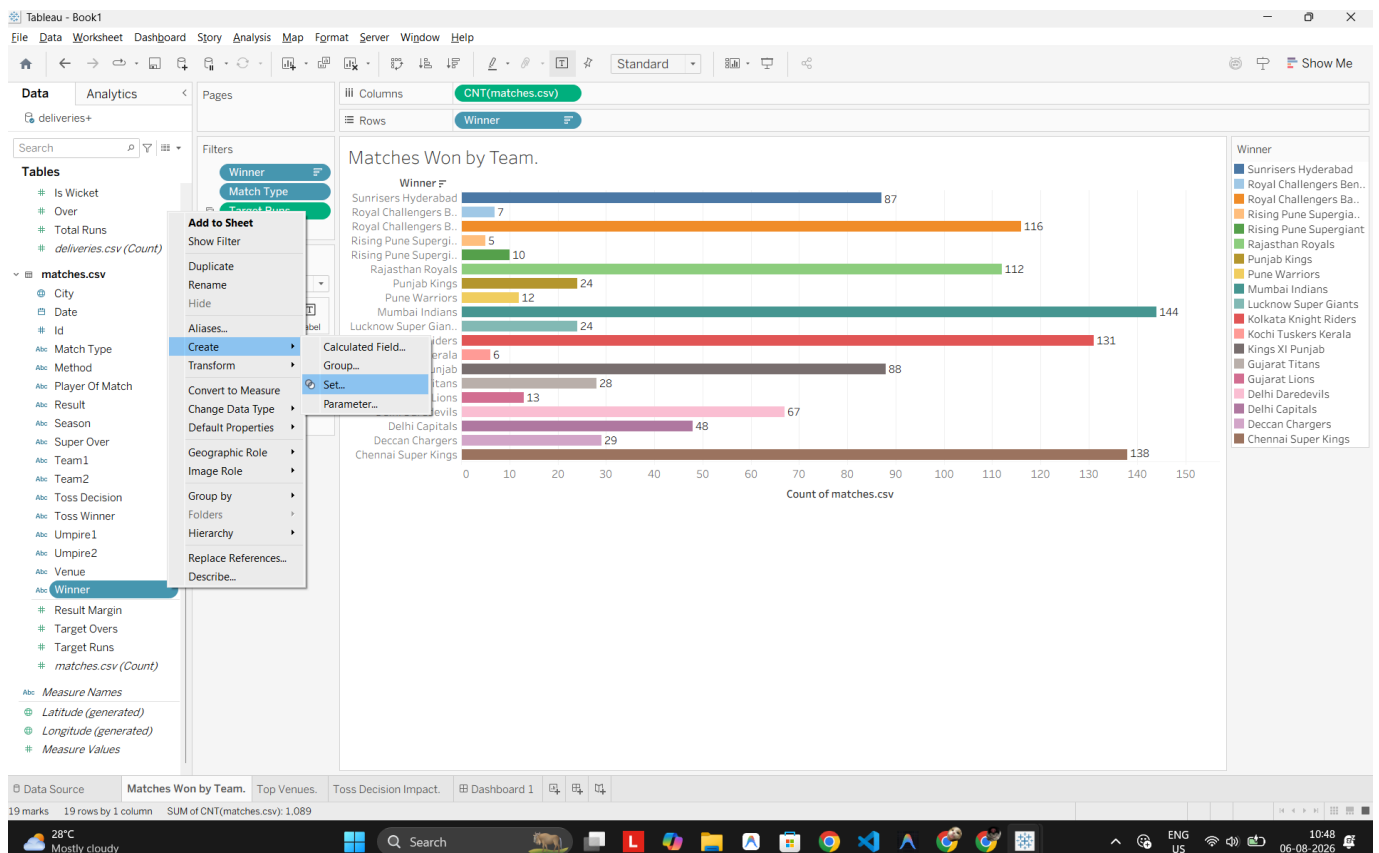

1. URL Action: Clicking a team or player name opens their official Wikipedia/ESPNcricinfo profile directly in a browser (or Web Page Object inside Tableau).
2. Set Action: Selecting one or more teams on a sheet dynamically updates a "Selected vs. Rest of League" comparison.

Task 1: Create a Set Action (Dynamic Team Comparison)

First, let's create a Set and configure a Set Action so clicking a team highlights or isolates that team against the rest of the league.

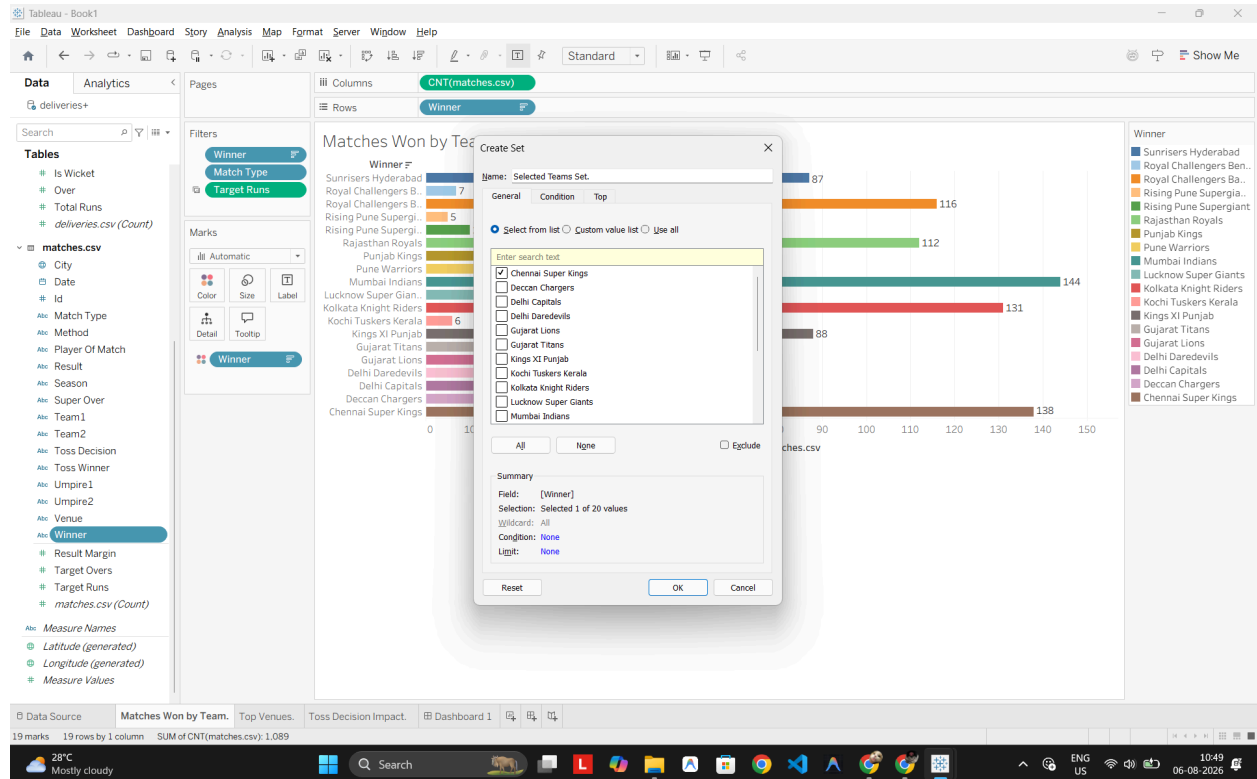

1. Create the Set in Tableau:

1. Go to the Data pane on the left side of any worksheet.
2. Right-click the Winner field  Create  Set...

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

3. Name the set: Selected Teams Set.
4. Select any single team (e.g., Mumbai Indians) just as a temporary placeholder.

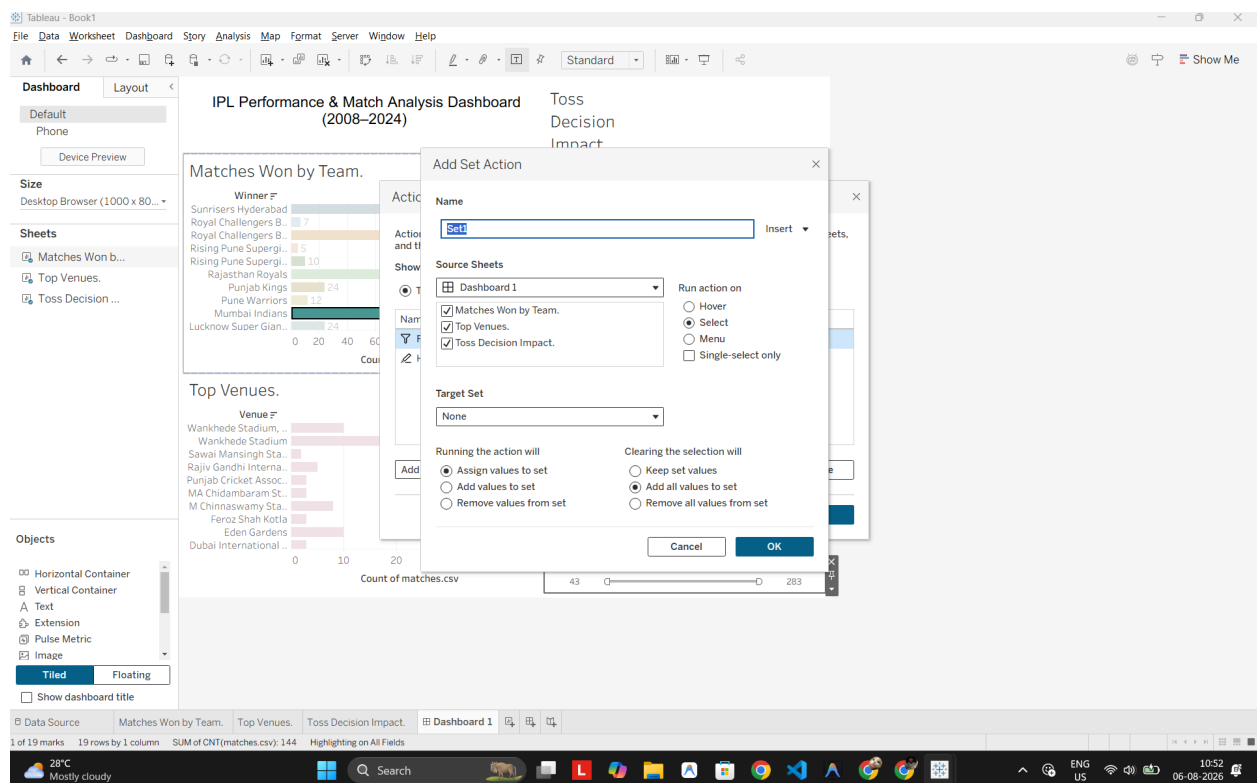

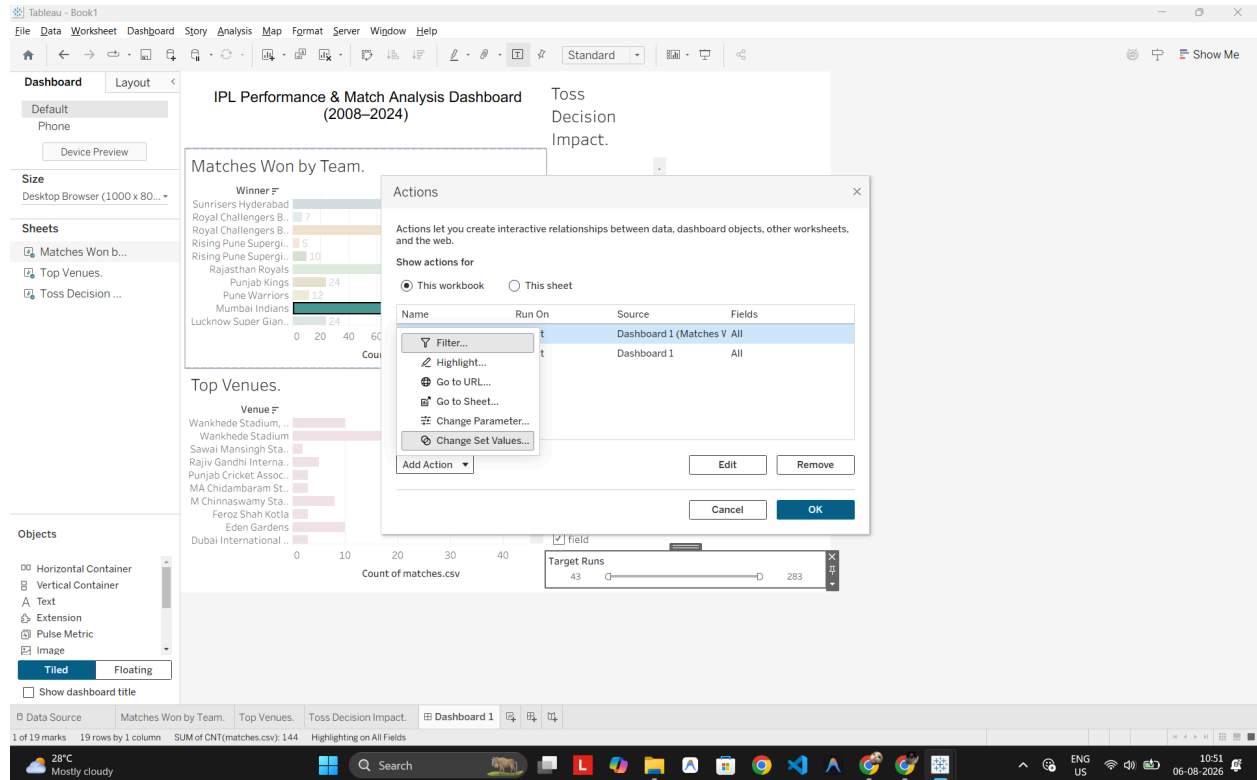

5. click OK.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

2. Configure the Set Action on the Dashboard:

1. Return to your main Dashboard tab.
2. Go to the top menu bar: Dashboard ☰ Actions...
3. Click Add Action > ☰ select Change Set Values...

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

4. Set up the details:

- o Name: Update Selected Team Set
 - o Source Sheets: Select Matches Won by Team
 - o Run action on: Select
 - o Target Dataset: Choose your IPL dataset/matches file.
 - o Set: Choose Selected Teams Set.
 - o Running the action will: Assign values to set
 - o Clearing the selection will: Remove all values from set (or Keep set values).
5. Click OK, then click OK again.

The screenshot displays the Tableau Desktop interface with a dashboard titled "IPL Performance & Match Analysis Dashboard (2008-2024)". The dashboard includes two charts: "Matches Won by Team." and "Top Venues.". The "Matches Won by Team." chart is a horizontal bar chart showing the number of matches won by various teams. The "Top Venues." chart is a horizontal bar chart showing the number of matches played at different venues. The "Add Set Action" dialog box is open, showing the configuration for a new set action. The dialog has the following fields and options:

- Name:** Update Selected Team Set
- Source Sheets:** Dashboard 1 (selected), Matches Won by Team. (checked), Top Venues. (unchecked), Toss Decision Impact. (unchecked)
- Run action on:** Select (selected), Hover, Menu, Single-select only
- Target Set:** Selected Teams Set.
- Running the action will:** Assign values to set (selected), Add values to set, Remove values from set
- Clearing the selection will:** Keep set values, Add all values to set, Remove all values from set (selected)

The dialog box has "Cancel" and "OK" buttons at the bottom right. The background dashboard shows the following data for the "Matches Won by Team." chart:

Team	Matches Won
Sunrisers Hyderabad	7
Royal Challengers B.	5
Rising Pune Supergl..	10
Rajasthan Royals	24
Punjab Kings	12
Pune Warriors	25
Mumbai Indians	23
Lucknow Super Gian..	0

The "Top Venues." chart shows the following data:

Venue	Matches Played
Wankhede Stadium, ...	10
Sawai Mansingh Sta..	10
Rajiv Gandhi Interna..	10
Punjab Cricket Assoc..	10
MA Chidambaram Sta..	10
M Chinnaswamy Sta..	10
Feroz Shah Kotla	10
Eden Gardens	10
Dubai International ..	10

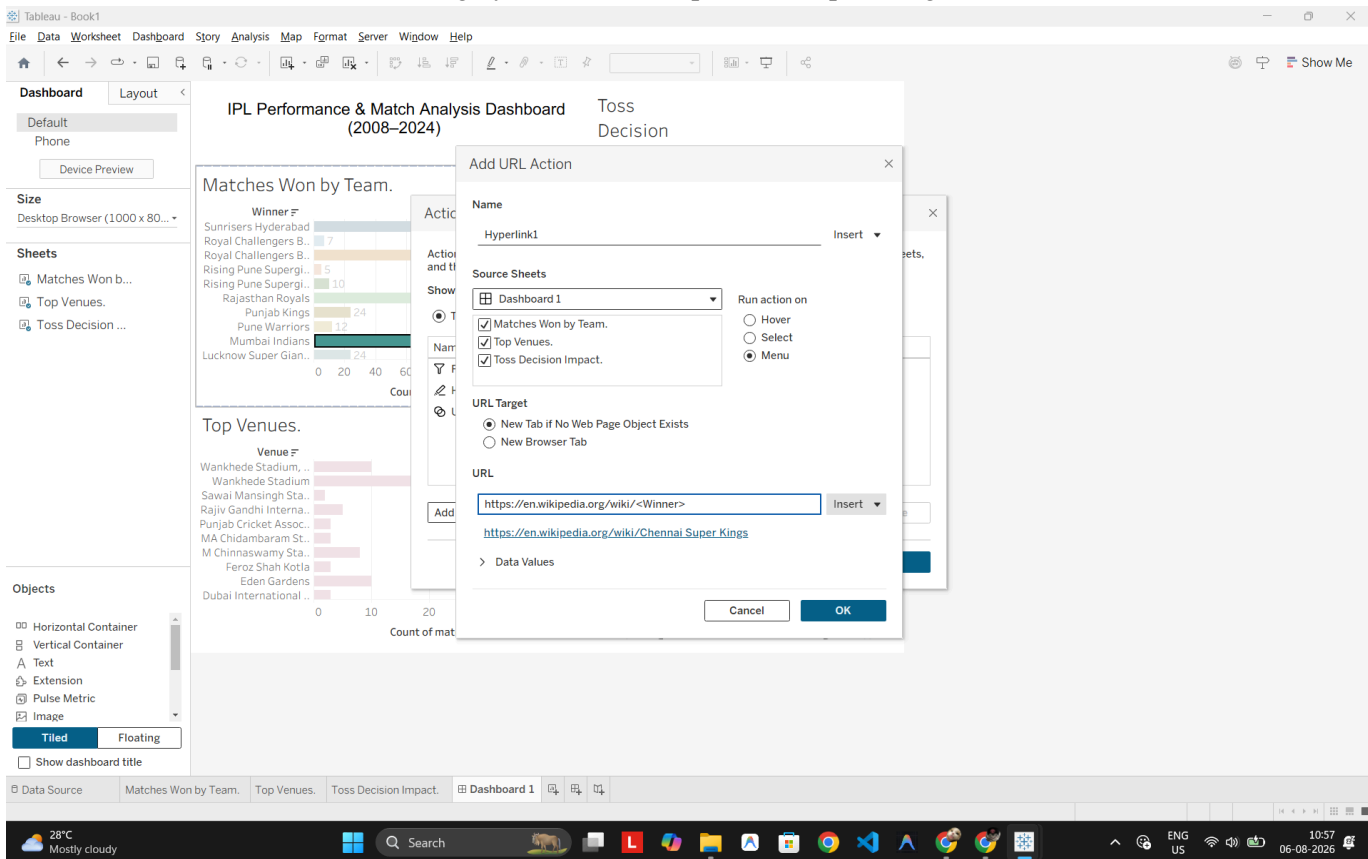

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

1. Add the Dashboard Action:

1. Go to the top menu: Dashboard > Actions... 2. Click Add Action > select Go to URL...

3. Configure the URL Action:

- o Name: Open Team Wikipedia Page
- o Source Sheets: Select Matches Won by Team
- o Run action on: Menu (This displays a clean clickable hyperlink inside the tooltip when a user clicks a bar, preventing accidental page loads).
- o URL: Paste the following dynamic URL: <https://en.wikipedia.org/wiki/<Winner>>

4. Click OK, then click OK again.

E: Create dynamic dashboards using parameters

Parameters allow users to control what dimensions or measures are shown on a chart. Instead of creating separate sheets for "Wins by Season," "Wins by City," or "Wins by Toss Decision," we will create a single dynamic chart where the user can swap dimensions on the fly using a Parameter.

Step 1: Create a Parameter for Dimension Swapping

1. Go to any worksheet (e.g., Matches Won by Team).
2. At the top of the Data pane on the left, click the small drop-down arrow next to the search bar (or right-click anywhere in the Data pane) and select Create Parameter...

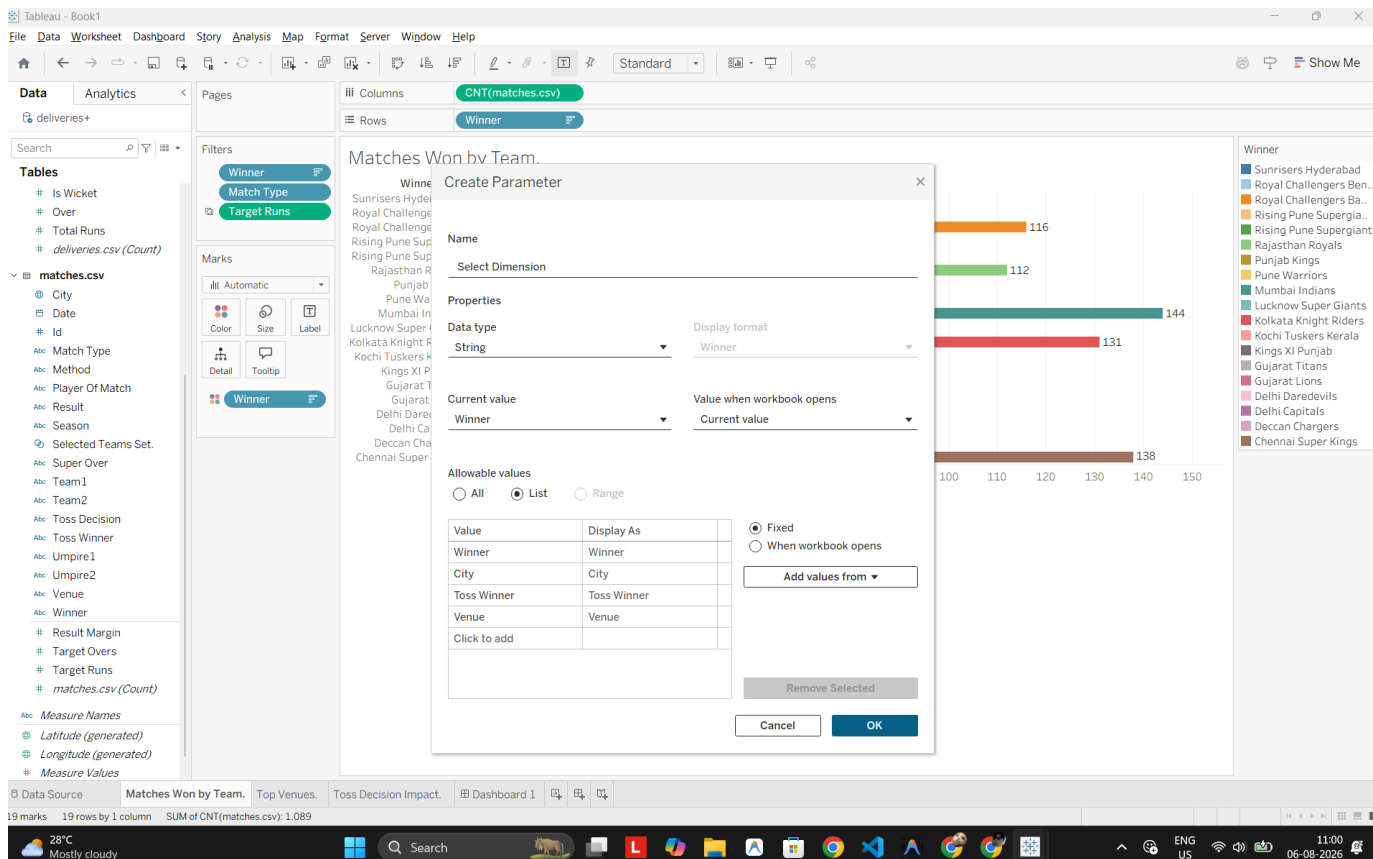

The screenshot shows the Tableau Desktop interface. In the background, a horizontal bar chart titled 'Matches Won by Team' is visible, showing the number of matches won by various teams. The chart has 'Winner' on the x-axis and 'CNT(matches.csv)' on the y-axis. A legend on the right lists teams like Sunrisers Hyderabad, Royal Challengers Bangalore, etc.

In the foreground, the 'Create Parameter' dialog box is open. It has a 'Name' field with the text 'Parameter 1'. The 'Properties' section shows 'Data type' set to 'Float' and 'Display format' set to '1'. The 'Current value' is set to '1' and 'Value when workbook opens' is set to 'Current value'. The 'Allowable values' section has three radio buttons: 'All' (selected), 'List', and 'Range'. The 'OK' button is highlighted in blue.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

3. Configure the parameter options:

- o Name: Select Dimension
- o Data type: String
- o Allowable values: List
- o List of values: Add the following exact names in the Value column:
 - 🏠 Winner
 - 🏠 City
 - 🏠 Toss Winner
 - 🏠 Venue

4. Click OK.

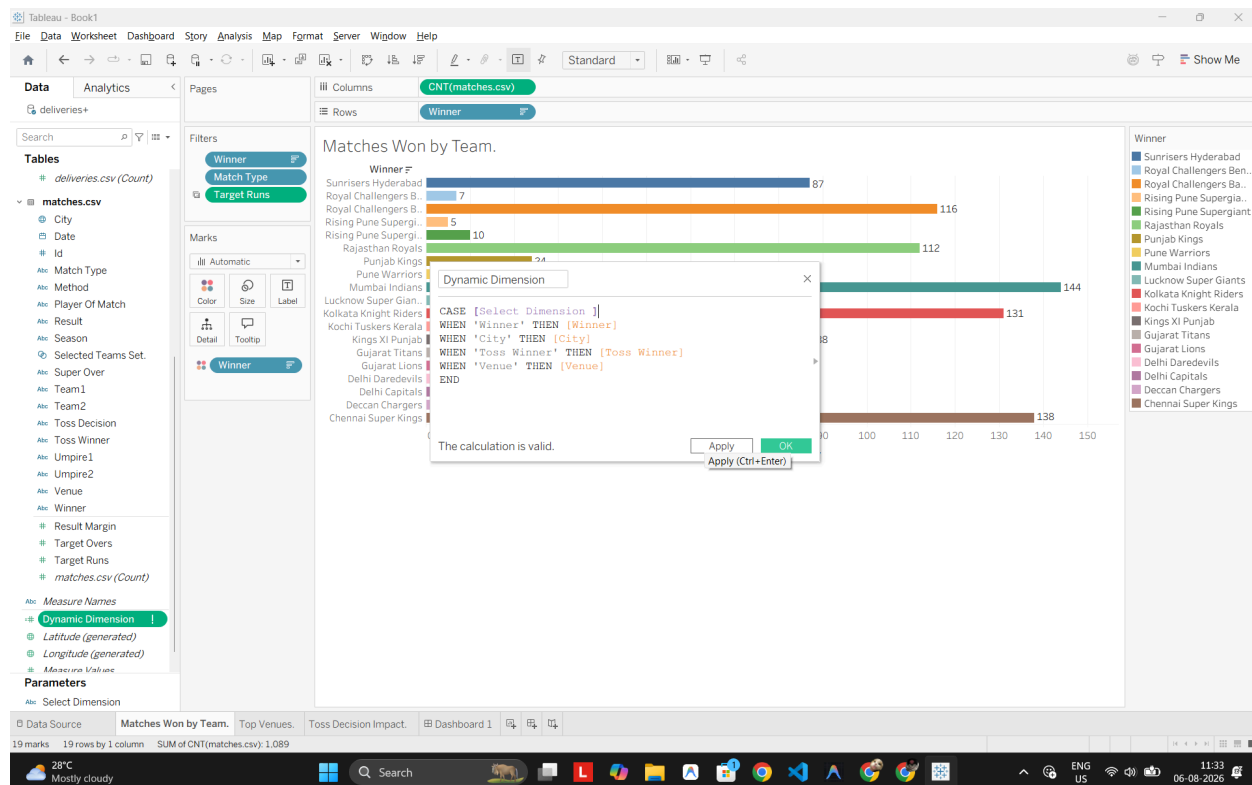

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

Step 2: Create a Calculated Field to Link the Parameter

A parameter doesn't do anything on its own, we need a calculated field to tell Tableau how to respond when the parameter value changes.

1. Right-click in the Data pane ☰ Create Calculated Field...
2. Name the field: Dynamic Dimension
3. Enter the following formula:

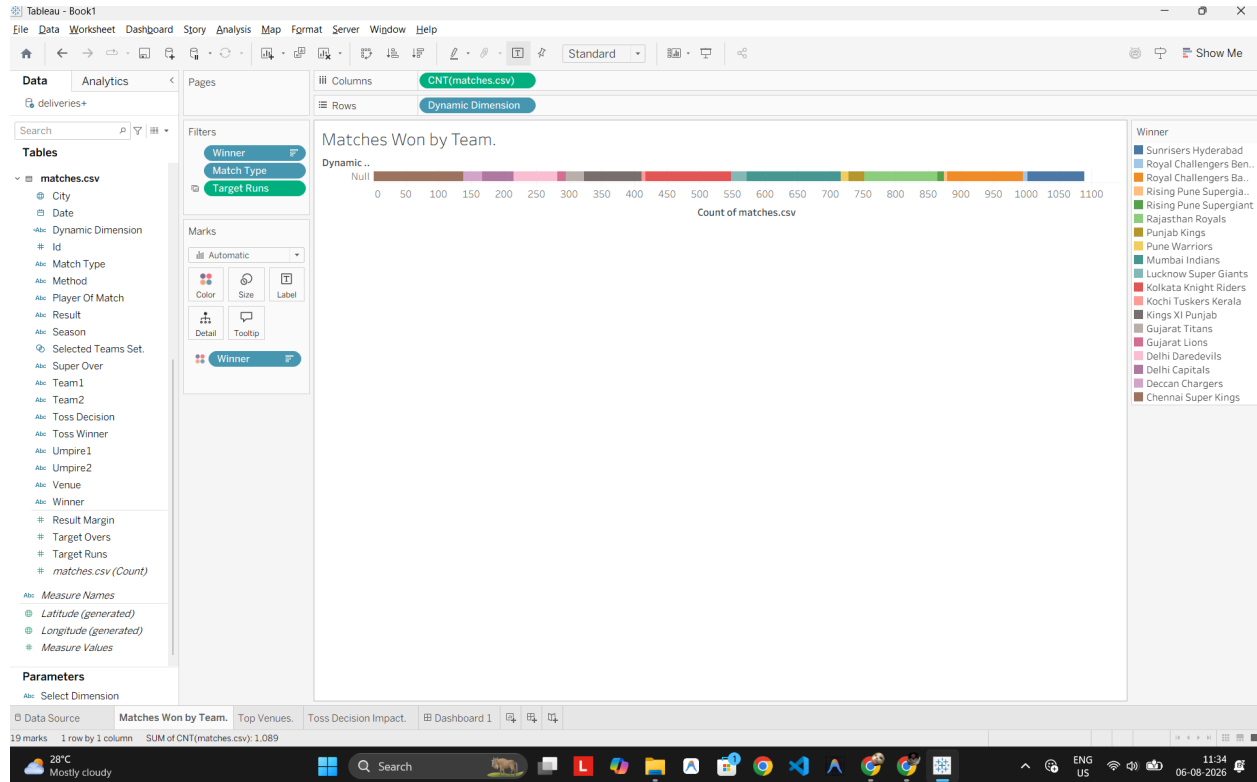

```
CASE [Select Dimension]
WHEN 'Winner' THEN [Winner]
WHEN 'City' THEN [City]
WHEN 'Toss Winner' THEN [Toss Winner]
WHEN 'Venue' THEN [Venue]
END
```

4. Click OK.

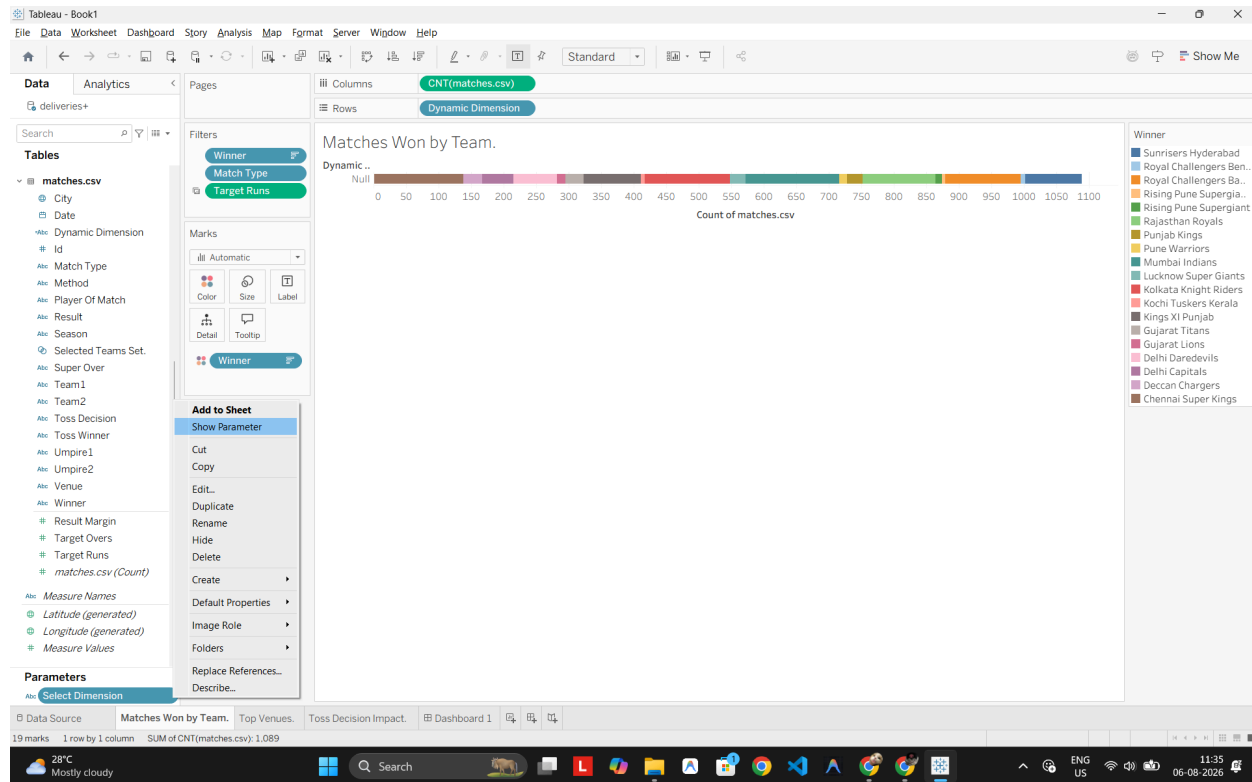

Step 3: Replace the Fixed Field with the Dynamic Field

1. On your Matches Won by Team sheet, locate the field currently on the Rows shelf (e.g., Winner).
2. Drag Dynamic Dimension from the Data pane and drop it directly over Winner on the Rows shelf to swap them.

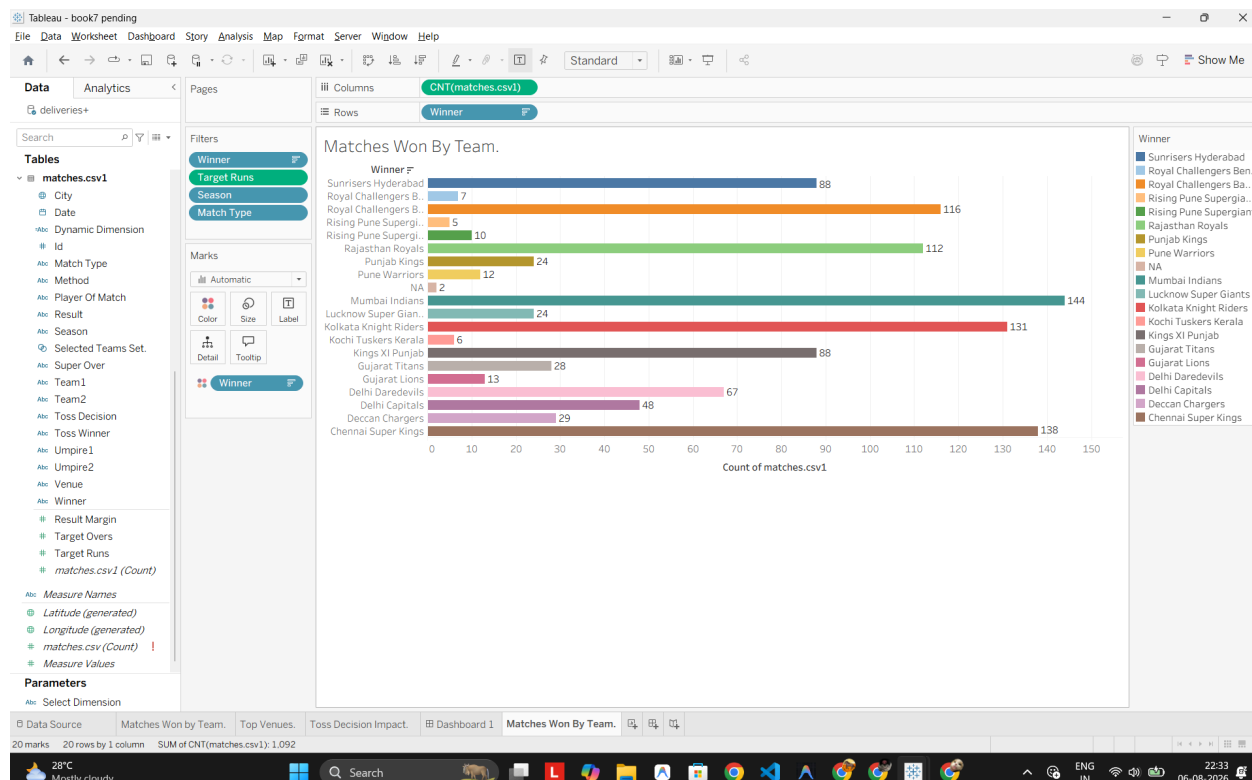

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

3. In the Data pane under Parameters, right-click Select Dimension and check Show Parameter.

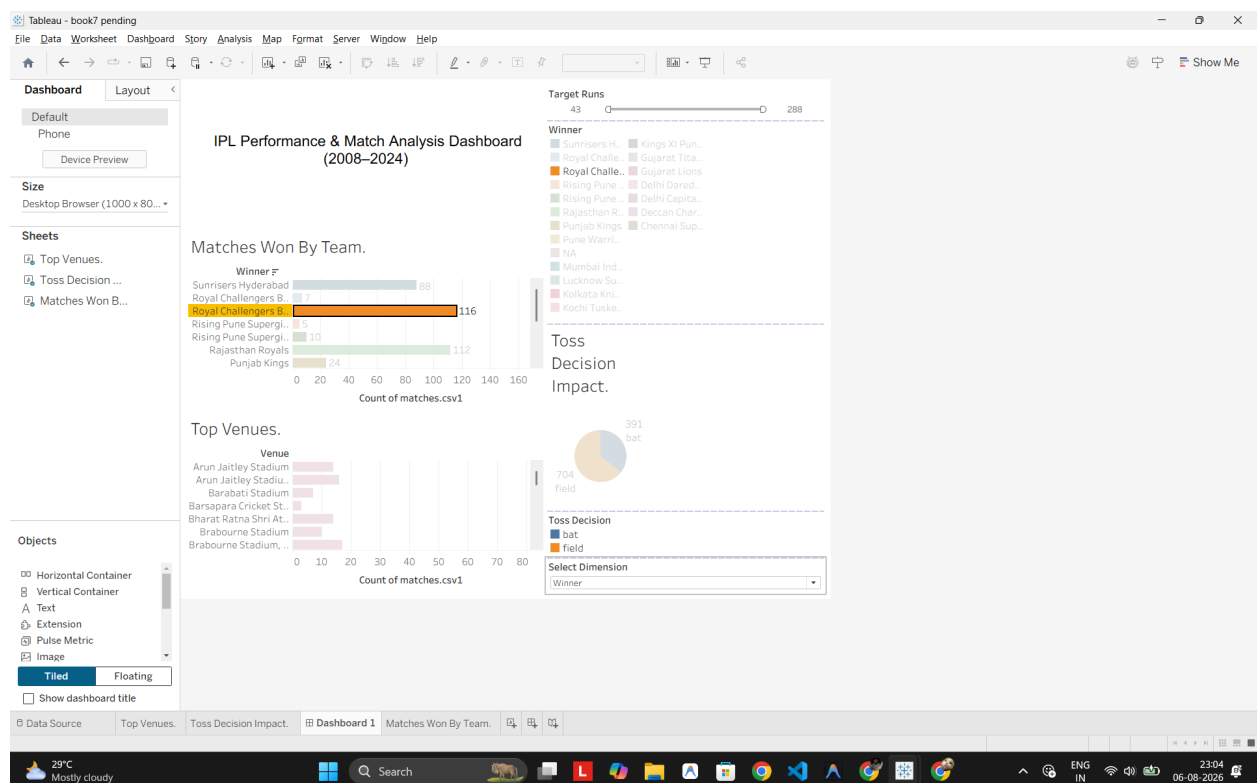

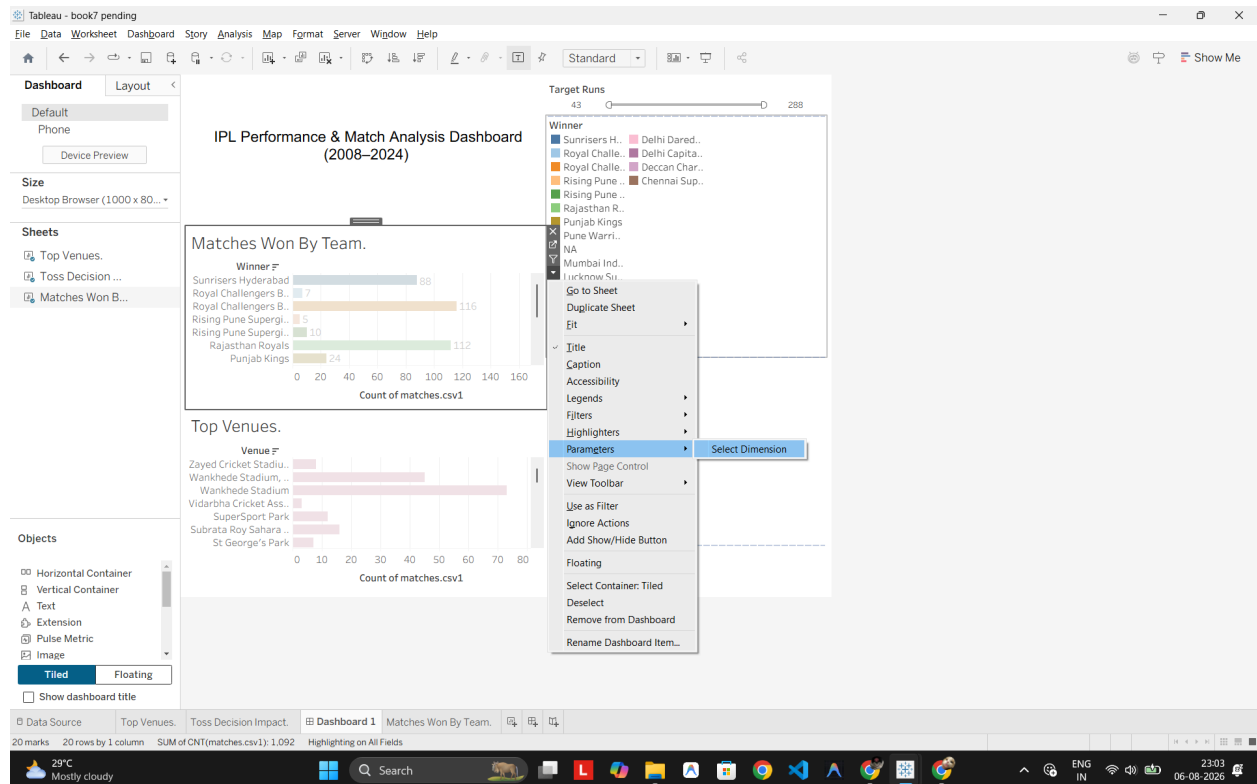

4. Test changing the parameter selection on the right panel, you'll see the chart instantly switch between listing Teams, Cities, Toss Winners, and Venues!

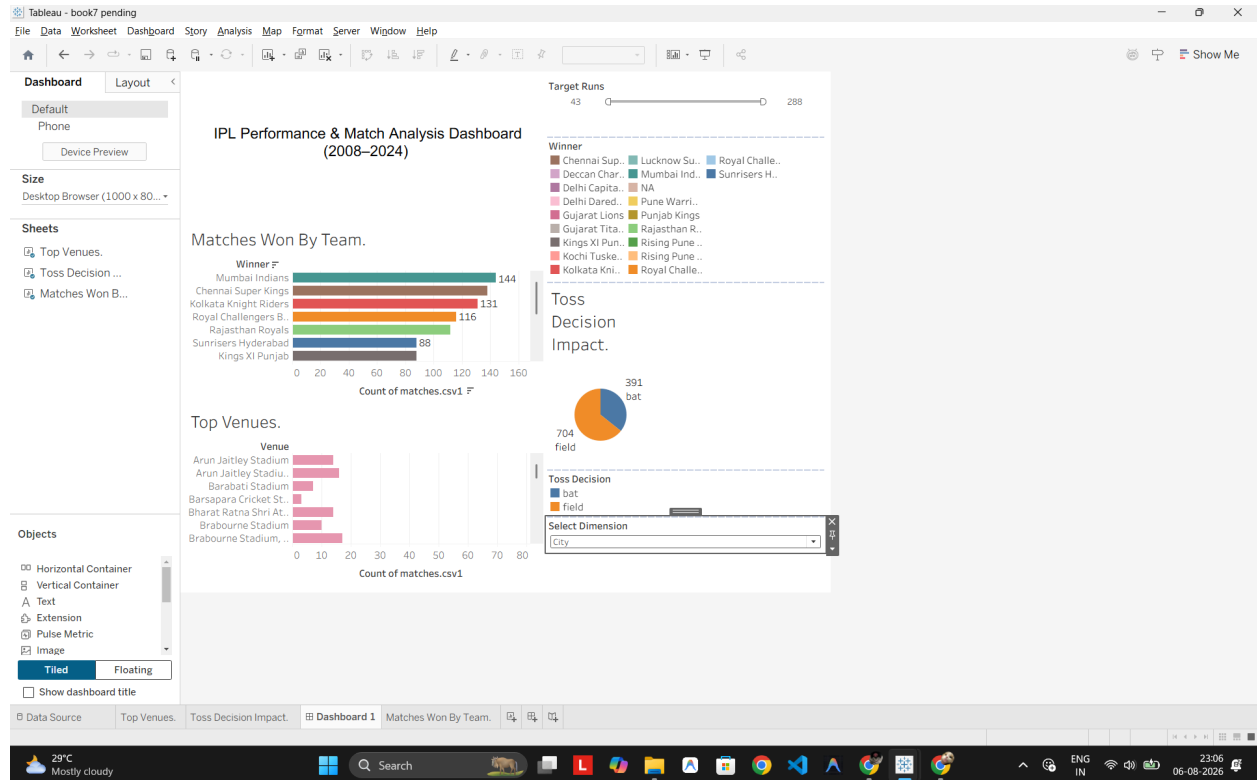

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

Step 4: Display the Parameter Control on the Dashboard

1. Switch back to your main Dashboard tab.
2. Select the dynamic chart box.
3. Click the More Options drop-down arrow in the top right corner of the chart outline box.
4. Go to Parameters  select Select Dimension.

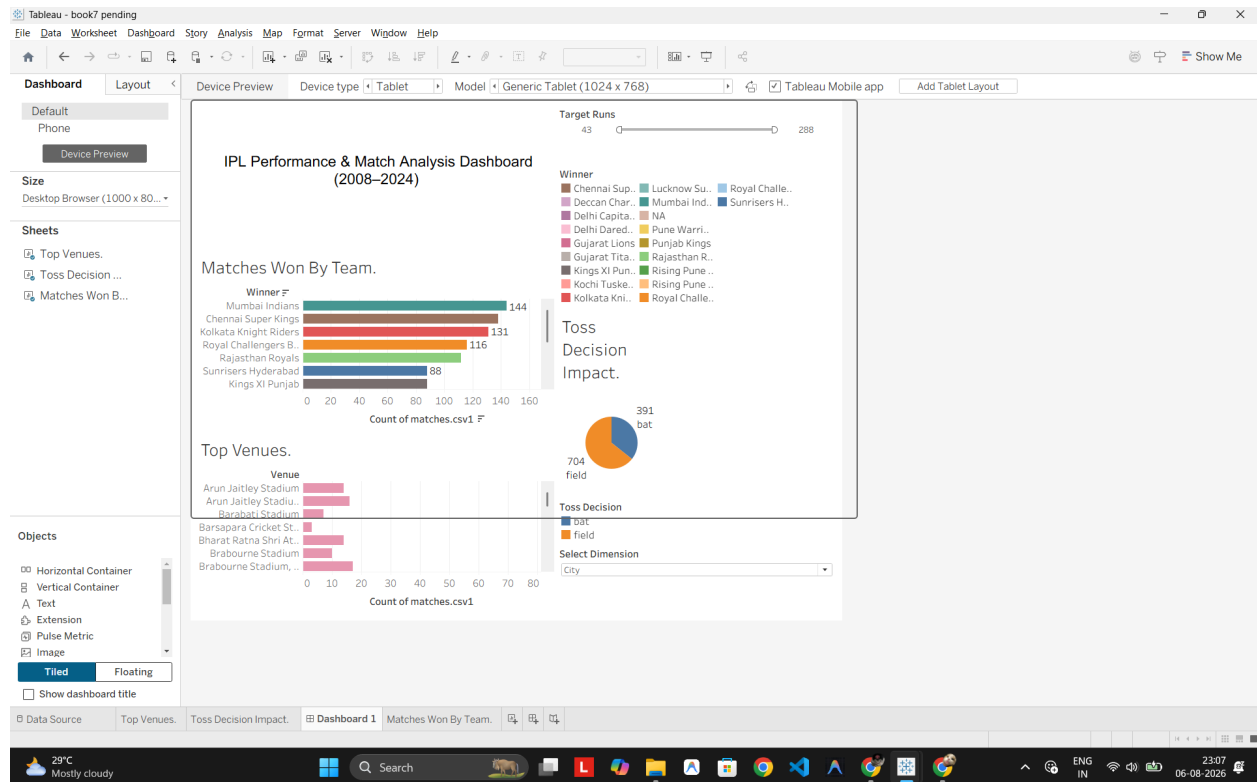

5. Position the new parameter control cleanly alongside your existing filters on the right sidebar.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

Step 1: Open the Device Designer Panel

1. Switch to your main Dashboard tab.
2. In the top-left Dashboard pane, click the Device Preview button.
3. A device preview frame and toolbar will appear across the top of your dashboard canvas, showing how your layout looks on different screens.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

Step 2: Add a Phone Layout

1. In the top device preview bar, select Device type: ☒ Phone.
2. Click the Add Phone Layout button on the right side of the preview bar.
3. You will now see a new sub-tab named Phone appear under the Dashboard panel on the left.

The screenshot shows the Tableau Desktop interface. The top bar includes the 'Device Preview' section with 'Phone' selected. The left sidebar shows the 'Dashboard' panel with a 'Phone' sub-tab. The main view displays a dashboard titled 'IPL Performance & Match Analysis Dashboard (2008-202..)' with three visualizations:

- Matches Won By Team:** A horizontal bar chart showing the number of matches won by each team. The data is as follows:

Team	Matches Won
Mumbai Indians	144
Chennai Super Kings	131
Kolkata Knight Riders	112
Royal Challengers B.	88
Rajasthan Royals	88
Sunrisers Hyderabad	88
Kings XI Punjab	88
- Toss Decision Impact:** A pie chart showing the distribution of toss decisions. The data is as follows:

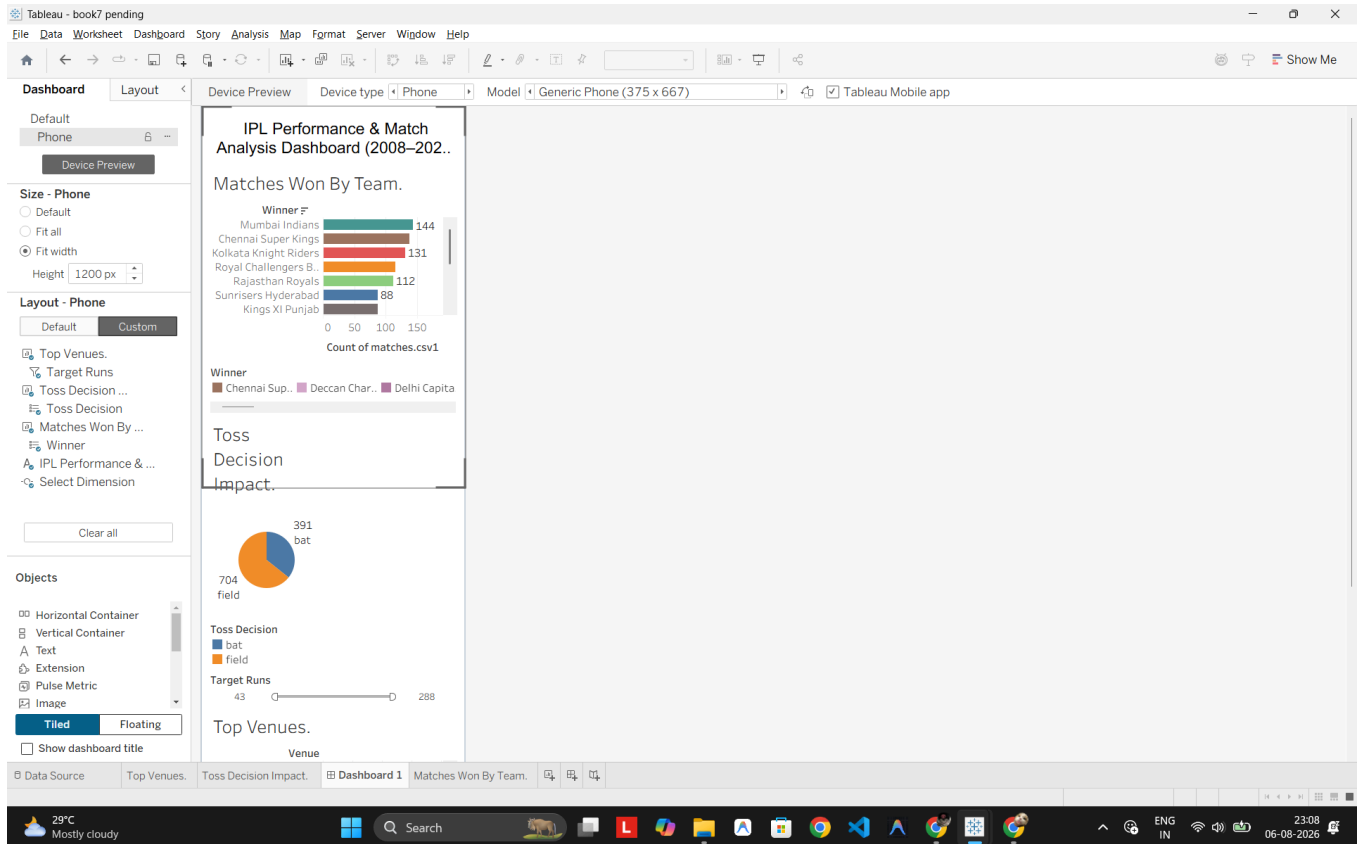

Decision	Count
bat	391
field	704
- Top Venues:** A line chart showing the number of matches played at different venues. The data is as follows:

Venue	Matches
Chennai Sup..	43
Deccan Char..	288
Delhi Capita	288

Step 3: Customize the Phone Layout for Vertical Scrolling

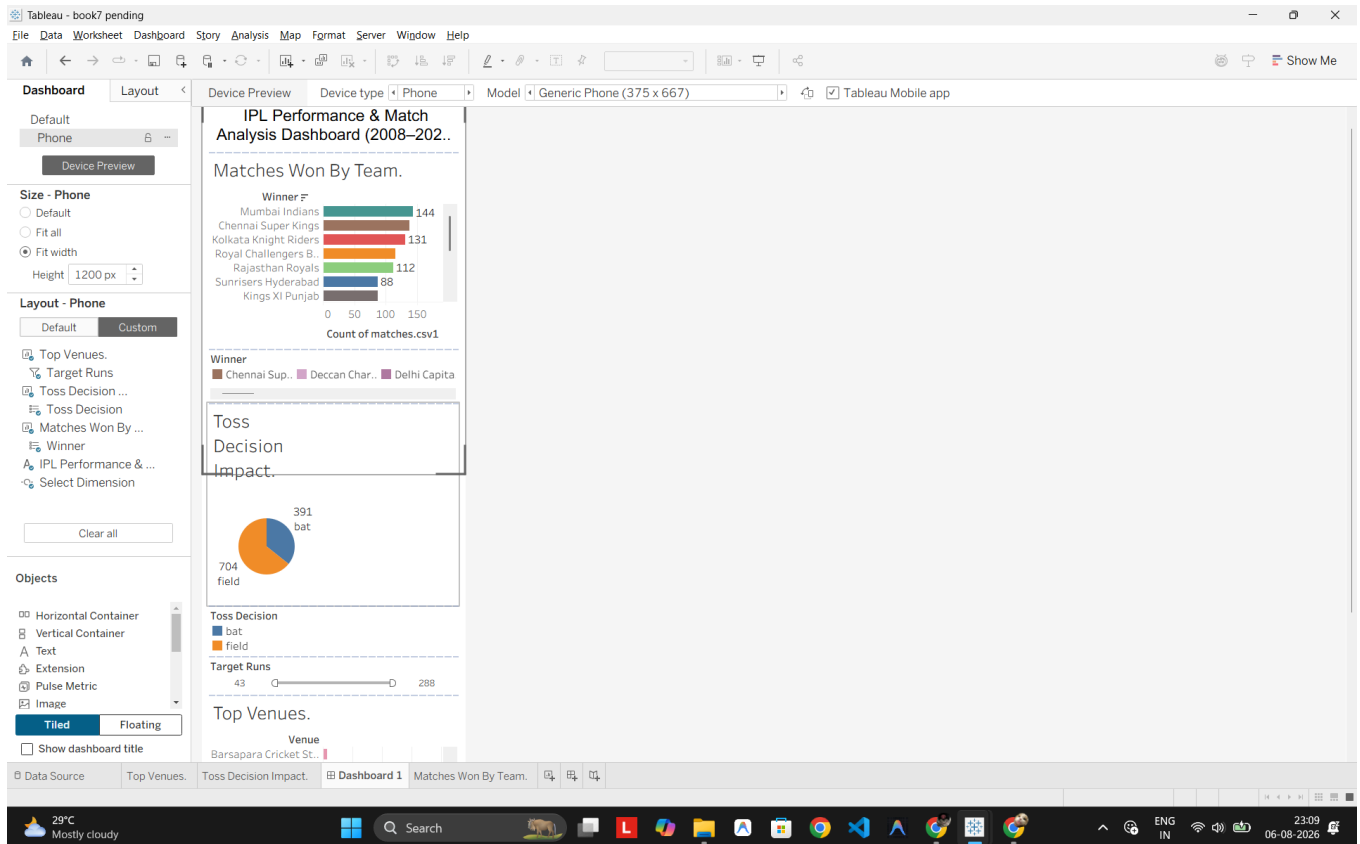

Mobile screens require a vertical stack rather than side-by-side tiled views:

1. In the left panel under the Phone layout section, change Layout from Default to Custom (this allows you to edit the phone layout without affecting your desktop view).

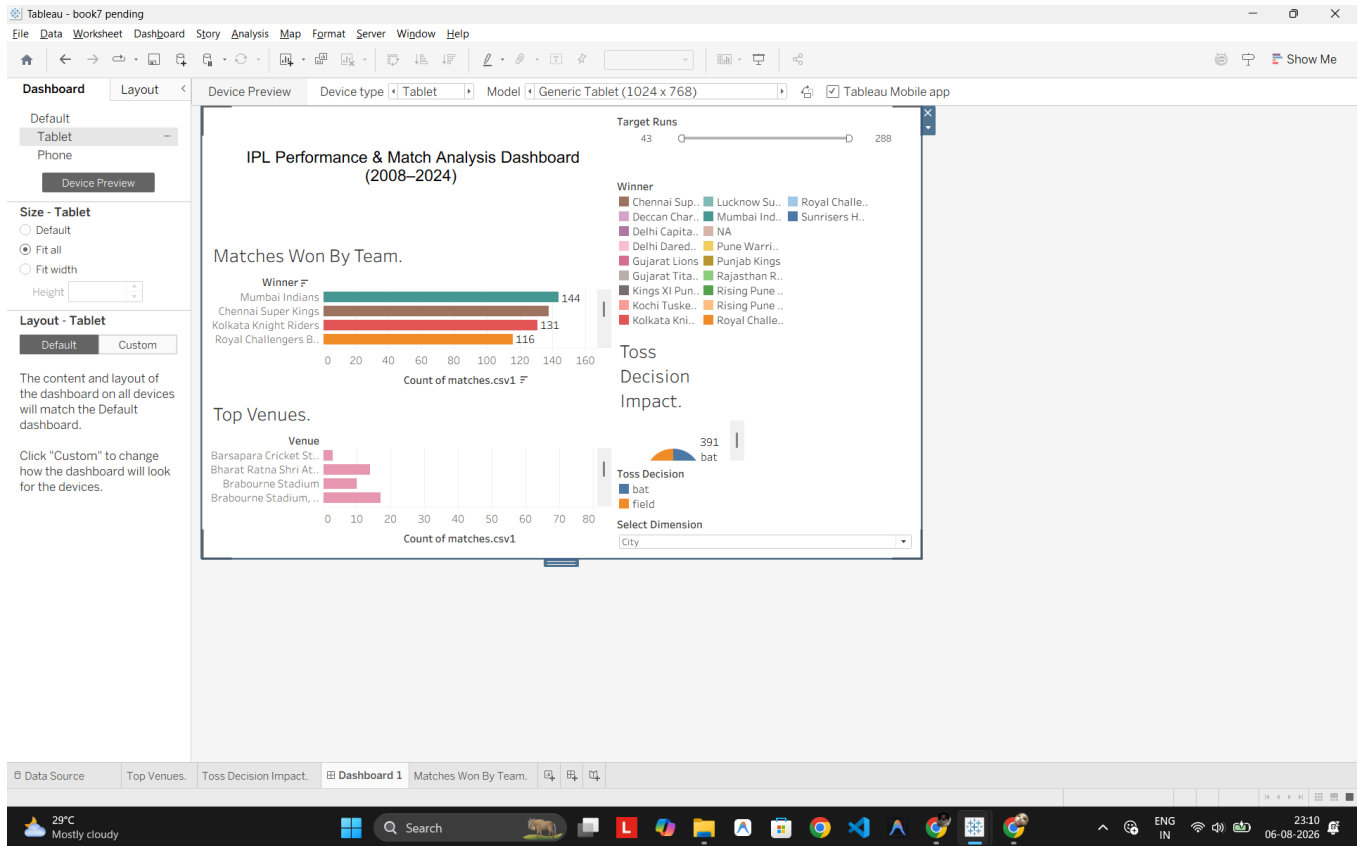

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

2. Tableau will automatically generate a single-column stack. Arrange the items vertically in logical order:
 - o Title & Global Filters (Season, Dynamic Dimension parameter) at the top.
 - o Matches Won by Team (Primary high-level chart).
 - o Top Venues chart below it.
 - o Toss Decision Impact pie chart at the bottom.
3. Hide secondary elements if needed: Right-click any non-essential filter or legend container in the phone tree view and select Remove from Layout (this removes it only from the phone screen, keeping your mobile dashboard clean and clutter-free).

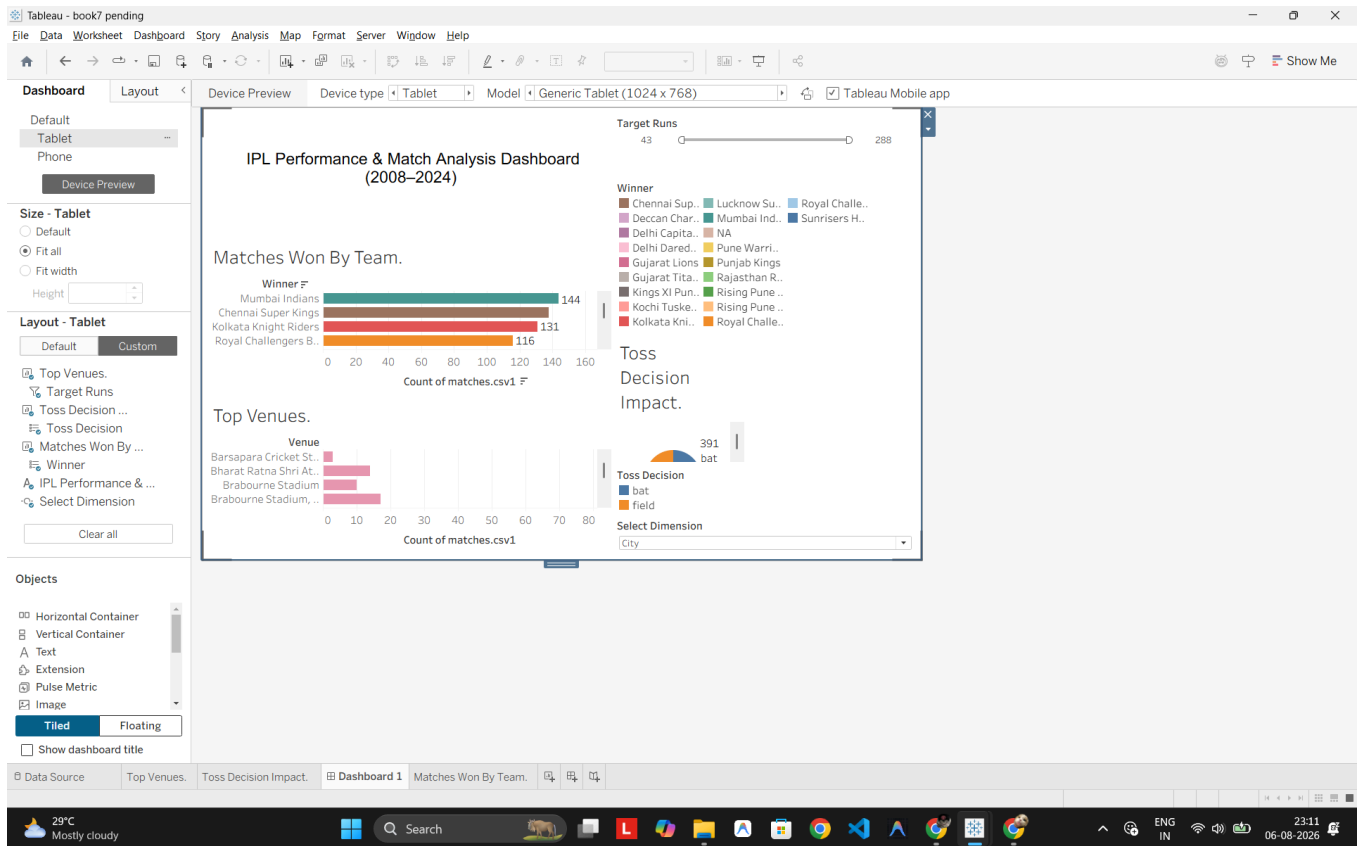

Step 4: Add a Tablet Layout (Optional)

1. Change Device type in the top bar to Tablet.
2. Click Add Tablet Layout.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

3. Set the layout to Custom and adjust the grid to a 2x2 matrix so all key metrics fit comfortably on an iPad/tablet screen size.

4. Click Close on the top Device Preview toolbar when done.

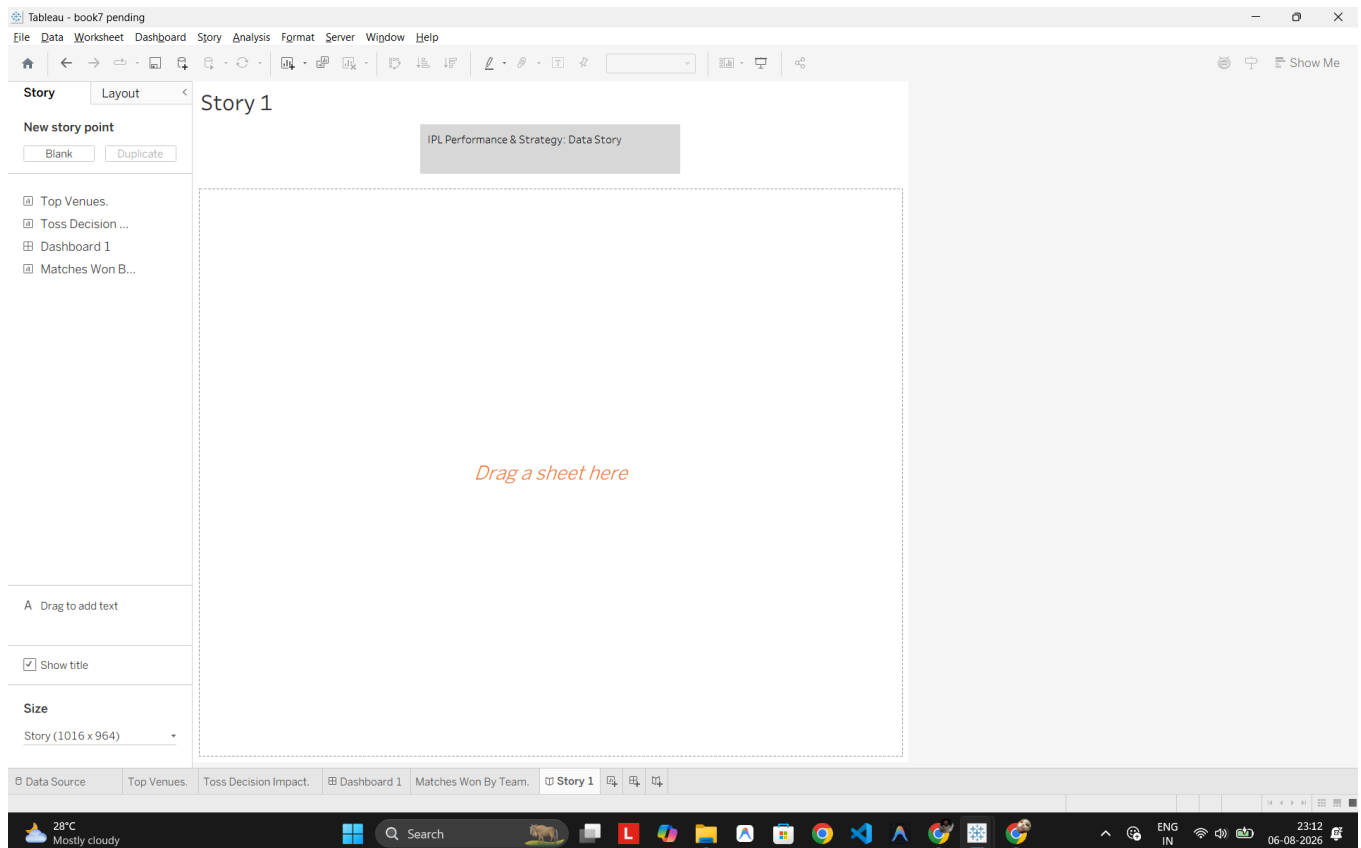

G: Build a complete data story using Story feature

Step 1: Create a New Story Workspace

1. At the bottom of your Tableau workspace (where your Sheet and Dashboard tabs are), click the New Story tab icon (the notebook icon with a plus sign at the far right).
2. Double-click the title heading at the top of the canvas and rename your story to:

IPL Performance & Strategy: Data Story

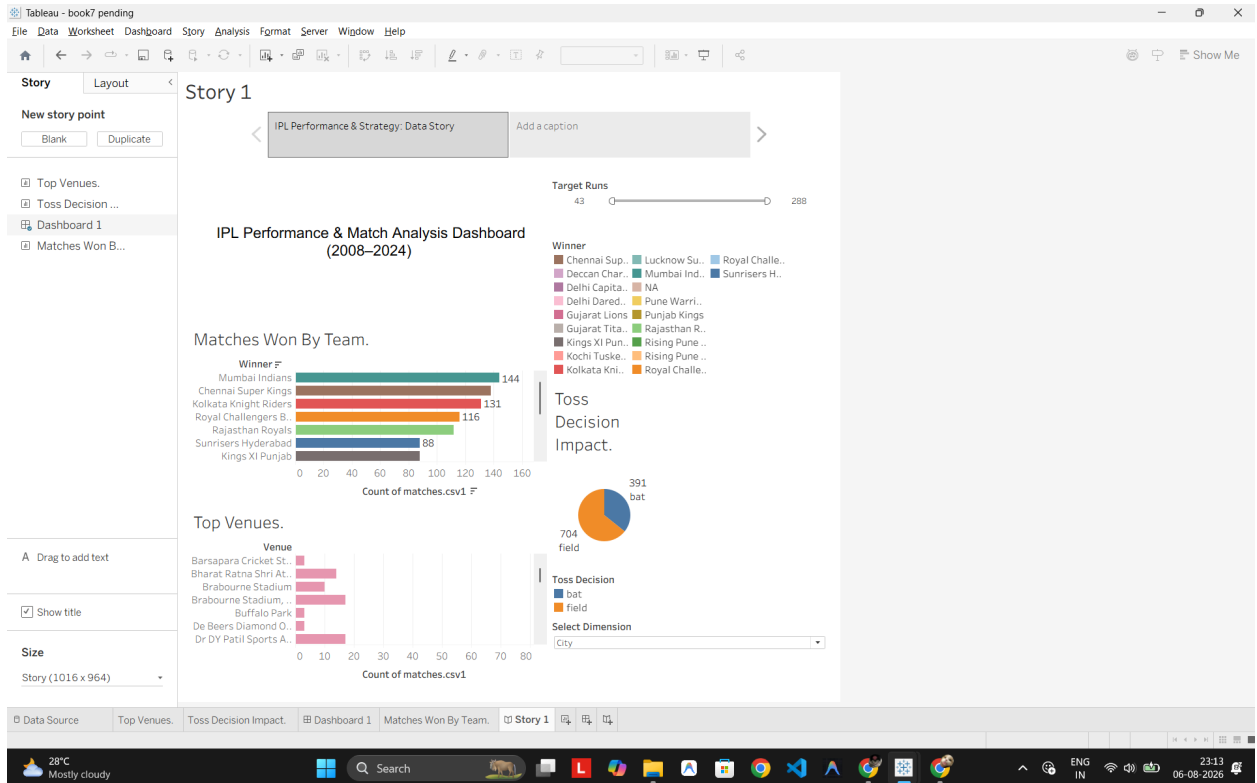

3. Set the Story size in the left sidebar under Size to Automatic or Caption Style so it fits your screen nicely.

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

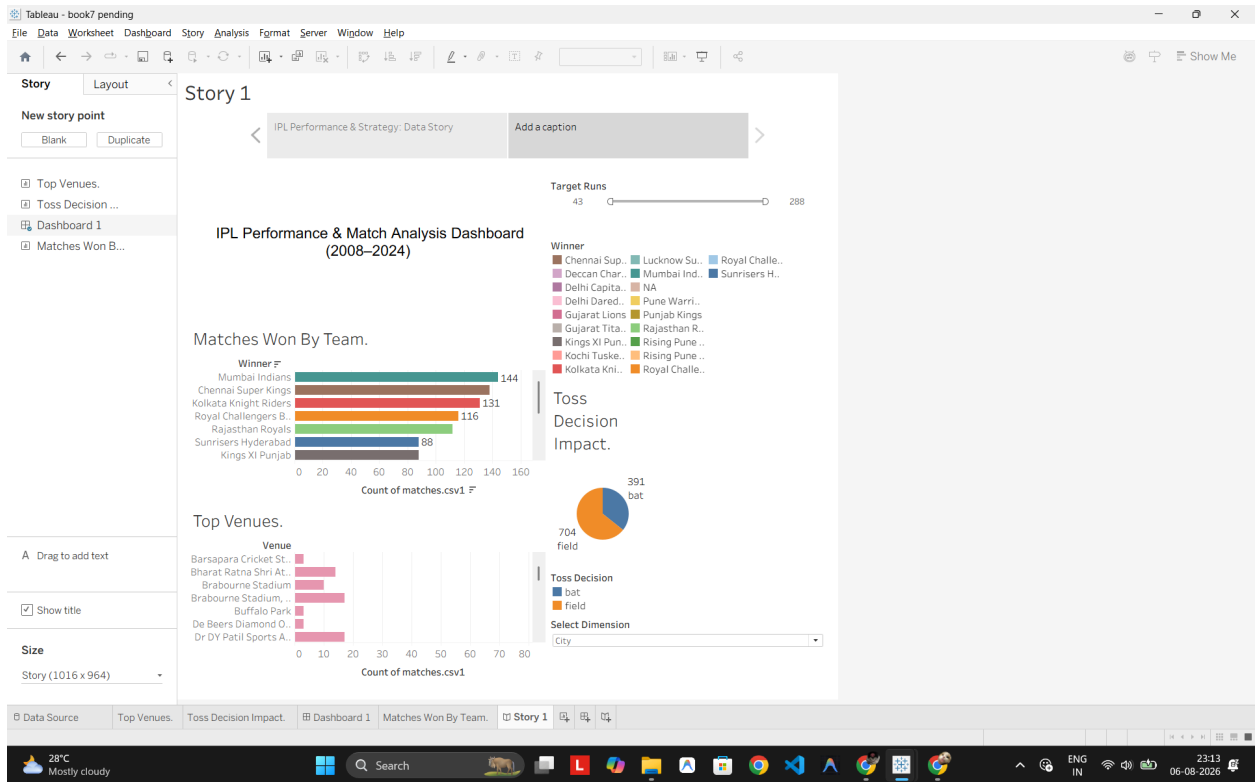

Step 3: Story Point 2 — Venue Analysis & Scoring Trends

1. Click Blank under the New Story Point section on the left sidebar to add a second slide.

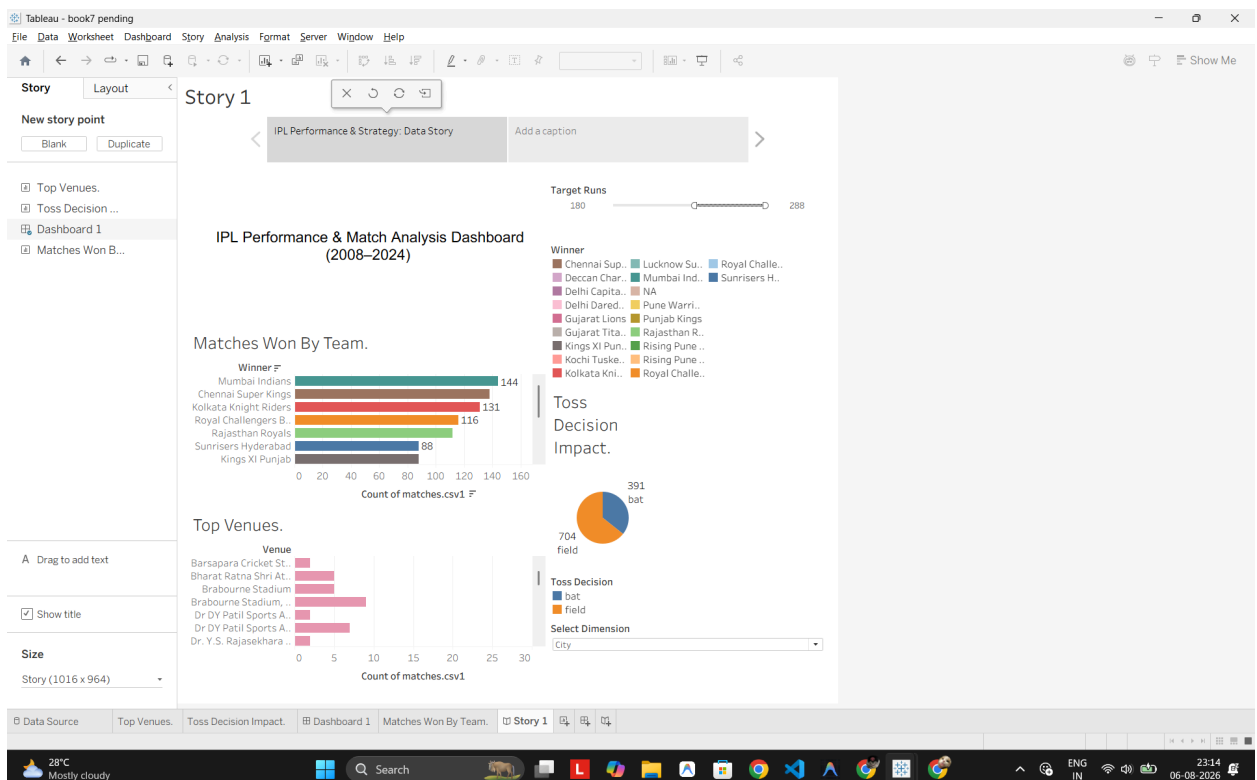

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

2. Drag your IPL Dashboard onto the canvas again.

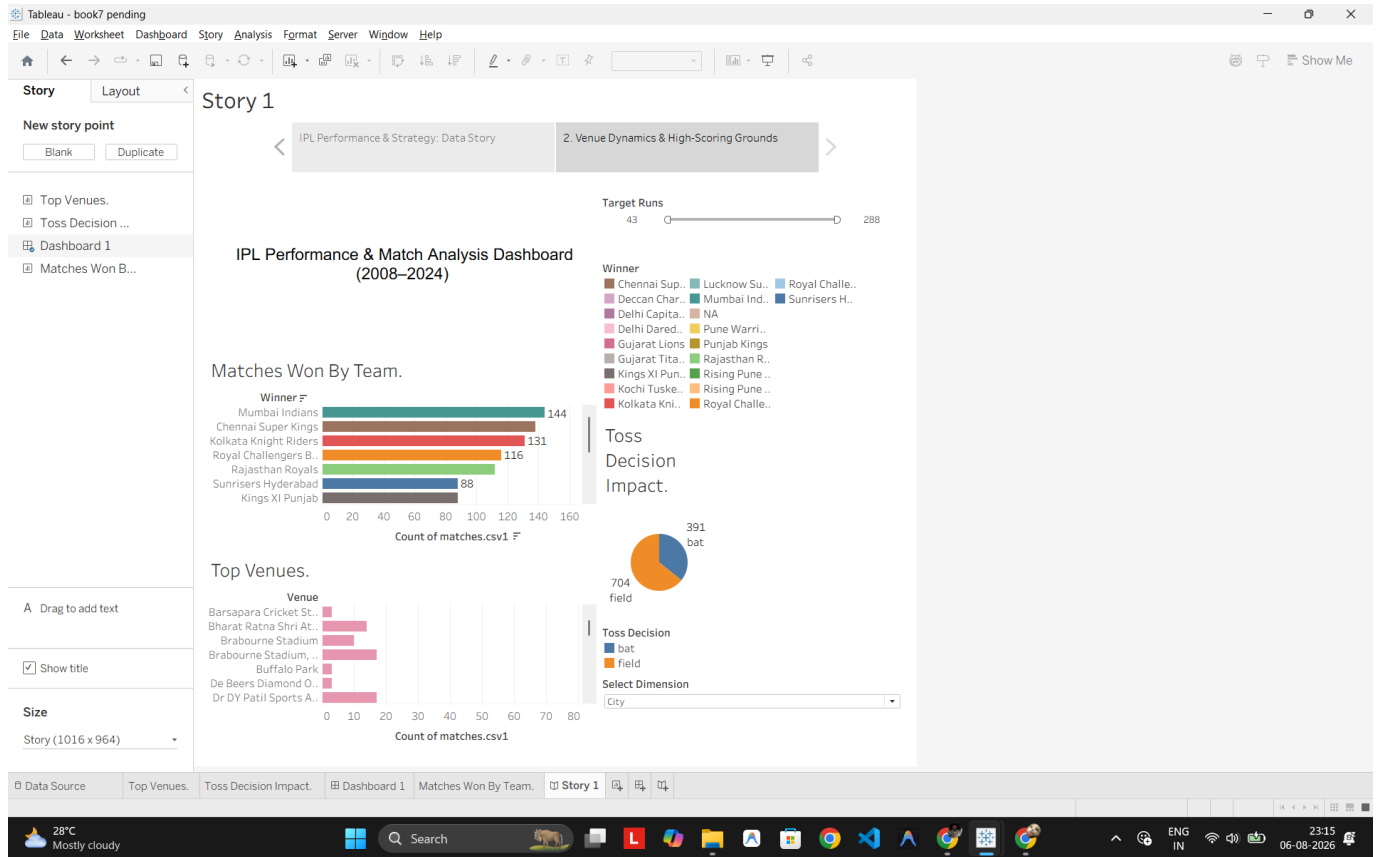

3. In this slide, use your new Select Dimension parameter dropdown to change the primary chart view to Venue, and set your Target Runs slider to focus on high-scoring matches (180+ runs).

4. Update the top caption box for this point to:

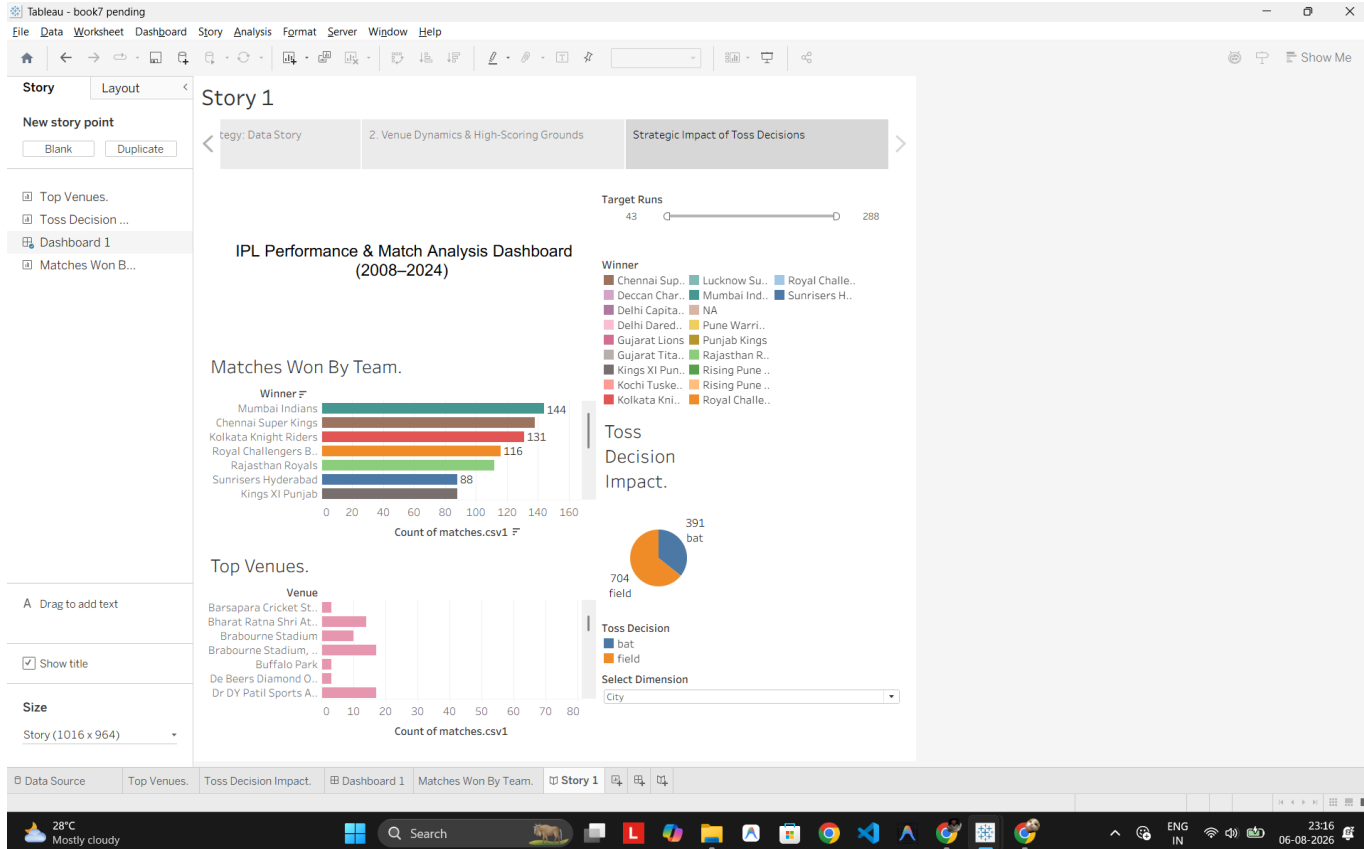

2. Venue Dynamics & High-Scoring Grounds

Step 4: Story Point 3 — The Impact of the Toss

1. Click Blank to add a third story point.
2. Drag the Toss Decision Impact worksheet (or the full dashboard) onto this slide.
3. Use the Season or City filter controls to highlight how winning the toss and choosing to bat vs. field impacts match outcomes in specific conditions.
4. Update the caption to:

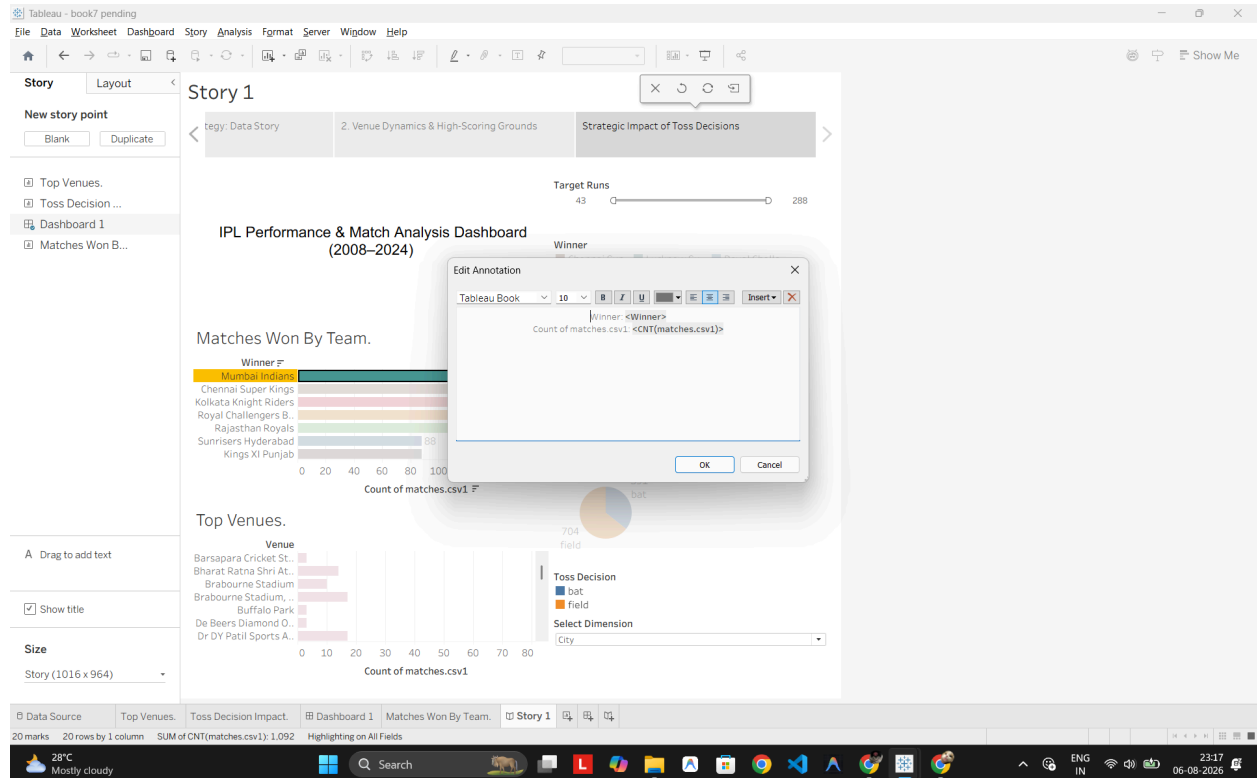

3. Strategic Impact of Toss Decisions

Step 5: Add Callout Annotations for Key Takeaways

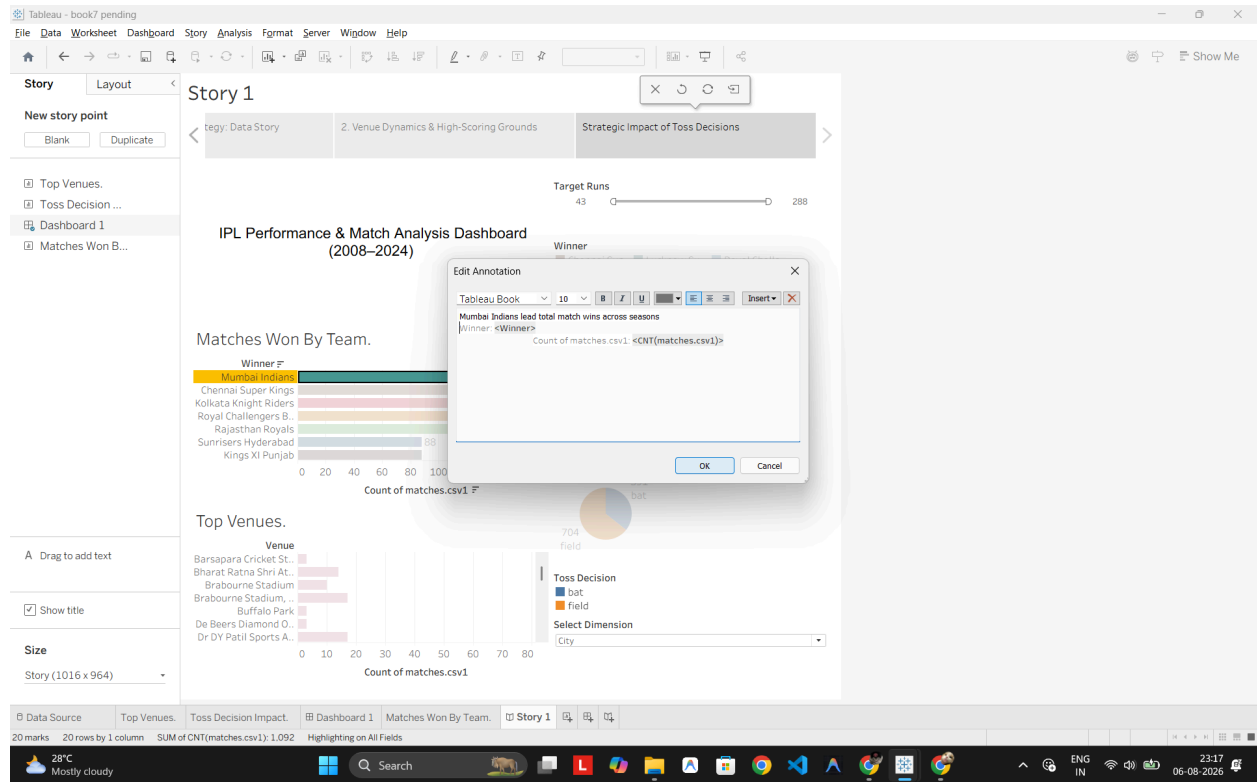

To make your story presentation self-explanatory for stakeholders:

1. Go to Story Point 1 or Story Point 2.
2. Right-click a notable mark (e.g., the top team bar for Mumbai Indians or M. Chinnaswamy Stadium).
3. Select Annotate --> Mark... (or Point...).

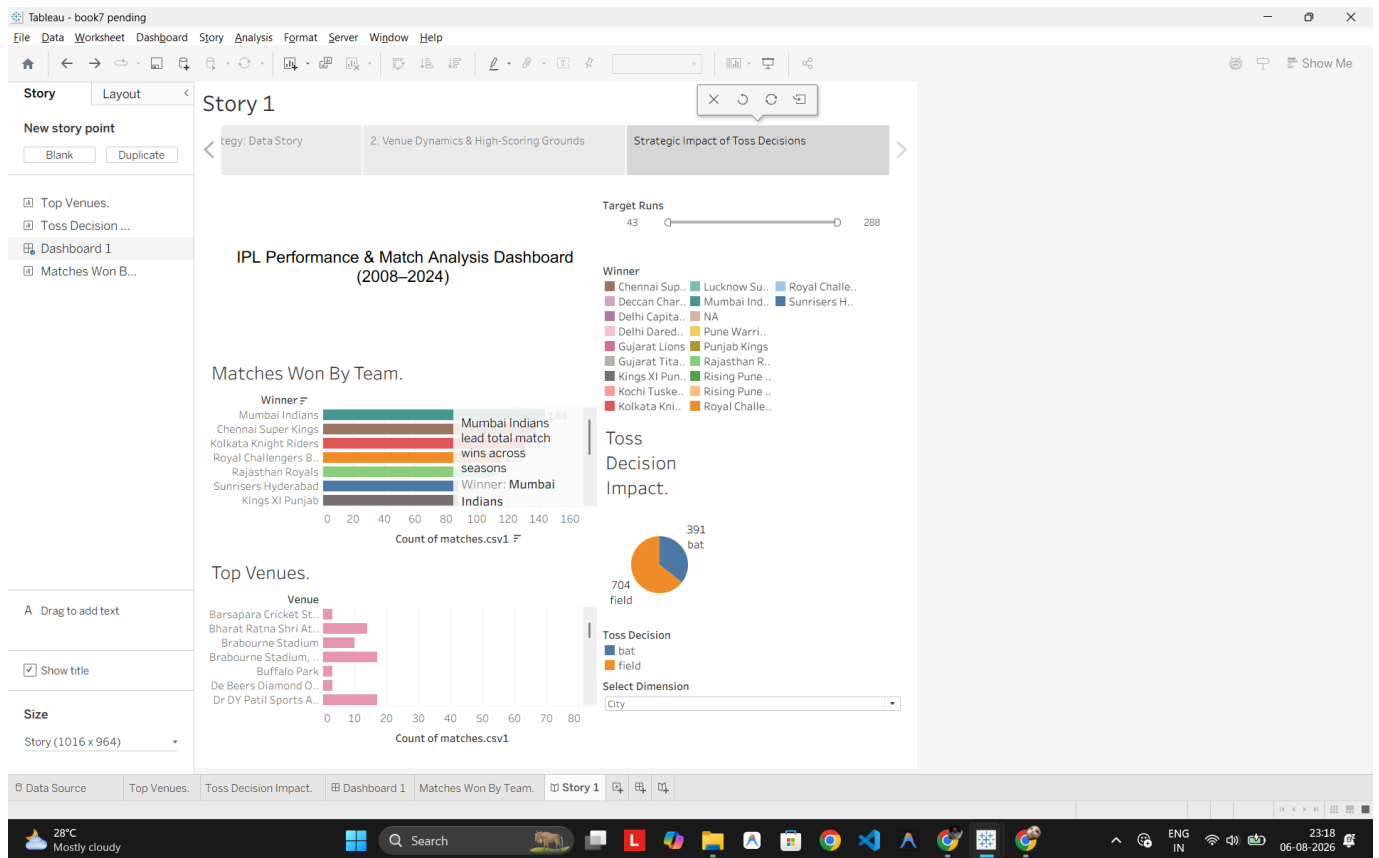

Sheth L.U.J & Sir M.V College
Subject: Data Visualization with Power BI and Tableau

4. Enter a succinct takeaway (e.g., "Mumbai Indians lead total match wins across seasons").

Sheth L.U.J & Sir M.V College
Subject:Data Visualization with Power BI and Tableau

5. Drag the callout text box to place it clearly beside the visual element.

Step 6: Presentation Mode Walkthrough

1. Press F5 (or click the Presentation Mode icon in the top toolbar) to view your story full-screen.
2. Click through the story navigator buttons at the top to ensure each slide maintains its customized filter state and annotations while preserving full interactivity.
